The M.A. in Ethnic Studies explores issues of race and ethnicity as increasing in significance due to deep structural shifts and cultural practices locally, nationally and internationally. Difficult challenges emanate from deeply rooted racial conflicts as well as people, cultures and capital crossing national borders. The consequence from inattention to this reality are enormous. Comprehending the dynamics from social formations from a multitude of disciplines is critical in identifying the problem areas in which intervention and/or additional research may be necessary. The overarching purpose of this program is to engage a comprehensive understanding of the enduring and transformative nature of race and ethnicity in the United States and around the globe, to develop professional competencies in working with diverse communities, and to bring about meaningful social changes.

Major in History

History is an account of our human past and seeks to interpret the course of human affairs through evidence and reason. Historians use written records, images, artifacts, and other materials to understand the past and also the relationship between the past and the present. Historians ask not only what happened and why, but also how the present came to be. History provides insights into how individuals and groups made decisions, exercised power, and responded to change. History helps us to understand how processes—such as revolution, migration, war, ecological disturbance, and globalization—shaped societies over time. It helps us to understand how people grappled with class, ethnicity, gender, and race, and how they conceptualized the world through religion and ideology. History provides a form of knowledge that people in all times and places have used to answer basic questions about the human predicament.

The History major is designed for students to enlarge their knowledge about the past, improve their ability to think logically and critically, and sharpen their powers of written and oral expression. It is an outstanding choice for students planning further professional study in law, medicine, ministry, academia, business, and many other fields.

Learning Outcomes

Students will demonstrate:

- Ability to analyze and interpret historical materials, such as documents, artifacts, and images
- Ability to engage in chronological reasoning, to understand causation and change over time
- Ability to examine critically how people in the past understood their own history, in scholarly works and in popular forms such as myths or commemorations
- Ability to interpret, write, and speak about the past using evidence and according to the standards and expectations of the historical discipline

Potential Occupations

Government official in foreign service, national security, military, cultural resources management, and other areas.
History teacher in public and private schools; any professional occupation in business or public service requiring a liberal arts education and skills in research, writing, and the analysis of information. With additional graduate training: lawyer, physician, social worker, minister, librarian, museum curator, archivist, professor, educational administrator, or other professional.

Concentrations

- General History Concentration
- Language Concentration
- Social and Behavioral Sciences Concentration
- Social Studies Teaching Concentration

Major in Journalism and Media Communication

The study of journalism, mass communication, and specialized media combines high-level professional training with a broad foundation in the liberal arts. All students complete a common 21-credit core, including writing, multimedia, and conceptual courses, as well as a capstone course and an internship. Students work closely with a faculty advisor to select an additional 19 credits in a focus area crafted to match their career interests. Practical experience can be gained on the staffs of the daily Rocky Mountain Collegian, the award-winning campus television station CTV, College Avenue magazine, and KCSU-FM Radio. Graduating seniors present professional portfolios for assessment by panels of faculty and communication professionals from Denver and elsewhere in Colorado. Because successful communicators require broad knowledge, this flexible program encourages development of a background in the humanities, social sciences, natural sciences, