## Major Completion Map

**TO PREPARE FOR FIRST SEMESTER:** The curriculum for this major assumes students enter college prepared to take calculus. Students are required to participate in the Professional Learning Institute (PLI) program as a requirement for graduation. The program consists of
eleven PLI workshops distributed by focus areas as follows: Global and Cultural Diversity (2 workshops), Innovation (2 workshops), Leadership (2 workshops), Civic and Public Engagement (2 workshops), and Ethics (3 workshops). Each workshop is between 1-2 hours long and no outside preparation is required to attend any of the workshops. Attendance at the required workshops may be spread over the student’s four-year program.

In order to maintain professional standards required of practicing engineers, the Department of Electrical and Computer Engineering requires a cumulative grade point average of at least 2.000 in electrical engineering courses as a graduation requirement. It is the responsibility of any student who fails to maintain a 2.000 average to work with his or her adviser to correct grade point deficiencies. In addition, it is required that students retake any electrical engineering course at the 300 level or below in which they receive a grade below C.

Graduate Certificate in Computer Systems Engineering

The Computer Systems Engineering graduate certificate is designed for students and professionals seeking knowledge and skills in state-of-the-art parallel hardware architectures, parallel software programming, algorithms, and networking technologies. Students stay current on rapidly advancing technology and learn to problem solve for future challenges.

Effective Fall 2016

Additional coursework may be required due to prerequisites.

CS 545 Machine Learning
CS 556 Computer Security
CS 575 Parallel Processing
ECE 554 Computer Architecture
ECE 561/CS 561 Hardware/Software Design of Embedded Systems

Program Total Credits: 11-12

*This certificate may have courses in common with other graduate certificates. A student may earn more than one certificate, but a given course may be counted only in one certificate.

1 At least one ECE course is required.

Graduate Certificate in Embedded Systems

The Embedded Systems graduate certificate provides an introduction to embedded systems, including hardware design and software engineering principles. Students learn to apply electrical engineering, computer engineering, and computer science principles in real-world embedded platforms.

Effective Fall 2016

Additional coursework may be required due to prerequisites.
Graduate Certificate in Power and Energy

Students pursuing the Power and Energy graduate certificate gain skills to create modern solutions for the world’s mounting energy needs. With the rise of electric vehicles, more ubiquitous personal technologies, and demand for renewable energy sources, the electric grid as it stands is not equipped to meet 21st century requirements. Much of the power and energy workforce will be retiring in the coming years; as such, the time is ripe to update your knowledge to be more competitive among the next generation of professionals, and help usher in a modern, secure energy smart grid.

Effective Fall 2016

Additional coursework may be required due to prerequisites.

Major in Mechanical Engineering

Is making a difference important to you? Would you enjoy the challenge of inventing sustainable energy devices, leading computer-aided product design, or biomedical research? Does creating new designs for the hybrid electric vehicle industry, or new airplanes in the fields of aeronautics and aerospace sound interesting? Would designing or doing research and development in a wide range of industrial and governmental enterprises sound appealing? Does studying thermal sciences and the integration of electronic and mechanical devices interest you? Do you like putting ideas and designs to work? Are you interested in collaborating and working in teams with others? If your answer to any of these questions is “yes,” then a major in Mechanical Engineering may be for you.

Mechanical engineers are creative problem solvers who design, develop, and manufacture the machines and instrumentation that run energy, building, environmental, and transportation systems. Examples include biomedical devices, ground/air/space vehicles, robots, environmental control equipment, and power plants.

In Mechanical Engineering, students take basic science and mathematics courses while beginning their engineering studies in design and computing. A broad spectrum of classes is designed to sharpen problem-solving skills. The senior year focuses on a year-long capstone design course to help students in the transition from college to an engineering career. Students also choose technical electives from the energy, materials, mechanics and controls, thermal sciences, and biomedical engineering areas. Participation in labs provides an active learning environment and further develops design, modeling, and analytical skills.

Mechanical Engineering at CSU is dedicated to graduating ethical mechanical engineers who:

- Make an impact on society's global, grand engineering challenges
- Act as innovative and creative engineering designers who identify, analyze, and solve complex problems
- Function as accomplished thinkers with hands-on practical skills
- Serve as local, regional, and global collaborators and communicators
- Commit to life-long learning

Student Outcomes

Graduates of the undergraduate Mechanical Engineering program will be prepared to:

- Apply knowledge of mathematics, science, and engineering
• Design and conduct experiments, as well as analyze and interpret data
• Design a system, component, or process to meet desired needs within realistic constraints such as economic, environmental, social, political, ethical, health and safety, manufacturability, and sustainability arenas
• Function on multidisciplinary teams
• Identify, formulate, and solve engineering problems
• Model professional and ethical responsibility
• Communicate effectively
• Understand the impact of engineering solutions in a global, economic, environmental, and societal context
• Recognize the need for and engage in life-long learning
• Utilize the techniques, skills, and modern engineering tools necessary for engineering practice

Potential Occupations
Graduates from the Department of Mechanical Engineering are expected to have the fundamental knowledge required for the successful practice of mechanical engineering. CSU engineering graduates are generally well prepared for a professional career with a greater than 90% pass rate on the Fundamentals of Engineering professional examination. Participating in internships, volunteer activities, or cooperative education opportunities is highly recommended to enhance practical training and development. Students who continue on to pursue a graduate education can attain more responsible positions with the possibility of rising to top professional levels.

TO DECLARE MAJOR: Competitive entry controls required and capped enrollment in place. Incoming students please see the Office of Admissions to declare. Current CSU students please see your assigned advisor for information about the waitlist.

TO PREPARE FOR FIRST SEMESTER: The curriculum for this major assumes students enter college prepared to take calculus. Students are required to participate in the Professional Learning Institute (PLI) program as a requirement for graduation. The program consists of eleven PLI workshops distributed by focus areas as follows: Global and Cultural Diversity (2 workshops), Innovation (2 workshops), Leadership (2 workshops), Civic and Public Engagement (2 workshops), and Ethics (3 workshops). Each workshop is between 1#2 hours long and no outside preparation is required to attend any of the workshops. Attendance at the required workshops may be spread over the student’s four-year program.
CO 150 must be completed by the end of Semester 2.

**School of Biomedical Engineering**

Scott Bioengineering Building, Suite 225  
engr.colostate.edu/sbme (http://www.engr.colostate.edu/sbme)  
(970) 491-7157

Professor Stuart Tobet, Director  
Professor Kevin Lear, Associate Director; and Director, Undergraduate Programs

The School of Biomedical Engineering (SBME) stands on a foundation of strong faculty and research programs from four CSU colleges: the Walter Scott, Jr. College of Engineering, and the Colleges of Health and Human Sciences, Natural Sciences, and Veterinary Medicine & Biomedical Sciences. Sixty faculty members representing over a dozen departments provide an interdisciplinary focus on improving health, fighting disease, and aiding persons with disabilities. At the graduate level, SBME offers a Master of Science and a Doctor of Philosophy in bioengineering, and a Master of Engineering (online and on campus) with a specialization in biomedical engineering. See the Graduate and Professional Bulletin for graduate program listings. The Walter Scott, Jr. College of Engineering offers a Bachelor of Science in biomedical engineering with a unique five-year program where graduates receive two B.S. degrees: one in biomedical engineering and the other in one of three traditional engineering areas - chemical & biological engineering, electrical engineering, or mechanical engineering. An undergraduate minor in biomedical engineering is also offered. See University-Wide Instructional Programs for the interdisciplinary minor.

Biomedical engineering lies at the interface of engineering, biology, and medicine. With over 40 state-of-the-art biomedical and engineering research labs, including the world-renowned Veterinary Teaching Hospital and Animal Cancer Center, we offer hands-on experience
for undergraduate and graduate students to work alongside leading researchers. Diverse fields of research include medical devices and therapeutics, imaging and diagnostics, and regenerative and rehabilitative medicine. CSU provides a rich environment for interdisciplinary research and day-to-day collaborations and is positioned to offer unique bioengineering degree programs due to our faculty expertise, the interdisciplinary nature of the SBME, and the highly-ranked veterinary program. Our biomedical engineering programs integrate biological, chemical, physical, and mathematical sciences with engineering principles and clinical studies, and our graduates are well prepared for careers in research, education, veterinary or human medicine, and industry.

Biomedical engineers are involved in a wide variety of activities on a daily basis. Practical applications of biomedical engineering include development, design, production, research, and/or teaching in areas such as:

- Designing biomedical materials and/or medical devices and equipment (e.g., pacemakers, bio-compatible wheelchairs, exercise equipment for astronauts, creating/improving materials to help joint replacements last longer)
- Developing or improving therapies for fighting cancer, tuberculosis, or other illnesses and diseases (e.g., nanoscaffolding for localized chemotherapy delivery, telemetric sensors to determine healing rates in bone fractures or to detect key chemicals in live tissue with high temporal and spatial resolution)
- Finding better ways to image and/or diagnose illnesses (e.g., using laser-based imaging to detect viruses, developing ways to increase electrical signals to detect threats to food safety and security, designing biosensors to diagnose cancer cells, developing software to determine toxic pesticide levels in people)

**Potential Occupations**

Biomedical engineering applies engineering principles to medicine and improving quality of life for humans and animals. Biomedical engineers work in a variety of settings. Some biomedical engineers spend their days in the lab, researching new devices and systems that solve medical and health care-related problems. Others might work in clinical settings, run biomedical-focused enterprises, design new therapies or diagnostics, assist medical facilities with engineering systems, or engage in regulatory affairs or patent law. Our graduates are well prepared for careers in research, education, or industry.

**Undergraduate**

**Undergraduate Bachelor of Science Programs in Biomedical Engineering**

The Bachelor of Science program in Biomedical Engineering has four pathways, corresponding to four rigorous traditional coursework plans that provide depth and support the breadth of biomedical knowledge and applications. The coursework in these four pathways is designed not only to support biomedical engineering but also to satisfy the curricular requirements of one of four traditional engineering degrees as administered by partner engineering departments.

The four curricular pathways for the BME B.S. degree are:

- B.S. degree in Biomedical Engineering combined with a B.S. degree in Chemical and Biological Engineering
- B.S. degree in Biomedical Engineering combined with a B.S. degree in Electrical Engineering, Electrical Engineering Concentration
- B.S. degree in Biomedical Engineering combined with a B.S. degree in Electrical Engineering, Laser and Optical Concentration
- B.S. degree in Biomedical Engineering combined with a B.S. degree in Mechanical Engineering

The BME program requires 157 or 158 credit hours of coursework, depending on the selected pathway, nominally distributed over five years.

In the first year, students take BIOM 101 as well as foundational math, science, and engineering courses. Through the second and third years, they gain a foundation in the traditional engineering major as well as life and physical sciences courses needed for biomedical engineering. The following years allow students to build a more thorough understanding of biomedical engineering, and their studies culminate in a Senior Design project in the fifth year that provides hands-on experience with an interdisciplinary team of peers. This combination of practical application and traditional academic rigor complement the breadth and depth of this fairly unique program, and provides excellent preparation and market value for graduates’ next steps in industry, academia, or research.

The Bachelor of Science in Biomedical Engineering at Colorado State University is accredited by the Accreditation Board for Engineering and Technology (ABET). It was first accredited in 2016, and this accreditation is retroactive for all prior graduates of the B.S. in biomedical engineering program. The partner majors include electrical engineering (EE), chemical and biological engineering (CBE), and mechanical engineering (MECH). These three degree programs are accredited by the Engineering Accreditation Commission of ABET.

The educational objectives of the biomedical engineering program are to prepare our students to:

- Demonstrate high professional, social, and ethical standards while examining and addressing the global impact of technology to improve quality of life in our society and environment
- Apply broad and deep knowledge, practical experiences, and creativity to solving problems at the interface of engineering and the life sciences as individuals and team members
- Use their multidisciplinary background to foster communication and collaboration across professional and disciplinary boundaries
- Recognize and expand the scope of their knowledge, continue self-directed learning, and identify and create professional opportunities for themselves and others.

Graduates in Biomedical Engineering will have an ability to:

- Apply knowledge of mathematics, science, and engineering.
- Design and conduct experiments, as well as to analyze and interpret data.
- Design a system, component, or process to meet desired needs within realistic constraints such as economic, environmental, social, political, ethical, health and safety, manufacturability, and sustainability.
- Function on multidisciplinary teams.
- Identify, formulate, and solve engineering problems.
- Understand professional and ethical responsibility.
- Communicate effectively.
• Understand the impact of engineering solutions in a global, economic, environmental, and societal context.
• Recognize the need for, and ability to, engage in life-long learning.
• Gain knowledge of contemporary issues.
• Use the techniques, skills, and modern engineering tools necessary for engineering practice.

Major Completion Map

**Distinctive Requirements for Degree Program:**

**TO DECLARE MAJOR:** Engineering is a controlled major: students are admitted into the major only if they meet established academic standards. Please see competitive major requirements or the advisor in the Department for more information.

**TO PREPARE FOR FIRST SEMESTER:** The curriculum for this major assumes students enter college prepared to take calculus and chemistry. To qualify for graduation, students in the biomedical engineering combined with chemical and biological engineering program must achieve a minimum 2.000 grade point average at CSU in all courses in engineering, mathematics, computer science, statistics, physics, and chemistry as well as courses taken as technical electives. Students are required to participate in the Professional Learning Institute (PLI) program as a requirement for graduation. The program consists of eleven PLI workshops distributed by focus areas as follows: Global and Cultural Diversity (2 workshops), Innovation (2 workshops), Leadership (2 workshops), Civic and Public Engagement (2 workshops), and Ethics (3 workshops). Each workshop is between 1-2 hours long and no outside preparation is required to attend any of the workshops. Attendance at the required workshops may be spread over the student’s five-year program.

1 Students are required to participate in the Professional Learning Institute (PLI) program as a requirement for graduation. The program consists of eleven PLI workshops distributed by focus areas as follows: Global and Cultural Diversity (2 workshops), Innovation (2 workshops), Leadership (2 workshops), Civic and Public Engagement (2 workshops), and Ethics (3 workshops). Each workshop is between 1-2 hours long and no outside preparation is required to attend any of the workshops. Attendance at the required workshops may be spread over the student’s five-year program.

2 Select a total of 14 credits from the Electrical Engineering Technical Elective List.

3 A maximum total of 3 credits of 495 Independent Study may be applied towards technical elective degree requirements.

Distinctive Requirements for Degree Program:

TO DECLARE MAJOR: Engineering is a controlled major: students are admitted into the major only if they meet established academic standards. Please see competitive major requirements or the advisor in the Department for more information.

TO PREPARE FOR FIRST SEMESTER: The curriculum for this major assumes students enter college prepared to take calculus and chemistry. To qualify for graduation, students in the biomedical engineering combined with electrical engineering program must achieve a minimum 2.000 grade point average at CSU in all courses in engineering, mathematics, computer science, statistics, physics, and chemistry as well as courses taken as technical electives. Students are required to participate in the Professional Learning Institute (PLI) program as a requirement for graduation. The program consists of eleven PLI workshops distributed by focus areas as follows: Global and Cultural Diversity (2 workshops), Innovation (2 workshops), Leadership (2 workshops), Civic and Public Engagement (2 workshops), and Ethics (3 workshops). Each workshop is between 1-2 hours long and no outside preparation is required to attend any of the workshops. Attendance at the required workshops may be spread over the student’s five-year program.

Distinctive Requirements for Degree Program:

TO DECLARE MAJOR: Engineering is a controlled major: students are admitted into the major only if they meet established academic standards. Please see competitive major requirements or the advisor in the Department for more information.

TO PREPARE FOR FIRST SEMESTER: The curriculum for this major assumes students enter college prepared to take calculus and chemistry. To qualify for graduation, students in the biomedical engineering combined with electrical engineering program (with concentration in lasers and optics) must achieve a minimum 2.000 grade point average at Colorado State in all courses in engineering, mathematics, computer science, statistics, physics, and chemistry as well as courses taken as technical electives. Students are required to participate in the Professional Learning Institute (PLI) program as a requirement for graduation. The program consists of eleven PLI workshops distributed by focus areas as follows: Global and Cultural Diversity (2 workshops), Innovation (2 workshops), Leadership (2 workshops), Civic and Public Engagement (2 workshops), and Ethics (3 workshops). Each workshop is between 1-2 hours long and no outside preparation is required to attend any of the workshops. Attendance at the required workshops may be spread over the student’s five-year program.

1. Students are required to participate in the Professional Learning Institute (PLI) program as a requirement for graduation. The program consists of eleven PLI workshops distributed by focus areas as follows: Global and Cultural Diversity (2 workshops), Innovation (2 workshops), Leadership (2 workshops), Civic and Public Engagement (2 workshops), and Ethics (3 workshops). Each workshop is between 1-2 hours long and no outside preparation is required to attend any of the workshops. Attendance at the required workshops may be spread over the student’s five-year program.

2. Select 3 credits from any of the following: MECH 303 or any 400-level MECH course except MECH 486A, MECH 486B, MECH 488, MECH 410, MECH 495, MECH 498A, or MECH 498B.

Major Completion Map

Distinctive Requirements for Degree Program:

TO DECLARE MAJOR: Engineering is a controlled major: students are admitted into the major only if they meet established academic standards. The biomedical engineering combined with mechanical engineering program has additional admissions requirements and enrollment limits. Please see competitive major requirements or the advisor in the Department for more information.

TO PREPARE FOR FIRST SEMESTER: The curriculum for this major assumes students enter college prepared to take calculus and chemistry. To qualify for graduation, students in the biomedical engineering combined with mechanical engineering must achieve a minimum 2.000
grade point average at CSU in all courses in engineering, mathematics, computer science, statistics, physics, and chemistry as well as courses taken as technical electives. Students are required to participate in the Professional Learning Institute (PLI) program as a requirement for graduation. The program consists of eleven PLI workshops distributed by focus areas as follows: Global and Cultural Diversity (2 workshops), Innovation (2 workshops), Leadership (2 workshops), Civic and Public Engagement (2 workshops), and Ethics (3 workshops). The College of Health and Human Sciences (http://www.chhs.colostate.edu) comprises six academic departments and two schools. It is a human-centered place, with a focus on educating students for people-oriented professions and on applying creative, interdisciplinary research to solve social problems. Each of its units offers professional education for careers and for lifelong learning, through a solid grounding in the natural sciences, social sciences, and humanities as well as courses specific to each field of study. The College currently includes the Departments of Construction Management; Design and Merchandising; Food Science and Human Nutrition; Health and Exercise Science; Human Development and Family Studies; and Occupational Therapy; and the Schools of Education and Social Work.

Learning within the College takes place in a variety of settings on and off campus, forging strong links between the classroom and the workplace. All of the College’s programs combine classroom instruction with hands-on experience in state-of-the-art computer laboratories, research laboratories, or specialized centers and institutes that emphasize the practical application of new knowledge.

Faculty in the College of Health and Human Sciences maintain valued and useful relationships with a broad range of constituents, enhancing College visibility within the larger community, fulfilling CSU’s land-grant mission. These vital connections also provide students with excellent opportunities for working internships in their fields. For all its students, the College places a strong emphasis on experiential learning and leadership opportunities that allow students to test new skills in real-world settings. Numerous scholarships (http://www.chhs.colostate.edu/students/scholarships.aspx) are available through the College of Health and Human Sciences each spring semester.

**Department of Construction Management**

Office in Guggenheim Hall, Room 102
(970) 491-7353
Professor Mostafa Khattab, Department Head

The Construction Management (CM) program at CSU is one of the top-ranked programs in the nation. Since its inception in 1946, more than 5,000 students have graduated, many of them going on to become leaders in their field. The program is accredited by the American Council for Construction Education.

Construction management is the overall planning, coordination, and control of a project from inception to completion. The CM major addresses issues related to the management of multiple project sites and the applications of resource management, schedule control, cost control, design, and other requirements of the construction process. Design elements concentrate on the relationship between the built environment and the comfort of its inhabitants while safety education emphasizes the health of the individual worker.

Undergraduate Program

A major in Construction Management provides a strong foundation for professional careers in the construction industry. The curriculum integrates technology and innovative management systems with the basics of civil engineering, business and management, and the communication skills required to be successful in today’s world. Coursework includes construction methods, estimating, scheduling, computer technologies, architectural principles, fundamentals of management and law, steel and concrete structures, and soils. The curriculum incorporates hands-on labs for most courses. This diverse program creates a broad range of career options for graduates.

Graduate Program

The Department of Construction Management offers graduate study leading to the Master of Science degree. The focus of the department is on professional programs that successfully combine theory and application with a strong emphasis in applied management. The master’s program is an advanced curriculum designed to allow students to tailor a portion of the specialization requirements to meet individual interests and goals.

Each program can be individually tailored to meet the needs and interests of the student.

Students interested in graduate work should refer to the Graduate and Professional Bulletin and the Department of Construction Management (http://cm.chhs.colostate.edu).

Major in Construction Management

The Construction Management (CM) program at CSU is one of the top-ranked programs in the nation. Since its inception in 1946, more than 5,000 students have graduated, many of them going on to become leaders in their field. The program is accredited by the American Council for Construction Education.

Construction management is the overall planning, coordination, and control of a project from inception to completion. The CM major addresses issues related to the management of multiple project sites and the applications of resource management, schedule control, cost control, design, and other requirements of the construction process. Design elements concentrate on the relationship between the built environment and the comfort of its inhabitants while safety education emphasizes the health of the individual worker.

A major in Construction Management provides a strong foundation for professional careers in the construction industry. The curriculum integrates technology and innovative management systems with the basics of civil engineering, business and management, and the communication skills required to be successful in today’s world. Coursework includes construction methods, estimating, scheduling, computer technologies, architectural principles, fundamentals of management and law, steel and concrete structures, and soils. The curriculum incorporates hands-on labs for most courses. This diverse program creates a broad range of career options for graduates.

The Construction Management major is controlled, and all students admitted to CSU or seeking to change their major to CM must first be designated as pre-construction management. To be considered for admission to CM students must:

- Complete a minimum of 15 credits at CSU
- Earn a minimum 2.750 cumulative CSU GPA
- Complete CON 101 with a “B” grade or better
- Complete CO 150 with a “B” grade or better
- Complete MATH 125 with a “C” grade or better

Once a student has met the minimum requirements listed above they are eligible to apply to the CM program.

During their academic career, CM students are required to obtain an internship (full-time structured work experience) position with any one of a variety of construction companies and organizations. Our Phelps Placement Office assists current and graduating students as well as alumni with in-house interviews, bi-annual career fairs, and the publication of a graduate resume book.

Learning Outcomes

Students will develop and demonstrate:

- Professional, analytical, and problem solving skills related to the career requirements in construction management
- Strong professional communication skills with an emphasis on written, graphic, and verbal skills related to the career requirements in construction management
- Technical proficiency in the following construction management areas: design/engineering, management, materials and methods, estimating, scheduling, safety, surveying, and project administration

Potential Occupations

The construction industry has become a highly technical industry marked by continuous and dramatic change. There is a continued demand for capable and highly trained construction management professionals who can adapt and become effective leaders in the field. CM continues to boast one of the highest placement rates and entry level salaries of all majors.

In addition to the campus Career Center, the CM Department prides itself on its in-house career support. Services provided by the Phelps Placement Office include internship and career placement, bi-annual CM career fair, in-house industry interviews, graduate resume publication, year-round intern and job postings, resume and business correspondence resources, and career assessment counseling.

Entry-level occupations include, but are not limited to: field engineer, assistant estimator, project scheduler, cost control engineer, safety engineer, project supervisor, project coordinator, quality assurance specialist, project engineer, assistant project manager, and assistant superintendent. Recruiting Industries include: Commercial, Heavy Civil and Heavy Highway, Industrial and Utility, Mechanical and Electrical, Project Controls and Consulting, Residential Development, Specialty Contracting, and Transportation.

Students may consider simultaneously completing the requirements for a minor in Business Administration. Several of the courses required for the minor in Business Administration are also required for the major in Construction Management curriculum.

Minor in Merchandising

A minor in Merchandising provides students in other majors an opportunity to expand their knowledge of merchandising. The minor may be of special interest to students majoring in areas such as art, business, and journalism and technical communication. The perspectives gleaned by selecting a Merchandising minor both enhance understanding of the student’s major program and expand career opportunities available to the student.

The Apparel and Merchandising program emphasizes study in apparel and textile design, product development, marketing and retailing of consumer goods, and sourcing of products. The program encompasses global study of the cultural/historical economic, and scientific aspects of the textile and apparel industry, while fostering understanding of consumer behavior and socially responsible business practices.

Requirements
Effective Fall 1999

Students must satisfactorily complete the total credits required for the minor. Minors and interdisciplinary minors require 12 or more upper-division (300- to 400-level) credits.

Additional coursework may be required due to prerequisites.

Major in Interior Design

The Interior Design program exemplifies the definition of the professional interior designer as qualified by education, experience, and examination to enhance the function and quality of life, increase productivity, and protect the health, safety, and welfare of the public. The program is accredited by the Council for Interior Design Accreditation (CIDA).

Students seeking to apply to the Interior Design major at CSU first are admitted to CSU as Pre-Interior Design. All students who wish to be considered for admission to Interior Design will be required to complete the Interior Design Scenario. Selective advancement into the major is based on the score received at the Interior Design Scenario determined by external reviewers who assess student competencies in writing, drawing, problem solving, and conceptual frameworks. A cohort of approximately 40 students is selected upon completion of the Interior Design Scenario. The Design Scenario occurs annually in spring semester. See the Department of Design and Merchandising (http://www.dm.chhs.colostate.edu) website for more information regarding the Interior Design Scenario.

In order to participate in the Interior Design Scenario students must have the following:

- GPA of 2.5 or higher.
- Completion of or current enrollment in INTD 129 and INTD 166 or equivalent. Equivalent courses from other institutions must be approved at least two weeks prior to the Interior Design Scenario by the Interior Design transfer advisor.

The Interior Design department Academic Success Coordinator will work with Pre-Interior Design students and advise them on their current performance in relation to the possibility of their admission to Interior Design.

Faculty in the Interior Design program value learning as a collaborative effort inviting diversity, design research as a basis for excellence in design practice, and new models for learning to respond to new ways of working. The program guides students toward becoming dedicated interior designers who have strong communication skills, are active as team players and creative problem solvers, and who make a positive impact in the practice of interior design. Students engage in research-based problem solving, providing a solid transition from education to practice in a global community. An internship in interior design practice is required for graduation.
The Interior Design graduate will learn the entirety of the design process, beginning with assessment of client needs through design programming, development of alternative design solutions, development of conceptual and theoretical frameworks, selection of furniture and finish materials, construction documentation, core compliance, and contract administration including project management and post-occupancy evaluation methodologies. In addition, students take coursework in construction/building systems and codes, business principles in interior design, computer-aided design and drafting, animation, multimedia, graphic visualization, interior design history, and sustainable practices.

The teaching facilities include design studios; display, resource, and critique spaces; and computer labs.

**Learning Outcomes**

- Interior Design core skills will include but are not limited to: applications of history and culture; space and form; color and light; fixtures, equipment, and finish materials; environmental systems; building systems, and interior construction; technology; and regulations.
- Students in the Interior Design major will be able to assess and synthesize multiple factors in creating/producing quality products, services, and design solutions. The factors will address human, design, industry and business, global, science and technology sensitivities.
- Students will be able to describe their understanding of multiple processes that are involved in the practice of interior design. These processes include but are not limited to critical and creative thinking, communication, ethics, social responsibility and sustainability, collaborative and interdisciplinary.
- Students will distinguish and demonstrate qualities of professionalism and business practice that contribute to the industry, and advance the value of their knowledge to the near and/or built environments.
- Students will enroll in Internships credits at least one semester before graduation.
- Students who engage in co-curricular learning experiences will have the opportunity to network with industry professionals, engage in project based learning experiences, assist with department recruiting events and new student orientations, and attend a variety of leadership events.

**Potential Occupations**

Students are prepared as entry-level interior designers with competency in design fundamentals, space planning and programming, code compliance, lighting, materials research, project management, and professional practices in the design of diverse interior spaces.

Graduates seek employment in interior design and architecture firms as residential, corporate, retail, health care, institutional, education, and hospitality designers. Graduates also work in lighting design, product development, marketing, research, design-related journalism, illustration, facility management, showroom management, and as manufacturers' representatives.

The CSU Educator Preparation Program is nationally accredited by the Council for the Accreditation of Educator Preparation (CAEP) and state accredited by the Colorado Department of Education and the Colorado Department of Higher Education.

Section 207 of Title II of the Higher Education Act mandates that the Department of Education collect data on state requirements for teacher certification and licensure, as well as data on the performance of teacher preparation programs. The Title II Institutional Report for CSU is available through the Educator Preparation website (http://www.cep.chhs.colostate.edu/school/accreditation.aspx).

Learning Outcomes

Students will demonstrate:

- Employment of innovative instructional methods to promote student success and to meet state and national standards
- Understanding of how students differ in their approaches to learning and create instructional opportunities that are adapted to diverse learners
- Mastery of the content knowledge students will use for teaching a subject
- Ability to impact learning of P-12 students through course work and field experiences
- Knowledge about careers in teaching and of education governance

Potential Occupations

Examples include: public or private school teacher, principal, staff developer, educational sales, school counselor, school social worker, school occupational therapist, curriculum specialist, human resources trainer, post-secondary teacher, and early childhood center director.

One of the most important ways to help people and to impact our society is through involvement in schools. Teachers make lasting contributions to our nation and its many generations of learners. Teacher education programs at CSU serve the needs of individuals preparing to teach in most
secondary areas, K-12 art, foreign languages, instructional technology, and music, or early childhood education. CSU is one of the public institutions in Colorado designated to offer programs leading towards a career and technical (vocational) credential. Candidates for teacher licensure are skilled in a teaching concentration and educational methodology. These students take their professional education course work concurrently while completing their content area coursework. Candidates may complete licensure while enrolled in an undergraduate program or after completing a bachelor’s degree at an accredited university.

Admission to Teacher Licensure

Formal admission to the Teacher Preparation Program is based upon completion of a minimum of 30 semester credits and successful completion of the following:

- Submission of written application
- Submission of reference forms
- Field experience documentation (20 hour form)
- 2.75 cumulative GPA; 3.00 GPA for admission to the social studies endorsement
- Evidence of oral English proficiency
- Background check (custom background check for CSU’s Teacher Preparation Program)
- Successful completion of Phase I education courses (EDUC 275 and EDUC 340)
- Verification of lawful presence

(Note: Admission requirements are subject to change based on program and state licensing requirements and laws.)

Detailed information about the admission process and specific deadline dates for admission are available in the Center for Educator Preparation (http://www.cep.chhs.colostate.edu) Advising Center, Education Building, Room 111.

Student Teaching

Teacher licensure candidates apply for student teaching placement one semester before student teaching. Candidates must pass the state licensing exam in their respective teaching content area by mid-April or mid-October before the student teaching experience. Additionally, candidates must demonstrate acceptable professional dispositions and academic fitness. Student teaching must be completed at an approved school. Placement is contingent upon acceptance of the student by a school system. All assignments are made by CSU. The experience is full time for the specific time period.

Requirements for Licensure

Colorado licensure requires completion of an approved teacher preparation program and the recommendation of the institution at which the program was completed. The Co-Chairs and Student Teaching Coordinator in the Center for Educator Preparation serve as the licensure officers for CSU. Additional requirements of the Colorado Department of Education and the Colorado Department of Higher Education include the successful completion of the state licensing exam. Successful completion of the approved teacher preparation program at CSU does not guarantee successful completion of the state licensing exam. The Center for Educator Preparation does not assume responsibility for the successful completion of the state licensing exam.

CSU’s approved teacher preparation program requirements include completion of a baccalaureate degree, completion of content area and professional education course work, and fulfillment meeting the Colorado Performance Based Standards for teachers at the proficient or advanced proficient level. Additionally, all grades in professional education and content courses must be a C or better for licensing. The minimum scholastic average acceptable for completion of the Teacher Preparation Program and recommendation for licensing is 2.75 computed for all course work, except for social studies where a 3.00 GPA is required.
CSU reserves the right to not recommend a student for licensure on the basis of unacceptable professional dispositions and academic fitness/performance.

**Professional Education Coursework for Licensure**

The professional education requirements listed below apply to all teaching endorsement areas except early childhood education where EDUC 400, EDUC 425, and EDUC 426 are required in place of EDUC 350, EDUC 386, EDUC 450, and EDUC 486E. Additional courses may be required by specific endorsement areas. For clarification, refer to individual coursework check sheets which can be obtained in the Education Building, Room 111, and online (http://www.cep.chhs.colostate.edu).

Candidates in all endorsement areas must complete appropriate methods courses the semester prior to enrolling in student teaching. (EDUC/EDCT 4XX - level courses)

**Career and Technical Education**

Individuals desiring to teach in or administer career and technical programs in the state of Colorado must qualify for a credential in addition to a teaching license. Those who plan to qualify as career and technical education (CTE) teachers or directors must meet the requirements for a CTE credential established by the Community Colleges of Colorado and the Colorado Department of Education. Credentialing questions may be directed to the Department of Education, (303) 866-6628.

**Professional Education Course Requirements**

The professional education course requirements listed under Professional Education Coursework for Licensure apply to all teaching endorsement areas in career and technical education.

**Agricultural Education**

Kellie Enns, Ph.D., Program Chair

Candidates studying Agricultural Education are prepared to teach youth and adults in high schools, community colleges, junior colleges, area career and technical schools, and technical institutes. **Major in Family and Consumer Sciences, Family and Consumer Sciences Education Concentration**

Family and Consumer Sciences Education directly addresses the needs of youth, families, and consumers. Helping to shape the future, teachers of family and consumer sciences impact the lives of individuals, the health of families, and the welfare of society.

The Education concentration has as its mission to *teach and model best educational practices to prepare emerging teachers as learners, collaborators, and leaders*. The Family and Consumer Sciences licensure program includes general education courses, subject matter courses, and teacher preparation courses.

Students apply for the licensure program in their junior year and participate in practicum experiences working closely with classroom teachers and students in area schools. Throughout the phases of the licensure program, teacher candidates are placed in a middle school and a high school where they apply professional knowledge and refine their instructional skills. While student teaching, they work closely with a Family and Consumer Sciences mentor teacher(s) and a university professor(s).

Teacher candidates completing the program meet the requirements for the Bachelor of Science degree in Family and Consumer Sciences, a Colorado Initial Teaching License in Family and Consumer Sciences, and a Family and Consumer Sciences Career and Technical Education endorsement (1200 hours of paid work experience related to FCS is required for the CTE endorsement).

This concentration is accredited and approved by the Colorado Department of Higher Education (CDHE) and the Colorado Department of Education (CDE). Nationally, it is approved by the Teacher Education Accreditation Council.

Students interested in pursuing a teaching license through CSU may refer to the School of Education section in this chapter for general information. Detailed information about the Center for Educator Preparation (CEP) (http://cep.chhs.colostate.edu) program and licensure requirements is available in the Education Building, Room 111.

Major in Fermentation Science and Technology
Fermentation Science and Technology (http://www.fshn.chhs.colostate.edu/students/undergraduate/fermentation-science) is a multi-disciplinary major focusing on the science of fermented foods and beverages. The curriculum focuses on the science of the processes and methods involved with using microorganisms in the commercial production of fermented products. Courses in the major also emphasize the safety, culinary, and nutritional aspects of fermented foods and beverages. This major prepares students for employment in the fermented food and beverage industries in such roles as product development, processing, quality assurance and control, sensory evaluation, packaging, distribution, and plant management. Students enrolled in this major have the opportunity to participate in industry activities and professional organizations to increase their practical understanding of fermented food and beverage production, processing methods, and specific techniques.

Learning Outcomes
Students will demonstrate:
• Ability to integrate biological and chemical processes to quality and stability of fermented foods, and to critique and effectively communicate the relationships among processing of fermented foods, nutrition, and food safety.
• Discipline specific knowledge of the skills and competencies needed in fermentation science and technology. Examples include knowledge of food chemistry, sensory evaluation of fermented products, brewing processes, refining and packaging technology, food production management, and fermentation microbiology.
• Understanding of classification, production, financial aspects, consumption, and service of controlled beverages, including effective management of facilities and people with emphasis on safe service training and management.
• Competent application of science, history, culture, safety, health, and nutrition dimensions of fermented foods and beverages.

Potential Occupations
Partnerships with industry help provide field experience and internships for majors in Fermentation Science and Technology. The food industry is the largest in the world and fermentation science is a rapidly emerging area so the future is promising. Examples of careers include fermentation scientist, food scientist, food technologist, food health inspector, food safety specialist, brewer, biotechnologist, quality control analyst, sensory analyst, food microbiologist, or entrepreneur.

Major in Hospitality Management

The Hospitality Management major combines courses in food service, lodging, event planning, nutrition, and business to provide students with a strong skill set for entry into hospitality professions. Elective credits allow students to take courses in areas of interest to enhance their education. The curriculum has a strong emphasis on management skills required for success in the hospitality industry.

The Hospitality Management program maintains strong ties with the foodservice, lodging, and event planning industries locally, state-wide, and nationally to connect graduates with a wide variety of employment opportunities in the expanding commercial and non-commercial segments of the hospitality management industry. The hospitality industry is the second largest employer in Colorado and the United States. The department oversees internships in the industry and aids in job placement upon graduation.

Learning Outcomes

Students will demonstrate:

- The ability to make logical decisions by organizing, analyzing, and interpreting information and formulating rational solutions in a hospitality business environment.
- The knowledge and skills to successfully manage a hospitality operation, including allocating resources such as time, labor, and material inputs to achieve customer satisfaction.
- An understanding of the managerial functions of planning, organizing, directing, staffing, controlling, and budgeting in various hospitality environments.
- The behaviors of effective, ethical leaders by demonstrating the fundamental principles of leadership in a hospitality business environment.

Potential Occupations

Participation in the experiential learning laboratory, The Aspen Grille, and internship opportunities are highly recommended to enhance practical training and development. The hospitality industry encompasses careers in restaurants, hotels, resorts, spas, event venues, catering, breweries and wineries, bed and breakfast inns, ski areas, business and industry dining venues, hospitals, correctional facilities, and military facilities in the United States and around the world.

Examples of careers include, but are not limited to: restaurant managers, caterers, event planners, wedding planners, banquet managers, hotel sales and marketing, hotel guest operations, hospitality real estate acquisition, hotel manager, food writing and media, brewery hospitality operations, commercial wine and liquor sales, chef, purchasing agent, conference coordinator, guest service agent, tourist attraction manager, spa operations manager, housekeeping manager, time share sales and marketing, bed & breakfast owner/manager, travel agent, school food service manager, hospitality food and equipment sales representative, health inspector, hospital food service manager, food importer, and country club manager.

Major in Nutrition and Food Science

Public interest regarding the importance of nutrition to health and fitness is at a high level and increasing. The Nutrition and Food Science major involves integration of the biological, medical, and social sciences and their application to the improvement of human nutrition and fitness, prevention of chronic disease, and improved quality of life. The major is both science and human service oriented.

Nutrition and Food Science graduates gain a scientific understanding of the principles of human nutrition, the role of nutrition in the prevention and management of disease, delivery of nutritional care, and the principles of nutrition assessment and food preparation. Additionally, graduates know the techniques of interviewing, counseling, information management, and effective communication.

Four concentrations are currently available in this major – Dietetics and Nutrition Management, Nutrition and Fitness, Nutritional Sciences (pre-med), and Food Safety and Nutrition.

Learning Outcomes

Students will demonstrate:

- Ability to identify nutrition-related public health problems, integrate information from basic nutrition sciences, critically analyze data, and develop appropriate conclusions
- Discipline-specific knowledge, skills, and competencies needed in the field of dietetics and nutrition. Examples include knowledge of medical nutrition therapy; nutrition and metabolism; program planning, monitoring, and evaluation; management in school nutrition programs and long-term care; food safety; and the role of food in the promotion of health
- Competent application of nutrition knowledge and skills in a work environment, including an ability to calculate and/or define diets for
Admission to the Accredited Didactic Program requires a minimum 3.0 GPA and grades of B or better in LIFE 102, CHEM 107 (See Dietetics and Nutrition Management concentration (http://fshn.chhs.colostate.edu/students/undergraduate/nutrition-food-science/dietetics.aspx) on website for specific learning outcomes for the ACEND accredited dietetics program).

**Potential Occupations**
Participation in community outreach, internships, volunteer activities, or cooperative education opportunities is highly recommended to enhance career planning, skills, and development. Graduates who go on for advanced studies can attain more responsible leadership positions with the possibility of rising to top professional levels.

Some examples of career opportunities include, but are not limited to: dietitian or nutritionist in health care, hospitals, long-term care, schools, state or county health agencies, health clubs, corporate wellness programs, grocery stores/food chains, or private practice; community nutritionist; biomedical scientist; restaurant manager; caterer; quality assurance specialist; food scientist; food inspector; food technologist; food plant manager; food service manager in hospitals, schools, or long-term care. The median salary for Registered Dietitians is $49,500 – the range is $38,976-$64,993.

Students interested in teaching nutrition and/or food science content at the secondary education level should explore the interdepartmental concentration in Family and Consumer Sciences Education at the beginning of this college section. The Family and Consumer Sciences Education concentration allows students to combine their interests in nutrition, wellness/health, food science, culinary arts, and/or catering with teaching. Family and Consumer Sciences Education students take course work in the Department of Food Science and Human Nutrition, Design and Merchandising, and Human Development and Family Studies as well as complete an education sequence which qualifies them for a secondary teaching license. The demand for secondary family and consumer sciences teachers exceeds the supply in Colorado as well as nationally. Therefore, job placement is extremely high with starting salaries in the $34,000-$37,000 range for a nine-month teaching position.

Students may choose from among four concentrations under the Nutrition and Food Science major.

**Concentrations and Options**
- Dietetics and Nutrition Management Concentration
  - Accredited Didactic Program Option
  - Childhood Nutrition Option
  - Gerontology Nutrition Option
- Nutrition and Fitness Concentration
- Nutritional Sciences Concentration

**Major in Nutrition and Food Science, Dietetics and Nutrition Management Concentration**

The Dietetics and Nutrition Management concentration provides a broad background in clinical nutrition, health promotion, and food service management. The science-based curriculum includes nutritional assessment, application of food theory, and course work focusing on nutritional counseling and medical nutrition therapy. The concentration is designed to prepare students for a dietetic internship and a professional career in medical nutrition therapy or community-based nutrition programs. The Accredited Didactic Program option of the Dietetics and Nutrition Management concentration is accredited by the Accreditation Council for Education in Nutrition and Dietetics (ACEND) of the Academy of Nutrition and Dietetics (AND). This concentration is open to all students interested in becoming registered dietitians. However, students must qualify to continue in the Accredited Didactic Program option by meeting the prerequisites for the Dietetic Practice Seminar (FSHN 392) in their junior year. These prerequisites are an overall GPA of 3.0 and grades of “B” or better in FSHN 150, FSHN 300/FSHN 301, and basic sciences (CHEM 107/CHEM 108, or CHEM 111, CHEM 112, CHEM 113; CHEM 245, CHEM 246; LIFE 102 or BZ 110, BZ 111; BMS 300, BMS 302; FSHN 150, FSHN 300, FSHN 301). Students who do not meet these requirements are encouraged to exercise their repeat/delete options in those courses which are lower than a “B” grade if they wish to be considered for the Accredited Didactic Program option. The Childhood Nutrition option prepares students for supervisory positions in the school nutrition program. The Gerontology Nutrition option prepares students for supervisory positions in food service management in long-term care and rehabilitation or for working with community programs providing nutrition services to older individuals.

**Options**
- Accredited Didactic Program Option
- Childhood Nutrition Option

2 Select enough elective credits to bring the program to a minimum of 120 credits, of which at least 42 must be upper-division (300- to 400-level).

Students may complete this major/option at 120 credits by selecting CHEM 107, CHEM 108, and BUS 150 in the freshman year. Students wishing to complete the Gerontology Interdisciplinary Minor should consult with advisors about course selection. Completion of the major/option and the minor will exceed the 120 credit total.

**Major in Nutrition and Food Science, Food Safety and Nutrition Concentration**

The Food Safety and Nutrition concentration blends a strong science base with courses in food science, food safety, food microbiology, and nutrition. The curriculum prepares students for employment in the food industry or in government in such areas as quality assurance, product development, research, food inspection, sensory evaluation, and consumer education. The concentration also provides an excellent background for a graduate program. Students in the concentration are encouraged to participate in the interdisciplinary minor in Food Science/Safety to further their understanding of the continuum of responsibility shared through the food system in ensuring that food is safe and healthful. By addition of several elective courses, students can also meet ACEND (http://www.eatrightacend.org/ACEND) course requirements.

The benchmark courses for the 8th semester are the remaining courses in the entire program of study.

Major in Nutrition and Food Science, Nutrition and Fitness Concentration

The nutrition and fitness concentration prepares students for employment as nutrition and fitness counselors and personal lifestyle coaches in health care settings, commercial establishments, public health settings, or private practice. The curriculum blends a strong science base with course work in exercise science, nutrition, teaching, and counseling. The concentration also provides an excellent background for a graduate program. By the addition of several elective courses, students can meet ACEND didactic course requirements if they meet requirements for FSHN 392.

Major in Nutrition and Food Science, Nutritional Sciences Concentration

The Nutritional Sciences concentration provides a strong background in natural and biomedical sciences and nutrition, making it an appropriate preparation for graduate study, medical school, or a career in nutritional research, biomedical research, or college teaching. This concentration forms the basis for a pre-medical professional program. By addition of several elective courses, students can meet ACEND course requirements if they meet requirements for FSHN 392.

Master of Science in Food Science and Nutrition

The Master of Science in Food Science and Nutrition includes advanced studies of nutrition science, food microbiology, preservation and safety, health properties of food and food components, and the development and dissemination of nutrition principles in the community. Thesis (Plan A) and non-thesis (Plan B) are available. A minimum of 35 credits is required for the MS degree. Please see the department [http://www.fshn.chhs.colostate.edu](http://www.fshn.chhs.colostate.edu) for more information.

Master of Science in Food Science and Nutrition, Dietetics Option (online)

GPidea Online Master’s Program Designed for Registered Dietitian Nutritionists

The GPidea (Great Plains Interactive Distance Education Alliance) program offers a fully online M.S. in Food Science and Nutrition for Registered Dietitian Nutritionists working in the field. The program is offered through a partnership of 8 different Universities (Colorado State University, Kansas State University, Kansas University Medical Center, University of Nebraska, Oklahoma State, Iowa State, South Dakota State and North Dakota State). The collaboration provides a rich offering of courses provided by expert faculty from each institution while earning a degree from CSU.

Programs of study are designed to allow students the flexibility to individualize coursework and research to their specialty, interests and career focus. The GPidea program objectives are to:

- Develop research skills, stimulate independent thought, and provide up-to-date knowledge in foods, nutrition, and food service and business management.

It is important to note that the program is open to those who are registered dietitian nutritionists (RD, RDNs) only. This program is not a didactic program in dietetics.

**Ph.D. in Food Science and Nutrition**

The Ph.D. in Food Science and Nutrition includes advanced studies of nutrition science, food microbiology, preservation and safety, health properties of food and food components, and the development and dissemination of nutrition principles in the community. A minimum of 72 credits is required for the Ph.D. degree. A minimum of 42 credits is required with a master’s degree in the same field of study. Contact the department (http://www.fshn.chhs.colostate.edu/students/graduate/doctoral) for more information.

**Minor in Nutrition**

This minor provides an opportunity for a non-major to gain a significant orientation to a food, nutrition, and health-related field. The courses in the minor in Nutrition have a significant number of prerequisites that should be examined carefully before selecting the minor. Although open to any interested student, the Nutrition minor would be most easily taken by students majoring in a life science discipline such as biology or health and exercise science.

**Requirements**

**Effective Fall 2004**

Students must satisfactorily complete the total credits required for the minor. Minors and interdisciplinary minors require 12 or more upper-division (300- to 400-level) credits.

Additional coursework may be required due to prerequisites.

Major in Health and Exercise Science

Students may choose from two concentrations offered in the Health and Exercise Science major—Health Promotion or Sports Medicine.

Learning Outcomes

Students will demonstrate:

- Practical knowledge and skills (stress/fitness testing, leadership, administrative, teaching/communication, customer service, and professional attitude) in exercise science and health promotion through laboratory and/or practicum and internship experiences
- Ability to synthesize, integrate, apply, and communicate health and exercise science disciplinary knowledge through structured written assignments and oral presentations
• Skills and knowledge required to successfully compete for employment within the discipline or compete for graduate or professional school placement

Potential Occupations
The United States and other developed countries are struggling with an aging and increasingly unhealthy population. Understanding the role of physical activity in preventing and treating disease and maintaining optimal health at any age is critical. Graduates trained in the foundations of human movement such as anatomy, physiology, exercise prescription and health behavior change AND the ability to apply this knowledge to enhance the health, well-being and functional performance of the public, will be in high demand.

We take pride in training students in Health and Exercise Science to be strong critical thinkers who can express themselves clearly in written and oral form, view the world from multiple perspectives and are models of professional behavior and citizenship: qualities that will serve them well in any career they choose to pursue. Graduates that follow the Health Promotion track also acquire theoretical and hands-on training that makes them competitive for career opportunities in a wide variety of areas including, but not limited to: corporate fitness/wellness, community health/wellness, public health, health behavior change, exercise technicians, cardiac rehabilitation, personal trainers, group exercise/fitness instructors, fitness/medical equipment sales, and recreation directors. In the Sports Medicine track, graduates acquire additional course work in areas such as biomechanics, neurophysiology and human nutrition. This training provides excellent preparation for graduate studies in allied health areas and a variety of medical professions.

Concentrations
• Health Promotion Concentration
• Sports Medicine Concentration

Major in Health and Exercise Science, Health Promotion Concentration
A concentration in Health Promotion provides academic content and experience in promoting positive health behaviors such as physical activity, weight management, stress management, identification of risk factors associated with chronic disease and exercise prescription. The curriculum focuses on exercise science, behavior change, health promotion program development, business administration, and practical field experiences. This concentration prepares students for careers in a wide variety of allied health fields, such as health/wellness, fitness facilities, sport specific training, clinical rehabilitative settings, corporate health and wellness programs, and non-profit organizations.

Major in Health and Exercise Science, Sports Medicine Concentration

The Sports Medicine concentration provides a strong science background and a solid grounding in the foundations of human movement. This track is dedicated to preparing students both professionally and academically for their future careers. The Sports Medicine concentration provides excellent preparation for those students seeking pre-professional preparation in medical fields, physical therapy or other allied health fields or students planning on pursuing an advanced degree (master’s and/or Ph.D.) in exercise science or a related field.

Some of the courses required for this concentration include chemistry, biology, physics, anatomy, kinesiology, exercise physiology, biomechanical principles and neuromuscular aspects of human movement, and human nutrition. This concentration provides a comprehensive understanding of health and exercise science while preparing students for post graduate programs.

Sports Medicine Guided Elective if you have substituted one of these courses for MATH 118, MATH 124 & MATH 125.
2  CHEM 111/CHEM 112 can be substituted for CHEM 107/CHEM 108 and should be seriously considered by students who want to go on to
graduate studies. Students should select CHEM 111/CHEM 112 as it better prepares students for CHEM 113/CHEM 114.
3  CHEM 341/CHEM 343/CHEM 344 may be substituted for CHEM 245/CHEM 246 provided that all three courses are completed.
4  Select enough elective credits to bring the program total to a minimum of 120 credits, of which at least 42 must be upper-division (300- to 400-
level).

Ph.D. in Human Bioenergetics

The Ph.D. in Human Bioenergetics prepares students for academic and research careers. The program trains professionals in basic and applied research addressing important aspects of human health and disease, human performance, and human aging. Students will be equipped to serve the state and the nation in a variety of capacities such as basic and applied research scientists in academic, industrial, and public health settings.

Human Bioenergetics is the multidisciplinary study of how energy is transferred in cells, tissues and organisms. The manner in which the body regulates energy transfer pathways and processes has a fundamental influence on health. These processes convert food into energy and relate directly to human health across the lifespan and the spectrum of functional capacities from chronic disease to elite athletic performance.

Major in Early Childhood Education

In collaboration with the Center for Educator Preparation (CEP) (http://cep.chhs.colostate.edu) within the School of Education (http://soe.chhs.colostate.edu) (SOE), the Department of Human Development and Family Studies (HDFS) (http://www.hdfs.chhs.colostate.edu) provides a competitive-entry Early Childhood Education Major requiring an application in the sophomore year for possible admission in the junior year. The degree enables students to apply for Early Childhood teacher licensure and D (http://www.coloradoofficeofearlychildhood.com/#director-qualifications/c15f)irector Qualifi (http://www.coloradoofficeofearlychildhood.com/#director-qualifications/c15f)cation (http://www.coloradoofficeofearlychildhood.com/#director-qualifications/c15f) in the state of Colorado, and will thus qualify students to engage in a number of early childhood professions: teaching grades P-3 in public or private schools in Colorado, teaching in Head Start or other preschool or childcare programs, establishing a business as a family child care or center child care provider, or serving as director of a childcare center. An understanding of human development and family studies provides a strong foundation for students desiring a license to teach young children between the ages of 0 and 8. Knowledge of lifespan developmental processes and family systems prepares future teachers to work in partnership with parents and grandparents in educating children. Students aspiring to work with children between the ages of 0 and 8 can apply during their sophomore year to the major in Early Childhood Education. If accepted, students take courses in HDFS and SOE as a part of their degree requirements.

Students are encouraged to check the program of study as a number of prerequisites are required prior to entry in the major. The Early Childhood Education Major uses a cohort model, and admits a limited number of students, typically between 25-30, each year. The admission process takes place once a year in the spring, with the admitted candidates starting in the fall. Students in the Early Childhood Education major achieve both Early Childhood Education core learning outcomes, obtained through HDFS and SOE courses, and all learning outcomes required by the Colorado Department of Education for Early Childhood Education licensure. (http://www.cde.state.co.us/cdeprof/checklist-initialtoprofessionalteacher)

Learning Outcomes

Students will demonstrate:

- Content knowledge and understanding of theory, research, and practice relevant to optimizing the development, health, and well-being of children and families in the context of the larger social environment.
- Effective written and oral communication skills appropriate for early childhood educators interfacing with colleagues, children, and parents/guardians.
- The ability to access, critically evaluate, and apply multiple forms of information related to children and families.
- Professional and leadership skills with individuals and families, including ethical and culturally sensitive conduct.
- Knowledge and skill in teaching and assessing literacy, mathematics, social studies, science, music, art, and physical education in early childhood.

Distinctive Requirements for Degree Program:

Students seeking admission to the Early Childhood Education (ECE) Major with teacher licensure must formally apply and be accepted. The admission process into the program takes place once a year in the spring with the admitted candidates starting the program the following fall. All coursework within the Center for Educator Preparation (CEP) requires a 4 semester (or 2 year) consecutive commitment to complete, therefore EDUC subject code courses must be taken in the semester indicated. Requirements for applying to the ECE major: 1) Must have a 2.75 GPA or better, 2) Suggested to have completed 60 credits (or more) by the end of the semester in which the student is applying (typically students apply their second semester sophomore year), 3) Must have 20 hours of volunteer or work service with children ages 0-8 years (experience must have been within the last 5 years), 4) Must have 3 references. All HDFS subject code courses and EDUC subject code courses must be completed with a grade of C or higher. Students will be required to pass a criminal arrest record background check prior to participating in field placement courses. Students will complete a graduation contract with an HDFS Academic Advisor during the first two weeks of the semester in which they are graduating.

**Major in Human Development and Family Studies**

Human Development and Family Studies (HDFS) is an interdisciplinary major focusing on the development of individuals across the lifespan, within the context of family and culture. Students complete foundational coursework in human development (i.e., infancy and childhood, adolescence, emerging and young adulthood, middle and later adulthood/aging) and in the area of family studies. Students become familiar with theory and innovative research in the field and learn to identify diverse factors influencing cognitive, emotional, social, and physical development across the lifespan. Students participate in an internship in order to apply knowledge and skills acquired in foundational coursework. The HDFS major offers five concentrations that enable students to specialize within their degree and prepare for a variety of career paths. In addition to selecting one of five concentrations, students also have the opportunity to work toward the Gerontology Interdisciplinary Minor (http://catalog.colostate.edu/general-catalog/university-wide-programs/interdisciplinary-studies/gerontology-interdisciplinary-minor) or director qualifications in early childhood settings, or apply to the Early Childhood Education Major.

### Learning Outcomes

Students will demonstrate:
• Content knowledge and understanding of theory, research, and practice relevant to optimizing the development, health, and well-being of individuals and families across the lifespan in the context of the larger social environment.
• Effective written and oral communication skills appropriate to the field of human development and family studies.
• The ability to access, critically evaluate, and apply multiple forms of information related to individuals and families.
• Professional and leadership skills with individuals and families, including ethical and culturally sensitive conduct.

Potential Occupations
Graduates with a major in HDFS are prepared to work in a range of human service settings including youth services organizations; early childhood, elementary, adolescent, and parent education programs; health care organizations; juvenile and adult corrections; family and community services; and programs serving older adults, including long-term care facilities. Students interested in teaching human development and family studies content at the secondary level should explore the interdepartmental major in Family and Consumer Sciences, Education Concentration. HDFS graduates are also well prepared to pursue graduate degrees in mental health, behavioral and social sciences, education, health and medicine, or other professional programs.

Some examples of career opportunities with a bachelor’s degree in HDFS include, but are not limited to: early childhood teacher, early childhood administrator, adult recreation programmer, career development specialist, family services specialist, human development specialist, adult education teacher, human resources coordinator, youth agency administrator, community outreach worker, women’s program administrator, youth intervention and prevention program administrator, youth employment, training, and development specialist, parent educator, children-family educator, child protection worker, family assistance worker, program administrator, public relations specialist, youth services worker, case manager, nonprofit agency administrator, and residential center manager.

To help guide students in their career planning, there are five concentrations within the Human Development and Family Studies major. The HDFS Major Program of Study consists of the HDFS foundational courses, which are required for all students regardless of concentration, 15 credits selected from the list of courses within students’ chosen concentration, and additional electives to reach 120 credits as required for graduation. Students must declare a minimum of one concentration and may not declare more than two concentrations in the HDFS major. The declared concentration(s) are listed on the students’ transcripts and thus indicate specialized training within the HDFS degree program.

Human Development and Family Studies Concentration
The Human Development and Family Studies Concentration is a general concentration that is available to HDFS majors who do not choose one of the more specific concentrations. This general concentration is an excellent choice for students who are interested in a lifespan or more general focus in HDFS and are not seeking the specialized training offered in the other four concentrations. Students choosing this concentration will be preparing to enter a variety of different careers or graduate programs, as outlined above. The curriculum includes primarily HDFS, psychology, and social work courses as well as selected courses from other disciplines for a well-rounded and robust education in human development and family studies. By selecting this concentration, students have an opportunity to participate in a variety of experiential learning courses and internship options as they explore and prepare for their career path and additional credentialing options. Please note that the HDFS general concentration does not appear on students’ transcripts.

Early Childhood Professions Concentration
The courses in the Early Childhood Professions Concentration prepare students for careers in early childhood education as well as professional work with children across a variety of settings, including working with children with special needs. This concentration is an ideal choice for first and second year HDFS majors who plan to apply to the competitive on-campus Early Childhood Education Major during their sophomore year. Additionally, this concentration is the preferred choice for students interested in the early childhood education careers that do not require teacher licensure, or for students who will pursue a graduate degree and licensure in childhood education. Students interested in working with children with special needs, those seeking director qualifications in early childhood education, and those seeking other relevant credentials would also benefit from choosing this concentration. The curriculum incorporates courses from several disciplines that focus on early child development, education, diversity, and professional skills.

Pre-Health Professions Concentration
Many students pursuing an HDFS degree plan to apply to graduate or professional programs in a variety of health professions. The Pre-Health Professions Concentration prepares students for these careers and supports their goals of obtaining graduate training. Some of the careers students in this concentration pursue are: allied health practitioner, anesthesiologist assistant, child life specialist, chiropractor, dentist, medical doctor, music therapist, naturopathic or complementary medicine practitioner, nurse, occupational therapist, optometrist, pharmacist, physical therapist, physician’s assistant, podiatrist, speech and language pathologist, or veterinarian. The courses within this concentration include a focus on science and also help prepare students to work with individuals (and their families) with disabilities, mental and physical illness, or those experiencing death, dying, or grief. In addition, students in this concentration are strongly encouraged to consult with pre-professional advisors in the Center for Advising and Student Achievement for specific course (and corresponding course prerequisite) recommendations based on the credentials that they are pursuing, as the prerequisite requirements vary for graduate and professional programs.

Prevention and Intervention Sciences Concentration
The Prevention and Intervention Sciences Concentration is designed for students who are preparing for careers in the helping and human services professions such as counselors, educators, and social service providers, as well as for students seeking a research career in human development and family studies or a related field. This concentration is an excellent choice for students interested in careers requiring either a bachelor’s degree or additional credentials. Concentration coursework emphasizes evidence-based programs, and students will learn how to design and implement community-based prevention and intervention programs for youth, adults, and families. Students can either focus on a specific aspect of the lifespan or choose courses across the lifespan.

Leadership and Entrepreneurial Professions Concentration
The Leadership and Entrepreneurial Professions Concentration guides students who are preparing for entry-level or long-term leadership positions in organizations that promote the optimal development of individuals and families. Students in this concentration may intend
to work in organizations as directors, managers, or owners. This concentration includes coursework in finance, management, marketing, public policy, professional communication, and leadership. This concentration is also appropriate for students preparing for careers in legal services, such as lawyers or politicians. Students in this concentration may choose to pursue additional credentials in leadership, business and entrepreneurship.

Online Degree Program

The HDFS major is offered in two formats, both leading to a Bachelor of Science degree. We offer on-campus classes to local degree-seeking students, and we also offer the HDFS degree online through CSU Online (http://www.online.colostate.edu). The Online Bachelor of Science Degree in HDFS (http://www.online.colostate.edu/degrees/hdfs) provides a world-class university education that is flexible, convenient, and accessible for working and distance students. The HDFS courses are the same in the online degree program as they are in the on-campus program, with many of the same faculty teaching both courses. The five HDFS concentrations are available online with only some limitations, as not all CSU courses are available online. The online Bachelor of Science degree in HDFS carries the full accreditation of CSU and is indistinguishable on student transcripts from the on-campus version of the degree.

1. Of the 12 required credits of concentration courses, a minimum of 6 credits must be HDFS courses and a minimum of 9 credits must be upper-division (300- to 400-level). Courses may not double-count for more than one HDFS concentration.

2. Students with substantial career-relevant experience may petition to replace HDFS 488B with a three-course upper-division cognate defined with and approved by the advisor. The additional 1-4 credits required for the cognate can be double-counted as electives but not as concentration courses.

3. Select enough elective credits to bring the program to a minimum of 120 credits, of which at least 42 must be upper-division (300- to 400-level).

4. Courses selected to fulfill All-University Core Curriculum (AUCC) requirements may not double count toward the Early Childhood Professions Concentration Course requirement.

Major Completion Map

Distinctive Requirements for Degree Program:
Human Development and Family Studies is an open-entry major for freshmen. For sophomores and above, students must complete and/or be enrolled in HDFS 101, PSY 100 or SOC 100 in order to declare HDFS. HDFS subject code courses must be completed with a grade of C or higher. Students will be required to pass a criminal arrest record background check prior to participating in the internship course their senior year. The internship comprises the HDFS 477 and HDFS 488B (requires a background check through CBI, FBI) courses which must be taken concurrently. Students will complete a graduation contract with an HDFS Academic Advisor during the first two weeks of the semester in which they are graduating.

**Major in Human Development and Family Studies, Pre-Health Professions Concentration**

Many students pursuing an HDFS degree plan to apply to graduate or professional programs in a variety of health professions. The Pre-Health Professions Concentration prepares students for these careers and supports their goals of obtaining graduate training. Some of the careers students in this concentration pursue are: allied health practitioner, anesthesiologist assistant, child life specialist, chiropractor, dentist, medical doctor, music therapist, naturopathic or complementary medicine practitioner, nurse, occupational therapist, optometrist, pharmacist, physical therapist, physician's assistant, podiatrist, speech and language pathologist, or veterinarian. The courses within this concentration include a focus on science and also help prepare students to work with individuals (and their families) with disabilities, mental and physical illness, or those experiencing death, dying, or grief. In addition, students in this concentration are strongly encouraged to consult with pre-professional advisors in the Center for Advising and Student Achievement for specific course (and corresponding course prerequisite) recommendations based on the credentials that they are pursuing, as the prerequisite requirements vary for graduate and professional programs.

Major in Human Development and Family Studies, Prevention and Intervention Sciences Concentration

The Prevention and Intervention Sciences Concentration is designed for students who are preparing for careers in the helping and human services professions such as counselors, educators, and social service providers, as well as for students seeking a research career in human development and family studies or a related field. This concentration is an excellent choice for students interested in careers requiring either a bachelor's degree or additional credentials. Concentration coursework emphasizes evidence-based programs, and students will learn how to design and implement community-based prevention and intervention programs for youth, adults, and families. Students can either focus on a specific aspect of the lifespan or choose courses across the lifespan.

1 Of the 15 credits of concentration courses, a minimum of 9 credits must be HDFS courses and a minimum of 12 credits must be upper-division (300- to 400-level). Courses may not double-count for more than one HDFS concentration.

2 Students with substantial career-relevant experience may petition to replace HDFS 488D with a three-course upper-division cognate defined with and approved by the advisor. The additional 1-4 credits required for the cognate can be double-counted as electives but not as concentration courses.

3 Select enough elective credits to bring the program to a minimum of 120 credits, of which at least 42 must be upper-division (300- to 400-level).

Master of Science in Human Development and Family Studies, Plan A, Marriage and Family Therapy Specialization

The Marriage and Family Therapy (MFT) specialization, which is accredited by the Commission on the Accreditation of Marriage & Family Therapy Education (http://coamfte.org/iMIS15/coamfte/home.aspx), provides a specific professional curriculum that prepares graduates for licensure as Marriage and Family Therapists. Courses focus on individual and family development, evidence-based clinical practices, social-justice frameworks, and research methods. MFT students also complete a thesis. Training includes practica and internships with live supervision in the CSU Center for Family and Couple Therapy (http://www.cft.chhs.colostate.edu) as well as Campus Connections: Therapeutic Mentoring At Risk Youth (http://www.hdfs.chhs.colostate.edu/students/undergraduate/campusconnections) and other clinical programs. MFT graduates go on to work as therapists in private practice or at for-profit and non-profit mental health agencies. Some students enter doctoral programs upon graduation, including our Ph.D. in Applied Developmental Science (http://catalog.colostate.edu/general-catalog/colleges/health-human-sciences/human-development-family-studies/applied-developmental-science-phd).

Master of Science in Human Development and Family Studies, Plan A, Prevention Science Specialization

Coursework in the Prevention Science specialization focuses on the processes of lifespan development and normative family functioning, as well as theories of prevention science and risk and resilience. Students gain skills such as program planning and evaluation, program administration, grant writing, research design, and technical communication. Graduates of the Prevention Science specialization enter careers in program evaluation, policy analysis, education, the non-profit sector, and the management of prevention and intervention programs in human services. For students who are interested in prevention-oriented research careers, this specialization articulates well with related doctoral programs, including our Ph.D. in Applied Developmental Science (http://catalog.colostate.edu/general-catalog/colleges/health-human-sciences/human-development-family-studies/applied-developmental-science-phd).

Ph.D. in Applied Developmental Science

The Ph.D. program in Applied Developmental Science (ADS) emphasizes how research regarding basic processes in human development can be used to prevent problems and enhance well-being across the lifespan. Students gain knowledge in lifespan human development theory, empirical research skills to conduct high-quality basic and applied research, and the abilities to translate science into practices and programs that address a wide range of social and public health problems. Graduates from the ADS program have the basic knowledge and the applied skills to work in settings such as academia, for-profit and not-for-profit research and advocacy organizations, governmental and human services agencies, or community agencies with programs designed to enhance health and well-being of individuals, families, and communities.

Students can enter the ADS program with a completed master’s degree or with a completed bachelor’s degree. Students entering with a bachelor’s will be required to complete a master’s in Human Development and Family Studies (HDFS), with a specialization in Prevention Science (http://catalog.colostate.edu/general-catalog/colleges/health-human-sciences/human-development-family-studies/plan-a-ms-human-development-family-studies-prevention-science-specialization) or Marriage and Family Therapy (http://catalog.colostate.edu/general-catalog/colleges/health-human-sciences/human-development-family-studies/plan-a-ms-human-development-family-studies-marriage-therapy-specialization).

Major in Social Work
Social work is distinguished by a tradition of concern for people and their interactions with society. Social work professionals are community problem solvers who intervene in organizational settings, communities, social service agencies, groups, individuals, and families with goals of enhancing well-being and promoting social and economic justice. Most social workers are employed in fields such as child welfare and family services, mental health, medical social work, school social work, corrections, community organization, or advocacy.

The Social Work curriculum focuses on the practical application of social work principles, policies, and practices within human rights and social justice perspectives. Students acquire a professional social work foundation transferable to different settings, population groups, and problem areas. Attention is devoted to understanding the social welfare system in the U.S., and working with individuals, families, and communities to affect desired change. Several practical experiences are required. Students work with an agency participant throughout their sophomore year, and then as seniors, participate in a social work agency internship. The curriculum also includes a strong liberal arts base in social science research and statistics, arts, humanities, social science, and natural sciences.

CSU students are admitted to the School of Social Work (SSW) when they declare Social Work as a major. Two professional organizations, The National Association of Social Workers (NASW) and the Council on Social Work Accreditation (CSWE) guide social work practice and education. The NASW develops the Code of Ethics for practicing social workers. The CSWE accredits bachelor and master social work educational programs in the United States. The BSW program is accredited by CSWE.

Student Expectations for Progression:

• Maintain a minimum GPA of 2.500 in SOWK course work; a grade of C- or better in all SOWK coursework; 2.000 in overall university course work; 2.000 in All University Core Curriculum (AUCC) course work.

• Demonstrate conduct that complies with the CSU Student Code of Conduct.

• Demonstrate conduct that adheres to the NASW Code of Ethics and social work values in interactions with faculty, peers, the community, organizations and clients.

• Remain free of criminal convictions while enrolled in the SSW and CSU.
• Refrain from substance use that interferes with the performance of responsibilities to clients and agencies and/or interferes with classroom performance.
• Demonstrate behavior that prioritizes the welfare of those to whom the student has a responsibility such as clients and coworkers.
• Refrain from any behaviors that cause harm to clients, including romantic or sexual relationships.
• Demonstrate respect for all persons and appreciation for race, age, color, religion, national origin or ancestry, sex, gender, disability, veteran status, genetic information, sexual orientation, or gender identity or expression.
• Demonstrate sound judgment, both in work with clients and in regard to oneself, such as seeking professional help for physical and emotional problems that interfere with professional functioning.
• Demonstrate honesty and integrity in work with client systems and in the classroom.

Review Process
Concerns regarding a student’s application for progression will be reported to the Director of the BSW Program. Concerns may be identified during the Progression in the Major application review process or at any time before or after progression. Progression applications will be reviewed by the Director of the BSW Program. Concerns regarding any of the foregoing student expectations will be addressed by the BSW Director directly with the student and the student’s advisor. Major concerns regarding the student’s ability to proceed in the program will be reviewed by the Director of the BSW program with the administrative team of the SSW, including but not limited to the Director of the BSW. A meeting will then be scheduled for review of the concerns with the student, faculty member(s) involved, the Director of the BSW Program and the Director of SSW. Review of concerns may result in one or more of the following resolutions, through the Director of SSW:
• Dismissal or resolution of the expressed concerns.
• A probationary period which includes a remediation contract with the student to address concerns that will be monitored by the BSW Program Director or designated faculty.
• Dismissal of the student from the Social Work major.
• A report to the CSU Office of Conflict Resolution and Student Conduct Services, in the event the concerns include possible violations of the Student Conduct Code.

Students may appeal these decisions using established university and SSW procedures.

Practicum and Internship
Students directly apply classroom knowledge, skills, and social work values through a six-credit supervised practicum, SOWK 286A and SOWK 286B, in the sophomore year. In this practicum, students are matched with community agencies which require background checks before placement.

In the senior year, students fulfill a 10-credit field placement in a social work agency or program in a community setting. Field placement agencies generally require background checks also. Examples of available field placements include child and public welfare programs; hospitals, homeless and women’s shelters, rehabilitation and mental health agencies, schools, adolescent residential care, geriatric centers, and correction programs. In their field placement and under supervision, students have the opportunity to demonstrate the required CSWE competencies.

**Master of Social Work**

The Master of Social Work degree offered by CSU features a nationally recognized advanced generalist curriculum that is accredited by the Council on Social Work Education (CSWE). Students are prepared for roles as social work practitioners in complex, diverse, and dynamic settings and learn to promote human rights and individual, community, and global health and well-being. The School of Social Work offers different program options for completing the MSW degree. There are full-time and part-time campus-based programs, part-time distance learning options, and a dual degree MSW-MPH. All of our program options utilize a cohort model.

1. **Full-time two year** – This is the standard two year program. It follows the cohort model, starting every fall. Students attend full-time for four semesters - fall, spring, and the following fall and spring on campus, in-person instruction. ([Schedule here](http://www.ssw.chhs.colostate.edu/students/graduate/distanceMSW).)

2. **Part-time three year** – This option begins in fall and takes three years to complete, breaking down the first full-time year into two part-time years. The final year is a full-time year, as the field placement requirement cannot be reduced. The schedule for this final year is identical to the full-time program’s second year.

3. **Advanced Standing On Campus** – This option is available only to those who have earned a BSW from a program accredited by the Council on Social Work Education within the past seven years. The BSW degree must be granted prior to the beginning of advanced standing classes. Students attend one full year consisting of three semesters, starting with the summer term. ([Schedule here](http://www.ssw.chhs.colostate.edu/students/graduate/distanceMSW).)

4. **Distance Learning options** – The School of Social Work also offers a part-time hybrid program that utilizes online and in-person instruction based at the cohort locations of Denver, Colorado Springs, and Boulder/Longmont. For additional information please visit the [Distance MSW Program website](http://www.ssw.chhs.colostate.edu/students/graduate/distanceMSW).
5. **MSW/MPH Dual Degree** – In partnership with Colorado School of Public Health, the School of Social Work will be offering a dual degree MSW/MPH program. For information visit the [MSW/MPH section](#).

College-Wide Graduate Programs

Master's Programs
Master in Arts Leadership and Cultural Management, Plan C

The College of Liberal Arts aims to educate committed and active citizens and to develop in them an understanding of humans, including their history, literature, and art; their social, political, and economic systems; and their relationship to the environment. The College offers courses in the arts, humanities, and social sciences, which constitute the foundation of a liberal arts education.
College Programs

Undergraduate majors lead to one of three degrees: Bachelor of Arts, Bachelor of Fine Arts, or Bachelor of Music. Descriptions of the specific departmental and interdepartmental majors and concentrations in the College of Liberal Arts are located in the following pages.

Students should consider simultaneously completing the requirements of a second major or a departmental or interdisciplinary minor, either in the College of Liberal Arts or in another college. With careful planning, numerous combinations are possible within four years of study.

The minimum scholastic average acceptable for graduation in any college program is a 2.000 average in all major courses in addition to the university’s overall grade point average requirement of 2.000 for Colorado State courses.

Undergraduate Career Opportunities and Career Counseling

Graduates from the College of Liberal Arts enter a remarkable variety of careers. Degrees from the College of Liberal Arts prepare students for success in their professional, personal, and civic lives. The skills and dispositions students develop through study in the liberal arts are widely sought. In preparing themselves for future career opportunities students are encouraged to work closely with Academic Support Coordinators, departmental mentors, and career counselors. Through these conversations students will be encouraged to develop resumes, interviewing skills, and articulation of the ways in which their skills will benefit potential employers. Students should also consider participating in internships to gain practical work experience.

Prelaw

Clark C, Room 336B
(970) 491-0704
courtenay.daum@colostate.edu
Prelaw adviser, Dr. Courtenay Daum

Students preparing for law school can choose any major. Law schools seek above-average students with broad educational backgrounds and excellent communication, and analytical skills. Prelaw students, regardless of major, should design a course of study that develops their skills in speaking, writing and analytical capabilities. Law schools require an undergraduate degree for admission. Visit the Department of Political Science (http://politicalscience.colostate.edu/undergraduate/pre-law) for more information.

Education Abroad

Because the knowledge of at least one other culture is valuable in understanding our own, students are encouraged to take a semester or longer to study outside of the United States as part of their overall program at CSU. Students interested in education abroad should plan, far in advance, by discussing opportunities with their advisor and by visiting the Office of International Programs (http://educationabroad.colostate.edu) in Laurel Hall.

Foreign Service Officer Career

Students interested in a career as a foreign service officer may prepare for both the general Foreign Service Officer Examination and the associated language examination within the following majors: economics; history; international studies; journalism and technical communication; languages, literatures, and cultures; liberal arts; political science; or sociology.

Graduate Programs

A variety of liberal arts advanced degrees are available in the College. Academic degrees offered are Doctor of Philosophy, Master of Arts, Master of Science, Master of Fine Arts, and Master of Music. The last two are generally considered professional degrees.

The College offers three interdisciplinary master’s degrees. The Department of Anthropology offers a master’s degree in Anthropology with a specialization in International Development, with courses from across CSU. The Departments of English and Languages, Literatures and Cultures offer a joint master’s program in foreign languages and the teaching of English as a second/foreign language. The LEAP Institute for the Arts offers a Master’s in Arts Leadership and Cultural Management in collaboration with the College of Business, the College of Liberal Arts and others, that prepares students for leadership opportunities within and outside of the creative sector. Information on all three degree programs may be obtained from any participating department.

For detailed information about graduate programs, contact individual departments. See also the Graduate and Professional Bulletin.

### Dual Degree in Engineering Science (B.S.) and International Studies (B.A.)

This is a rigorous and rewarding five-year dual degree program that combines the Engineering Science and International Studies majors. Upon completion, students receive degrees in Engineering Science and International Studies, as well as a foreign language minor. This program is ideal for engineering students with global interests. It provides both the applied expertise as well as the cultural literacy and linguistic competency to succeed in international and multicultural professional environments. In addition to the Engineering Science curriculum, students choose a focus in one of four geographic concentrations (Asia, Europe, Latin America, Middle East/North Africa) as well as a related foreign language. Students in this program also study abroad during their academic career.

#### Requirements

**Effective Spring 2017**

To qualify for graduation, Engineering Science majors must achieve a minimum 2.000 grade point average at CSU in all courses in engineering, mathematics, computer science, statistics, physics, and chemistry as well as courses taken as technical electives.

1 Students are required to participate in the Professional Learning Institute (PLI) program as a requirement for graduation. The program consists of eleven PLI workshops distributed by focus areas as follows: Global and Cultural Diversity (2 workshops), Innovation (2 workshops), Leadership (2 workshops), Civic and Public Engagement (2 workshops), and Ethics (3 workshops). Each workshop is between 1-2 hours long and no outside preparation is required to attend any of the workshops. Attendance at the required workshops may be spread over the student's five year program.

2 Courses are to be selected with the approval of the Engineering advisor. A minimum of 7 credits must be upper-division (300- to 400-level).

3 Each student is required to complete a minor in a foreign language. Contact the Department of Languages, Literatures and Cultures.

4 Students may need to obtain an override in order to register for some courses. For Engineering courses, students should see the appropriate Engineering department. For International Studies courses, students should contact the instructor.
To fulfill the International Studies Course Selection requirement, select a minimum total of 18 credits, of which at least 15 must be upper-division (300- to 400-level), from a minimum of three different subject codes. Students will choose an International Studies geographic option area, and from those course lists select: a minimum of 6 credits from 1) History and Politics; a minimum of 3 credits from 2) Thought and Culture; a minimum of 6 credits from 3) International Studies (list is same for all option areas); and an additional minimum of 3 credits of choice from lists 1, 2, or 3.

Select one course from the list of courses in category 3B of the All-University Core Curriculum (AUCC) except for L*** language courses.

Credit allowed for only one of LCHI 365, LGEN 465B, LJPN 365.

French (LFRE), German (LGER), or Spanish (LSPA) only.

To count toward the International Studies Course Selection, travel abroad must be to a country or area covered by the chosen geographic option.

### Major Completion Map

**Distinctive Requirements for Degree Program:**

**TO DECLARE MAJOR:** Engineering is a controlled major: students are admitted into the major only if they meet established academic standards. Please see competitive major requirements or the advisor in the Department for more information.

**TO PREPARE FOR FIRST SEMESTER:** The curriculum for this major assumes students enter college prepared to take calculus. Students are required to participate in the Professional Learning Institute (PLI) program as a requirement for graduation. The program consists of eleven PLI workshops distributed by focus areas as follows: Global and Cultural Diversity (2 workshops), Innovation (2 workshops), Leadership (2 workshops), Civic and Public Engagement (2 workshops), and Ethics (3 workshops). Each workshop is between 1-2 hours long and no outside preparation is required to attend any of the workshops. Attendance at the required workshops may be spread over the student’s five-year program.

- Applying an interdisciplinary approach to knowledge

**Potential Occupations**

Graduates in International Studies apply their education in a wide variety of careers, including those in international business, nonprofit organizations, academics, public policy, law, government, city planning, engineering, environmental sustainability and clean energy, information systems, journalism, publishing, education, sales and marketing, management and administration, artistic production, mass media, communications, museums, entertainment, foreign service, and many other areas in need of intelligent, well-rounded, and broadly world-educated people. (970) 491-5421
libartsmajor.colostate.edu (http://libartsmajor.colostate.edu)

Kevin Foskin, Director

The Interdisciplinary Liberal Arts major is a degree program combining the humanities, the arts, languages and literature, and social sciences so as to foster interdisciplinary knowledge, core career competencies, personal development, professional excellence, interpersonal confidence and expertise, and a deeper understanding of the complex world in which we live. Interdisciplinary Liberal Arts majors can select between the Interdisciplinary Liberal Arts major and a five-year joint program with dual degrees in Liberal Arts (B.A.) and Engineering Science (B.S.).

To further increase depth and focus, and to enhance expertise and career opportunities, Interdisciplinary Liberal Arts students are required to complete a minor or an interdisciplinary minor from within the College of Liberal Arts.

Learning Outcomes

Students will demonstrate the following skills:

- Writing effectively about the knowledge and perspectives of their field of study, including
  a. organization in a manner that aids the readers' comprehension as well as the writer's purpose;
  b. use of accepted grammatical form, spelling, and punctuation;
  c. use of language in a style that is appropriate to the writer's purpose;
  d. effective support of claims; and
  e. clear citation of information sources.

- Speaking effectively, including
  a. creation of a logically constructed message;
  b. adaptation of that message to a particular audience;
  c. use of accepted grammatical forms of standard American English dialect;
  d. use of appropriate and engaging language; and
  e. use of effective delivery skills.

- Thinking critically about contemporary issues, particularly within their field of study, including
a. description of a policy, position, or artifact;
b. analysis of the policy, position, or artifact by identifying issues or articulating and then applying a critical framework or perspective; and
c. clear articulation and support of conclusions based on that analysis/identification of issues.

**Potential Occupations**

Graduates in Interdisciplinary Liberal Arts apply their education in a wide variety of careers and/or academic professions, including public policy, politics, healthcare, artistic production, mass media, engineering, law, city planning, business, information systems, international business, journalism, publishing, education, sales and marketing, management and administration, government, communications, museum work, entertainment, foreign service, and many others. Many continue on to graduate or professional schools for more specialized study. To enhance their career, academic or professional opportunities, majors are encouraged to participate in paid or volunteer work or internship opportunities.

Graduate Programs in Anthropology

The department offers graduate programs leading to a Master of Arts degree (Plan A thesis option or Plan B portfolio option). It also has a Master of Arts specialization in each of four programmatic areas: Health and Well-Being, Humans and the Environment, International Development and Globalization, and Professional Methods and Techniques. Students may develop a research project or professional program in these programmatic areas, or in any area related to our faculty’s research interests.

Health and Well-Being—Studies the ways that human health and wellness are influenced by past and present sociocultural, environmental, biological, and biocultural forces, by drawing from broad and holistic perspectives on human well-being.

Humans and the Environment—Investigates how past and present human activities influence the environment; the ways ecological and other processes affect human evolution and the human condition today; and the resilience of social and ecological systems.

International Development and Globalization—examines how local societies respond to global influences; the extent to which cultural meanings, beliefs, institutions, structures of inequality, and social relations between genders and among kin are changing as a result; and how processes of economic and community development can improve basic aspects of human welfare.

Professional Methods and Techniques—develops skills in a wide range of methods and techniques used by professionals in applied anthropology, federal and state natural resource agencies, and other arenas of social, historical, biological and spatial research about humans. These include qualitative research and interview protocols, quantitative analysis, GIS and remote sensing, archaeological field survey, historic archaeological methods, culture and heritage resource management, and paleoanthropological methods.

Students interested in graduate work should refer to the Graduate and Professional Bulletin and the department’s website (http://anthropology.colostate.edu).

Major in Anthropology

The mission of the Anthropology Department is to

1. offer and maintain instructional programs that provide a comprehensive overview and analyses of people and their cultures, both past and present;
2. conduct research in order to advance and expand knowledge of the fields of anthropology and geography;
3. participate actively in programs of interdisciplinary research.

The Department of Anthropology houses a faculty of cultural anthropologists, archaeologists, biological anthropologists, and geographers whose scholarship spans the breadth of the human experience. The program prepares undergraduate students to describe, analyze, and interpret the human condition. An examination of the social, environmental, and evolutionary contexts in which the human species is embedded defines most course work in the discipline. The program is integrative, drawing from geography, biology, the humanities, and other social and natural sciences. Geography figures prominently in our program and provides an important spatial lens through which human groups are examined over time. Four programmatic areas define faculty research and scholarship with which students can engage: humans and the environment, international development and globalization, health and well-being, and professional methods and techniques. In the education of undergraduates, the department values and promotes experiential training, primary research, and public engagement and education.

The research endeavors of the anthropology faculty are trans-disciplinary and international, they are interested in diverse topics including but not limited to contemporary culture, ethnicity, linguistics, comparative religion, virtual worlds, subsistence patterns, archaeology, human ecology, human anatomy, evolution, biogeography, land cover/land use patterns, glaciology, and the behavior of non-human primates.

Anthropology majors follow a liberal arts curriculum that provides a broad education with an emphasis on learning how to learn. The department has ten research and teaching laboratories and three summer field schools; the Ethnographic Field School at the Pine Ridge Indian Reservation, the Archaeology Field School, and the Paleontology Field School.

Undergraduate students can pursue a general anthropology degree, learning about the diversity of the human existence from a broad and holistic perspective. Students can also declare a concentration within the program. Declaring a concentration allows for a focused course of study, specializing in the particular subfield of interest. Within each concentration (Archaeology, Biological Anthropology, Cultural Anthropology and Geography), specific categories of classes guide students in learning the major theories, methods, and applications related to modern practice of our discipline. Along with our offerings of world class field schools, archaeological, biological, and ethnographic methods and geographical techniques are encouraged in order to further gain experience and perspective. Upon graduation, students are prepared for jobs or advanced training in graduate school. Students come away with a respect and appreciation for the diversity of human existence.

Learning Outcomes

Students will:

- Demonstrate knowledge related to a basic appreciation of anthropology and its potential including:
  a. respect for the similarities and differences that characterize human cultures over time and across space;
  b. the theoretical perspectives that anthropologists use to comprehend these similarities and differences;
  c. the methods and tools used to describe and analyze them; and
  d. how the relationship between theory, methods, and data intersects.
- Integrate anthropological concepts across subfields or with other social sciences and humanities disciplines, and articulate their anthropological understandings through papers written and presented during their senior year.
- Use what they have learned in their anthropology courses in future activities after graduation.

Potential Occupations

Anthropology, like many majors in the liberal arts, provides students with a broad academic background suitable for a variety of jobs in the public and private sectors. Anthropology majors are trained to think independently and critically, communicate effectively, and function in a multicultural world. Employers appreciate liberal arts majors for their multiple skills and their ability to adapt to a variety of tasks and work environments. Participating in internships and cooperative education opportunities is highly recommended to enhance students’ practical training and development. Careers for graduates are available in international development, health care, education, business, natural resource management, and government. Graduates who go on for advanced studies can pursue careers in anthropology or attain advanced positions with the possibility of rising to top professional levels.

Some career opportunities for anthropology graduates include, but are not limited to: museum curator/researcher, genealogist, international relief representative, salvage archaeologist, collections assistant, resource specialist, classical or historical anthropologist, cultural affairs officer, diplomatic service representative, immigration or foreign service officer, linguist, educational television researcher, forensic osteologist, biographical writer, scientific/technical writer, reporter, ethnographic photographer, anthropological linguist, rural development worker, ethnic groups’ special concerns advocate, intercultural educator, medical
anthropologist, grant writer, psychological anthropologist, international development administrator, public relations representative, public opinion pollster, sales/marketing representative, consultant for cross-cultural relations, personnel worker, geographic information systems specialist.

Total Credits 15-16
Program Total Credits: 28-29

1. ANTH 100 fulfills category 3C in the All-University Core Curriculum (AUCC). Taking ANTH 100 in the freshman year will eliminate the requirement for 3 credits of Social and Behavioral Sciences in the sophomore year. If ANTH 200 is chosen in the freshman year instead, then 3 credits of Social and Behavioral Sciences will be required in the sophomore year, selected from the list of courses in category 3C of the AUCC.

2. ANTH 200 fulfills AUCC category 3E. Taking ANTH 200 in the freshman year will eliminate the requirement for 3 credits of Global and Cultural Awareness in the sophomore year. If ANTH 100 is chosen in the freshman year, then 3 credits of Global and Cultural Awareness will be required in the sophomore year, selected from the list of courses in category 3E of the AUCC.

3. Additional Humanities courses taken in the freshman and senior years for a total of six credits must include two subject codes, selected from among the following: ART, D, CO, E, ETST 430, L***, LB 192 (Arts and Humanities sections only), MU, PHIL, SPCM, TH.

4. Select 6 credits including two subject codes from the following: AA, BMS, BIO, BZ, CHEM, GEOL, GR 210, LIFE, MATH, NR, NSCI, PH, SOC, and STAT.

5. Select a total of 9 credits over the sophomore, junior and senior years as shown and including at least two subject codes from the following: ECON, HIST, JTC, POLS, PSY, SOC, LB 192 (social science sections only), ETST (except ETST 430).

6. ANTH 493 must be taken concurrently with one of the AUCC 4A cultural anthropology courses listed with ANTH 493 in the senior year. Using Competencies (AUCC 4A) must be taken concurrently with ANTH 493. Courses approved for AUCC category 4A taken in the sophomore, junior, or senior year and not concurrently with ANTH 493 and not included in the approved list in the program will not count toward completion of the 4A requirement for this major. Students taking Senior Honors Thesis (HONR 499, 3 credits) also are required to register for ANTH 493 (1 credit).

7. Select enough elective credits to bring the program total to a minimum of 120 credits, of which at least 42 must be upper-division (300 to 400-level).

Major in Anthropology, Biological Anthropology Concentration

Over the past half century biological anthropology has undergone tremendous change from a discipline that was defined by a descriptive, typological approach to human morphology to one that includes both experimental and comparative analyses in a population based framework.

Biological anthropologists continue to cross traditional disciplinary boundaries and interact with both the physical and natural sciences, including biology, anatomy, genetics, chemistry, biometry, or endocrinology as well as the social sciences.

The expertise of existing faculty in Biological Anthropology at CSU includes:

- Human skeletal biology
- Evolutionary theory
- Neanderthal paleobiology and paleobiogeography
- Dental anthropology
- Public Health
- Early hominid feeding ecology
- Taphonomy
- Plio-Pleistocene Africa
- Pleistocene Asia

Special resources include the Paleoanthropology and Zooarchaeology lab, the Human Origins Lab and the Bioanthropology Lab. Existing faculty also have geographic foci significant to their research. Research areas include Uzbekistan, Kazakhstan, Tanzania, and Mexico.

1. ANTH 100 fulfills All-University Core Curriculum (AUCC) category 3C. Taking ANTH 100 in the freshman year will eliminate the requirement for 3 credits of Social and Behavioral Sciences in the sophomore year. If ANTH 200 is chosen in the freshman year instead, then 3 credits of Social and Behavioral Sciences will be required in the sophomore year, selected from the list of courses in category 3C of the AUCC.

2. ANTH 200 fulfills AUCC category 3E. Taking ANTH 200 in the freshman year will eliminate the requirement for 3 credits of Global and Cultural Awareness in the sophomore year. If ANTH 100 is chosen in the freshman year instead, then 3 credits of Global and Cultural Awareness will be required in the sophomore year, selected from the list of courses in category 3E of the AUCC.

3. Additional Humanities courses taken in the freshman and senior years for a total of six credits must include two subject codes, selected from among the following: ART, D, CO, E, ETST 430, L**, LB 192 (Arts and Humanities sections only), MU, PHIL, SPCM, TH.
Select a total of 9 credits over the sophomore, junior and senior years as shown, and including at least two subject codes, from the following: ECON, HIST, JTC, POLS, PSY, SOC, LB 192 (social science sections only), ETST (except ETST 430).

Capstone topic must focus on geography. ANTH 493 must be taken concurrently with one of the AUCC 4A anthropology courses listed with ANTH 493 in the senior year. Using Competencies (AUCC 4A) must be taken concurrently with ANTH 493. Courses approved for AUCC category 4A taken in the sophomore, junior, or senior year and not concurrently with ANTH 493 and not included in the approved list in the program will not count toward completion of the 4A requirement for this major. Students taking Senior Honors Thesis (HONR 499, 3 credits) are also required to register for ANTH 493 (1 credit).

Select enough elective credits to bring program total to a minimum of 120 credits, to which at least 42 must be upper-division (300- to 400-level).

**Major in Anthropology, Cultural Anthropology Concentration**

The Cultural Anthropology concentration focuses on contemporary experiences of culturally distinct communities encountering a rapidly globalizing political economy. Students are provided with robust training in mixed methods, community-based approaches, and applied anthropology. Topically, faculty investigate issues related to the transformation of individual experience and community relations within the context of economic development, governmental and nongovernmental policy, and environmental change. Increasingly, faculty seek to understand the way subjective and material well-being are impacted by the rapidly changing contexts of modernity. Topics of research interest include:

- Human-Environment Interactions
- Community and Economic Development
- Health and Well-Being
- Cultural Psychiatry
- Disasters and Resilience
- Gender
- Culture Continuity and Change

Passionate about teaching, faculty strive to bring excitement and relevance to the classroom by infusing it with their practical field experiences. Cultural faculty conduct their research in India, Southeast Asia, Central Asia, East Africa, the Caribbean, New Orleans, Native North America, and in virtual reality. Students concentrating in Cultural Anthropology explore issues of place and space, cultural theory, cultural content and methods.

**Major in Anthropology, Geography Concentration**

Geography at CSU focuses on providing undergraduate students with a broad background in geographic thinking with an emphasis on the traditional geographic focus of understanding dynamic interaction between humans and the environment in an era of rapid global change. Faculty use a wide range of research methods including geographic information systems (GIS), remote sensing, spatial modeling, and dendrochronology to address applied research questions in Colorado, the Rocky Mountains, Southeast Asia, Mesoamerica, Melanesia, and southern South America. Research focus areas include:

- Climate change implications for society and ecosystems
- Land-use and land-cover change
- Biogeography

A concentration and minor in Geography are degree options within the Department of Anthropology. Current courses offered range from introductory courses that introduce students to geography and the two main branches of cultural and physical geography, to advanced courses which focus on methods (e.g. spatial analysis and GIS, remote sensing) and topical subjects such as climate change, forest ecology, mountain geography, the geography of commodities, and land change science.

2 ANTH 200 fulfills AUCC category 3E. Taking ANTH 200 in the freshman year will eliminate the requirement for 3 credits of Global and Cultural Awareness in the sophomore year. If ANTH 100 is chosen in the freshman year instead, then 3 credits of Global and Cultural Awareness will be required in the sophomore year, selected from the list of courses in category 3E of the AUCC.

3 Anthropology Humanities courses taken in the freshman and senior years for a total of six credits must include two subject codes, selected from among the following: ART, D, CO, E, ETST 430, L**, LB 192 (Arts and Humanities sections only), MU, PHIL, SPCM, TH.

4 Select 7 credits including two subject codes and at least one formal laboratory from the following: AA, BMS, BIO, BZ, CHEM, GEOL, LIFE, MATH, NR, NSCI, PH, SOCR, and STAT.

5 Select a total of 9 credits over the sophomore, junior and senior years as shown, and including at least two subject codes, from the following: ECON, HIST, JTC, POLS, PSY, SOC, LB 192 (social science sections only), ETST (except ETST 430).

6 Capstone topic must focus on geography. ANTH 493 must be taken concurrently with one of the AUCC 4A anthropology courses listed with ANTH 493 in the senior year. Using Competencies (AUCC 4A) must be taken concurrently with ANTH 493. Courses approved for AUCC category 4A taken in the sophomore, junior, or senior year and not concurrently with ANTH 493 and not included in the approved list in the program will not count toward completion of the 4A requirement for this major. Students taking Senior Honors Thesis (HONR 499, 3 credits) are also required to register for ANTH 493 (1 credit).

7 Select enough elective credits to bring program total to a minimum of 120 credits, of which at least 42 must be upper-division (300- to 400-level).

Minor in Anthropology

Anthropology focuses on a cross-cultural view of humanity, and broadly conceived dimensions of human behavior. Description and explanation of human activities in other societies provide a sense of perspective for individuals operating within their own culture. A minor may be focused on one or more of the sub-disciplinary divisions such as biology, archaeology, cultural anthropology, or applied anthropology; or it may be distributed across the fields like the major requirements.

Requirements  
Effective Fall 2001

Students must satisfactorily complete the total credits required for the minor. Minors and interdisciplinary minors require 12 or more upper-division (300- to 400-level) credits.

Additional coursework may be required due to prerequisites.

Minor in Geography

The minor in Geography examines the critical interactions among space, place, people and the built and natural environment to interpret the spatial and temporal distribution of features and processes, applying spatial techniques and information technologies such as Geographic Information Systems (GIS) and remote sensing.
Requirements
Students must satisfactorily complete the total credits required for the minor. Minors and interdisciplinary minors require 12 or more upper-division (300- to 400-level) credits.

Additional coursework may be required due to prerequisites.

Master of Arts in Anthropology

Plan A
The thesis option must consist of a minimum of 30 semester credits of course work concentrated in anthropological areas relevant to the participant's professional goals. The thesis is the culmination of a research project carried out by the student under the guidance of his or her advisor. A final examination consists of a defense of the thesis, as well as other parts of the program of study.

Plan B
The non-thesis option is intended for students seeking development of an understanding of anthropology which will allow them to move on to a PhD program in anthropology, or be incorporated in their work. Plan B students are expected to take a more broadly distributed series of courses and to show less specialization than that which characterizes Plan A programs of study.

Requirements for Plan B are a minimum of 36 credits of study. Students must complete a portfolio of work demonstrating both the breadth of their understanding of anthropology and their own area of specialization, selected in consultation with the student's advisor. A final examination consists of a defense of the portfolio, as well as other parts of the program of study.

Ph.D. in Anthropology

A Ph.D. in anthropology at CSU will be unique in that it will support advanced coursework and research with a focus on place, space, and adaptation. Students will achieve this perspective on the discipline by engaging with a curriculum infused with geographic methods and approaches. This program will provide prospective students with the skills and expertise to address research questions that 1) sit at the intersection of anthropology and geography; 2) apply geographic methods to anthropological questions; and 3) critically evaluate the impact of place and space on human/ecosystem adaptation. In this regard, the Department of Anthropology at CSU will forge a new path for graduate level instruction and research in anthropology; creating a niche that will provide our students with the ability to ask meaningful questions and examine those questions with a set of techniques that also trains them to work outside of academia. The relationships between place, space, and adaptation can be examined at different scales and temporal contexts. These variables also influence health and wellness, group security, ecosystem and human viability, and cultural vitality.

Throughout history, art has been a fundamental language of the human spirit. Visual arts express human experience through an ever-widening range of media and materials, some of which include: oils, acrylics, pastels, charcoal, clay, plaster, steel, bronze, wood, copper, litho stones, and digital media. Visual artists create abstract works and images of objects, people, nature, topography, and events. The Department of Art and Art History offers several options of study. The B.F.A. (Bachelor of Fine Arts) degree in studio art and the B.A. (Bachelor of Arts) degree in art history, art education, or studio art are all professional degrees, leading to related art careers.

### Learning Outcomes

Students will demonstrate:

- Fundamental knowledge and mastery of media and processes necessary to communicate meaning in a work of art.
- Ability to communicate clearly about their own art and the art of others.
- Knowledge about contemporary art and motivation to view and discuss current local, regional, and national exhibitions. Students will be versed on contemporary art would:
  - regularly read reviews of exhibitions in local and national newspapers;
  - regularly read art periodicals;
  - attend multiple exhibitions; and
  - be knowledgeable about contemporary artists in their discipline (i.e., nationally known painters, sculptors, etc.).

### Potential Occupations

Art graduates possess a number of transferable communication, analytical, and critical thinking skills appropriate for work in traditional business as well as positions in academia and roles as freelance artists, graphic designers, art educators, art historians, studio fine artists and as “creatives” in government and industry. Many employers appreciate art majors for their multiple skills and their ability to adapt to a variety of tasks and work environments. Participation in internships, cooperative education, and service learning opportunities is highly recommended to enhance practical training and development. Graduates who go on for advanced studies can attain more responsible positions with the possibility of rising to top professional levels.

Depending on student interests, the electives taken, or the concentration selected, available career choices include, but are not limited to: art appraiser, art director, art therapist, exhibit designer, art critic, jeweler, gallery director, graphic design artist, free lance artist, sculptor, woodworker, welder, foundry worker, studio photographer, technical illustrator, painter, textile designer, weaver, art educator, art historian, art curator, art librarian, art museum educator, web page designer, photo lab technician, art restorer, and master printer.

### Bachelor of Fine Arts (B.F.A.)

The B.F.A. degree is a professional program for careers in studio art. Students have an opportunity to concentrate in one of ten studio fields: Drawing, Electronic Art, Graphic Design, Fibers, Metalsmithing, Painting, Photo Image Making, Pottery, Printmaking, and Sculpture. The curriculum progression in the department is similar within the concentrations and some concentrations may have restrictions. Freshmen study foundation courses in the fine arts, which include two-dimensional and three-dimensional foundations, drawing, and art history. Sophomores explore various concentration courses and become familiar with the studio practices for the concentration studios housed in separate wings that feature large, well-equipped studio spaces designed for exploration of work in a specific media. Juniors and seniors focus on advanced topics...
in their chosen concentration by taking one upper-division course in their chosen field each semester.

1 Select from the list of courses (other than ART 100) in category 3B in the All-University Core Curriculum (AUCC). Only 3 of the 6 credits required for Arts and Humanities may come from intermediate (L*** 200 and L*** 201) foreign language courses.

2 Select 6 credits of Upper-Division Art History Courses total, at least 3 of which must satisfy AUCC categories 4A and 4B.

3 ART 470 and ART 471 may be repeated for up to 8 credits each; 4 credits of each course are required in the Senior year for AUCC category 4C. If ART 470 or ART 471 are repeated for credit, the second 4 credits taken in each course may count toward the Art Elective or the Upper-Division Art Elective requirements.

4 Select enough elective credits to bring the program total to a minimum of 120 credits, of which at least 42 must be upper-division (300- to 400-level).

**Major in Art, B.A.**

Throughout history, art has been a fundamental language of the human spirit. Visual arts express human experience through an ever-widening range of media and materials, some of which include: oils, acrylics, pastels, charcoal, clay, plaster, steel, bronze, wood, copper, litho stones, and digital media. Visual artists create abstract works and images of objects, people, nature, topography, and events. The Department of Art and Art History offers several options of study. The B.F.A. (Bachelor of Fine Arts) degree in studio art and the B.A. (Bachelor of Arts) degree in art history, art education, or studio art are all professional degrees, leading to related art careers.

**Learning Outcomes**

Students will demonstrate:

- Fundamental knowledge and mastery of media and processes necessary to communicate meaning in a work of art.
- Ability to communicate clearly about their own art and the art of others.
- Knowledge about contemporary art and motivation to view and discuss current local, regional, and national exhibitions. Students well versed on contemporary art would:
  a. regularly read reviews of exhibitions in local and national newspapers;
  b. regularly read art periodicals;
  c. attend multiple exhibitions; and
  d. be knowledgeable about contemporary artists in their discipline (i.e., nationally known painters, sculptors, etc.).

**Potential Occupations**

Art graduates possess a number of transferable communication, analytical, and critical thinking skills appropriate for work in traditional business as well as positions in academia and roles as freelance artists, graphic designers, art educators, art historians, studio fine artists and as “creatives” in government and industry. Many employers appreciate art majors for their multiple skills and their ability to adapt to a variety of tasks and work environments. Participation in internships, cooperative education, and service learning opportunities is highly recommended to enhance practical training and development. Graduates who go on for advanced studies can attain more responsible positions with the possibility of rising to top professional levels.

Depending on student interests, the electives taken, or the concentration selected, available career choices include, but are not limited to: art appraiser, art director, art therapist, exhibit designer, art critic, jeweler, gallery director, graphic design artist, free lance artist, sculptor, woodworker, welder, foundry worker, studio photographer, technical illustrator, painter, textile designer, weaver, art educator, art historian, art curator, art librarian, art museum educator, web page designer, photo lab technician, art restorer, and master printer.

**Concentrations**

- Art Education Concentration
- Art History Concentration
- Integrated Visual Studies Concentration
- Studio Concentration

**Major in Art (BA), Art Education Concentration**

The Art Education concentration embraces the artist-teacher concept, which allows students to develop a studio concentration while preparing to teach art at the K-12 level. The program is comprehensive, meaning students take course work to prepare them to teach at the elementary and secondary school levels. One full semester of student teaching at both the elementary and secondary levels is preceded by in-depth field work with elementary, secondary, and exceptional populations. The Art Education program enjoys good working relationships with school districts in the state of Colorado. Students integrate studio, art history, criticism, and aesthetics as they observe and teach—through a variety of experiences— in the public schools.

Students interested in pursuing a teaching license through CSU may refer to the Center for Educator Preparation (CEP) (http://cep.chhs.colostate.edu/students/teacher/admissions.aspx).
Art Education students must maintain a 2.75 cumulative GPA for admission to the Art Education program, eligibility for student teaching placement, and licensure.

### Requirements

**Effective Fall 2016**

A minimum grade of C (2.000) must be achieved in each upper-division art course in the student's concentration. The minimum scholastic average acceptable for graduation is 2.000 computed only for courses attempted at CSU.

**Major in Art (BA), Art History Concentration**

Art History provides a basic preparation in art history for graduate studies; careers in research and teaching at the college level; for positions in museums, libraries, or private collections; or for writing and criticism in the arts. In addition to a high degree of research experience students will complete a second field or minor and one year of foreign language. Graduate studies or advanced-level classes are necessary for advancement. In-depth study in a second field allows students to refine their focus.

**Requirements**

**Effective Fall 2016**

A minimum grade of C (2.000) must be achieved in each upper-division art course in the student's concentration. The minimum scholastic average acceptable for graduation is 2.000 computed only for courses attempted at CSU.

Major in Art (BA), Integrated Visual Studies Concentration

The Major in Art, Integrated Visual Studies Concentration is ideal for students to develop skills as makers and thinkers by taking an equal ratio of studio and academic classes that foster critical awareness of how society is reflected and produced through visual means in the twenty-first century.

By making work and interpreting images from art, photography, film, television and commercial imagery, students learn to analyze visual communication from a variety of aesthetic, theoretical, scientific, economic, sociological and historical viewpoints. A combination of studio and academic classes are required. The Bachelor of Arts, Integrated Visual Studies Concentration enables students to organize multiple approaches to visual thinking that cut across various disciplines into a logical whole. Integrated Visual Studies students will have the curricular flexibility to pursue other academic interests and extracurricular activities with greater intensity, as well as to pursue explorations in the theoretical and technical aspects of art making within a studio practice.

Major in Art (BA), Studio Concentration

The Studio concentration gives students a liberal education with a focus on one or more of the visual arts. The concentration enables graduates to incorporate their specialty into their careers and life activities. People who are knowledgeable about art may contribute much by supporting community arts activities and teaching others.
Requirements

Effective Fall 2016

A minimum grade of C (2.000) must be achieved in each upper-division art course in the student’s concentration. The minimum scholastic average acceptable for graduation is 2.000 computed only for courses attempted at CSU.

Graduate
Graduate Programs in Communication Studies

The graduate program leads to a Master of Arts in Communication Studies. Graduate coursework, as well as a required thesis for the Plan A master’s, enables students to develop expertise in one or a combination of three areas of emphasis:

1. media and visual culture;
2. relational and organizational communication; and/or
3. rhetoric and civic engagement.

In each of these areas, students select course work from among the following topics:
1. contemporary issues in media, media theories, media audiences, media texts, and media industries;
2. communication theories, communication and diversity, interpersonal theories, and discourse and organization; or
3. public address, rhetoric and public affairs, rhetorical theory, rhetorical criticism, rhetoric of everyday life, and feminist theory.

The Plan B master’s provides a Deliberative Practices Specialization with coursework in deliberative theory and practice, a practicum, and an Independent Study serving as the culminating report in lieu of a thesis.

Students interested in graduate work should refer to the Graduate and Professional Bulletin and the Department of Communication Studies (http://communicationstudies.colostate.edu).

Communication Studies majors receive a broad-based, liberal arts education, designed to equip them for the challenges of the 21st century, the need to adapt to a rapidly changing workplace, and the likelihood of more than one career. The major encompasses many facets of media and visual culture, relational and organizational communication, and rhetoric and civic engagement. Along with courses in communication studies, the major requires courses in the arts and humanities, the social sciences, and history, and a minor or second major. The department’s goals for undergraduate majors include helping students to achieve an outstanding education in communication studies, to further their knowledge and understanding of human communication, and to provide leadership in communication activities. In so doing, we hope to help students prepare for successful careers, the duties of citizenship, and productive and rewarding lives.

Learning Outcomes
Students will demonstrate:

- **Totality**: Students will be able to demonstrate a comprehensive understanding of the Communication Studies discipline. They will be able to discuss the central topics in the field related to history, theory, and research. Students’ knowledge of the field will also span several contexts of communication scholarship, including media and visual culture, relational and organizational communication, and rhetoric and civic engagement.

- **Synthesis**: In addition to having a comprehensive understanding of the foundational concepts, theories and research domains in the Communication Studies discipline, students will be able to integrate what they have learned in these areas and apply their knowledge to address contemporary issues salient to their personal, professional, and civic lives.

- **Skillfulness**: Central to the Communication Studies discipline is the development of strong oral and written skills. Students will be able to construct and deliver high-quality, evidence-based arguments tailored to specific audiences. Additionally, students will be able to thoughtfully and ethically critique the oral and written work of their peers (as well as communicators in other professional and public settings).

Potential Occupations
The Communication Studies major, like many liberal arts majors, provides students with a broad academic background suitable for a variety of jobs in the public and private sectors. Majors are trained to think independently and critically, communicate effectively, and function in a multicultural world. Employers appreciate Communication Studies majors for their multiple skills and their ability to adapt to a variety of tasks and work environments.

Many majors find employment in public relations/marketing, politics, sales, human relations, government, business management, convention and meeting planning, education, and computer-mediated communication. Some students move on to graduate work in communication studies and to post-graduate study in law and theology.

Career opportunities include, but are not limited to employee relations specialist, employment counselor, human resource consultant, industrial relations representative, public relations specialist, labor relations consultant, training director, vocational rehabilitation counselor, advance agent, business communicator, equal opportunity representative, foreign service officer, cooperative extension service worker, politician, lobbyist, speechwriter, press agent, literary agent, interviewer, sales representative, scriptwriter, lawyer, teacher.

Internships are available to Communication Studies majors and are highly recommended to enhance practical training and development. Graduates who seek advanced studies can attain more responsible positions with the possibility of rising to top professional levels.

Program Total Credits: 39

A minimum of 39 credits are required to complete this program.

1. Students must complete a deliberative practices project in SPCM 695. Project will be based on Center for Public Deliberation program.

**Ph.D. in Communication**

The Ph.D. in Communication trains scholars, teachers, and professionals to engage social, political, and professional challenges using advanced expertise in the field of Communication.

The program is shaped by the three areas of expertise present in our department. These three areas examine communication and engagement from three perspectives:

1. **Interpersonal, Intercultural, and Organizational Communication:** For many individuals, engagement with the public world grows out of their relational lives and is expressed in the organizations to which they belong and in which they work. Professors and students in this area will explore communication in relational or interpersonal systems, organizing and work contexts, and within national and global arenas. Here, the focus is on exploring how individuals respond to and participate as active members in various forms of community, paying special attention to the ways in which communicative actions can create, sustain, and disable engaged citizenship.

2. **Media and Visual Culture:** In the contemporary, globalized world, engaged citizenship often flows through media and is represented and enacted within popular culture. Professors and students in the area explore the mediation of public culture with particular attention to film, television, digital discourse, and the globalization of media institutions. Here, the focus is on the construction of critical media literacies and understandings of how our mediated forms of communication engage or disengage individuals as community members, empowering or disempowering them as political agents.

3. **Rhetoric and Civic Engagement:** In popular conversation, “rhetoric” is often understood to mean empty speech. Communication scholars, however, trace the meaning of “rhetoric” to antiquity when thinkers such as Aristotle and Cicero placed rhetorical studies at the center of democratic engagement. Since then, rhetorical studies have explored public engagement and community building, examining the role of communication in civic life. The resurgence of rhetorical studies in the humanities is founded on a renewed sense of the importance of rhetoric to engaged citizenship in the 21st century. Professors and students in this area explore the role of public communication in creating, maintaining, and undermining civic culture.

Although these three areas of departmental emphasis are distinct, the signal strength of the program is the collaborative overlapping of these three areas. As a community, we have developed a cutting-edge doctoral program that takes advantage the shared commitment to study and engage in transformative communication.

**Requirements**

**Effective Fall 2017**

Students must have earned an M.A. in Communication Studies or a related discipline. A maximum of 27 credits at the master’s degree level may be accepted toward the Ph.D.

Major in Economics

Economics is the study of how people and societies use scarce resources to produce the things they want. Economic theory provides a framework for understanding economic issues, analyzing and predicting the likely effects of economic behavior and government policies, and formulating efficient and equitable solutions to pressing economic problems.

A strong liberal arts curriculum including arts and humanities, social and natural sciences, advanced composition, mathematics, and statistics provides the depth and breadth of knowledge needed to systematically and logically analyze problems, generate and test ideas, and develop effective communication and quantitative skills. Economics majors develop an appreciation of economic issues, and learn to analyze and critically evaluate economic phenomena and policies. The major core includes four semesters of economic theory, a semester of econometrics, a senior capstone seminar, and several semesters of economics electives covering a wide variety of economic topics from environmental and natural resource economics to the history of economic institutions and political economy.

Learning Outcomes

Students will:

- Display command of basic microeconomic concepts such as rationality, cost/benefit, supply and demand theory, decision making at the margin, monopoly and competition, and efficiency and equity.
- Display command of basic macroeconomic concepts such as aggregate demand and supply, fiscal and monetary policy, and the use of these policies in the macro-economy.
- Understand and analyze basic economic issues found in the news and understand how the economic aspects of society work.

Potential Occupations

Economists are employed in a wide variety of fields from education and research to business and government. Nonprofit and international organizations use economists in overseas development, environmental conservation, and international relations. Economics, like many liberal arts majors, provides students with a broad academic background suitable for a variety of jobs. Economics majors are trained to think independently and critically, communicate effectively, and function in a multicultural world. Many employers appreciate liberal arts majors for their multiple skills and their ability to adapt to a variety of tasks and work environments. Careers for graduates are available in education, business, and government. Participation in internships or cooperative education opportunities is highly recommended to enhance practical training and development. Graduates who go on for advanced studies can pursue careers in economics or attain advanced positions with the possibility of rising to top professional levels.

Depending on interests, the electives taken, or the minor selected, available career choices include, but are not limited to: commodities/stock broker, financial analyst, economic forecaster, trust administrator, loan counselor, pension funds administrator, foreign trade analyst, public policy analyst, regional/urban planner, foreign service officer, tax auditor, natural resource analyst, educator, program administrator, researcher, community organizer, environmental activist, international aid organization analyst or administrator, marketing analyst, purchasing agent, public relations/media planner, program consultant, contract administrator, systems evaluator, personnel planner, portfolio administrator, finance manager, secondary school teacher.

Requirements

Effective Fall 2017

Economics majors must achieve a minimum grade of 1.670 (C-) in each of the economics courses counted toward the major.

Major in English

English majors develop an understanding of diverse cultures, literary traditions, and great works of English, American, and world literature. Students expand their ability to analyze a variety of texts and view them through the lenses of diverse critical perspectives. Majors develop the ability to write for both specialized and general audiences. There are five concentrations from which students can choose:

- Creative Writing,
- English Education,
- Language,
- Literature, or
- Writing, Rhetoric and Literacy.

Learning Outcomes

Students will demonstrate:

- Competency in critical reading and interpretive techniques, including:
  - formulating, developing, and supporting interpretive positions with appropriate evidence;
  - using technical and conceptual vocabulary knowledgeably;
  - using appropriate methodologies, critical approaches, and theoretical perspectives; and
  - being original and creative.
- Effective written expression in a variety of genres for a range of audiences on literary and non-literary topics.
- Familiarity with the main writers, texts, genres, and movements in the literary history of the United States and British Isles, and/or the history and development of the English language; and/or literacy issues in their historical contexts.
Potential Occupations

A major in English prepares students for business, government, or education careers that require broadly educated people who can think critically, communicate effectively, analyze texts, and write well. Many employers appreciate liberal arts majors for their multiple skills and their ability to adapt to a variety of tasks and work environments.

The department encourages experiential education by offering a variety of internship opportunities.

Students are also invited to generate their own positions in fields of interests, as well as pursue established local, regional, or national internships. Graduates who go on for advanced studies can attain more responsible positions with the possibility of rising to top professional levels.

Depending on a student’s interests, the electives taken, or the concentration selected, available career choices include, but are not limited to: copy editor; project editor; manuscript reader or story analyst; sales representative; publicity and promotion specialist; advertising coordinator; production specialist; assistant book publicist; contracts and permission specialist; agency or arts administrator; human resource manager; human services program developer; public relations; English teacher; teacher of English as a second language; curriculum developer; education administrator; grant writer; technical writer for business, industry, or science; magazine, newspaper, television, education, or government writer; biographer or writer of prose, fiction, or nonfiction; lyricist.

Major in English, Creative Writing Concentration

The Creative Writing concentration gives students the opportunity to strengthen their creative writing and reading skills and their imaginations. Students take beginning, intermediate, and advanced courses in one or more of the following genres: fiction, poetry, and nonfiction. Intermediate and advanced courses are primarily workshop classes in which students read and critique one another’s work. At the center of all creative writing courses is the study of craft. Students in the creative writing concentration also take a wide variety of literature classes, which prepare them to be writers by schooling them in literary traditions and styles. An internship program for all English majors offers creative writing students writing and research positions that may lead to employment. In addition, the creative writing program runs a vibrant reading series that gives students the chance to meet visiting writers.

Requirements

Effective Fall 2015

Major in English, English Education Concentration

The English Education concentration provides students with preparation for teaching in secondary schools. It is designed for students who wish to pursue a career in teaching language arts and offers a range of courses in language, literature, and writing. Students may receive an endorsement from the State of Colorado in English Language Arts. In addition to the common requirements for the English major, students pursuing teaching licensure take several extra courses in English, as well as education classes through the School of Education.

Students interested in pursuing a teaching license through CSU may refer to the Center for Educator Preparation (CEP) (http://cep.chhs.colostate.edu).

Requirements

Effective Fall 2015

For graduation, an English major must attain a minimum grade point average of 2.000 in upper-division composition and English courses.

Major in English, Literature Concentration

The English Department offers a curriculum featuring critical study of literature, ancient through contemporary, in poetry, prose, and drama. Students will become familiar with major figures and forces, but also with non-traditional writers outside the established canon. Courses in literary theory will give students a sense of the wide variety of approaches that can be applied to the interpretation of texts. In all courses, students practice a number of different types of analytical and critical writing.
Requirements  
Effective Fall 2015

For graduation, an English major must attain a minimum grade point average of 2.000 in upper-division composition and English courses.

Minor in English

When visiting the English Department office to officially declare an English or English-related minor (http://english.colostate.edu/undergraduate/english-related-minors), students will be provided with a course guide for that minor. To speak with an advisor regarding your minor, contact Prof. Tobi Jacobi, by phone at (970) 491-3344, by email at tjacobi@colostate.edu, or in person during office hours or by appointment in Eddy Hall, Room 349.

For information about English and Composition course offerings and registration procedures for the upcoming semester or summer session, please view the Rambler (http://english.colostate.edu/undergraduate/publications), the Department’s advising newsletter.

English Minor

The English minor is designed for students with interests in English studies who do not want to complete an English major. With very few exceptions, the minor allows students to choose any English or composition courses to create a program of study specific to their needs and interests. Minimum of 21 credits in courses with E prefix, at least 12 of which must be upper division.

The English Department also offers the Linguistics and Culture Interdisciplinary Minor.

Requirements

Effective Spring 1996

Students must satisfactorily complete the total credits required for the minor. Minors and interdisciplinary minors require 12 or more upper-division (300- to 400-level) credits.

Additional coursework may be required due to prerequisites.

CO 150, E 487A, and E 487B may not count toward the minor. CO 300, CO 301A, CO 301B, CO 301C, CO 301D, CO 302, and CO 401 may count toward the minor. A minimum of 6 credits must be taken at CSU.

Graduate Certificate in TESOL Education

The Graduate Certificate in TESOL Education provides graduates with practical, theoretical, and critical knowledge of the English language and of methods for teaching it in various social and academic settings. The courses required for the certificate promote reflective inquiry, provide students with the necessary tools for ongoing professional growth, serve as models of effective pedagogy, and introduce students to the various ways in which instruction can be enhanced by contemporary technologies.

Effective Spring 2018

Additional coursework may be required due to prerequisites.

Master of Arts in English, Creative Nonfiction Specialization

The Creative Nonfiction Specialization offers graduate students an opportunity to develop as writers and readers of creative, or literary, nonfiction. The program is innovative in that students can focus as much on reading and theorizing creative nonfiction as they can on writing it. Investigating the art and craft of creative nonfiction as practitioners and theorists, students encounter and engage genres as different as the personal essay, literary journalism, science writing, memoirs, and lyric essays. Recently the genre of creative nonfiction has expanded in
exciting ways, and students are given the opportunity to study hybrid forms as well. Theses within the program range from a critical analysis of a work of creative nonfiction to a student’s own creative nonfiction essays or a single long work.

**Requirements**

**Effective Fall 2012**

- Completion of the program of study listed below
- Oral defense of your thesis.

### Master of Arts in English, Plan B, TESL/TEFL Specialization

The TESL/TEFL Specialization provides graduates with practical, theoretical, and critical knowledge of methods for teaching the English language in various social and academic settings. The program features an integrated core in which a comprehensive understanding of the form and communicative functions of the English language is combined with both general and skill-specific (reading, writing, listening, speaking) pedagogical theories and applications. These courses are designed to promote reflective inquiry, to provide students with the necessary tools for ongoing professional growth, to serve as models of effective pedagogy, and to introduce students to the various ways in which instruction can be enhanced by contemporary technologies. The connection of theory and practice is enhanced through a variety of supervised teaching experiences, and the completion of a portfolio, project, or thesis.

Graduate Program in Ethnic Studies

The Department of Ethnic Studies seeks to teach students to understand the unique and interlocking experiences of racially marginalized groups and to analyze how race intersects with other forces of social differentiation, such as gender, sexuality, and class, in national and international contexts. The program recognizes the importance not only of the history of racial exclusion and marginalization but also the creative ways in which various racial groups sustain their humanity through cultural preservation, transference, and renewal. Ethnic Studies is committed to nurturing students to become culturally aware, astute, civic-minded individuals who strive to strengthen the communities in which they reside. Because the study of ethnic groups intrinsically reveals how race structures life chances and opportunities, the scholarly orientation of the department reflects a commitment to meaningful changes in public policy and social life. The department offers graduate-level education to prepare students as leaders in the field of ethnic studies.

Students interested in earning a Master of Arts degree in Ethnic Studies should refer to the Graduate and Professional Bulletin and the Department of Ethnic Studies (http://ethnicstudies.colostate.edu).

Major in Ethnic Studies

Ethnic Studies critically examines the interlocking forces of race, gender, class, sexuality, and other forms of social differentiation that shape the histories and experiences of racially marginalized groups. The programs of study interrogate how these socially constructed ideas impact distribution of social goods, affect life chances, shape identities and worldviews, and reproduce social inequalities. Drawing from interdisciplinary and comparative theoretical frameworks, we bring to bear issues of power, privilege, and social justice pertinent to the experiences of diverse populations in the U.S. and abroad. We are especially committed to nurturing civic-minded and culturally informed students who strive to strengthen the communities in which they reside. In support of the land-grant mission of CSU, Ethnic Studies engages with communities on and off campus in order to effect meaningful change in public policy and social life.

Learning Outcomes

Upon completion of the programs of study, students will demonstrate:

• An understanding of the key concepts shaping the experiences of various racial and ethnic groups in the United States and abroad.
• Familiarity with social histories and experiences of racial and ethnic groups.
• Effective oral communication, writing, and research skills.
• An increase in critical thinking, intellectual, and personal growth.
• An understanding of the value of social consciousness and personal responsibility.

Potential Occupations

Both theoretical understandings of and practical experience in cross-cultural and inter-ethnic relations are invaluable in today's world. Ethnic Studies graduates work in the following fields and occupations. Education: K-12 and adult education (e.g. refugee/immigrant education, diversity training in the private sector); human social services including counseling, health care, and civil service; federal, state, tribal, and local government, and community service; natural resources development and technology transfer; practices, economics, and law in ethnic contexts; communications media such as newspaper, radio, video, and television; archival and museum studies; non-profit agencies; and advanced studies including graduate programs in the social sciences and professional programs (e.g. law, social work).

Concentrations

• Women's Studies Concentration (No new students are being accepted into this concentration)

Requirements

Effective Fall 2017
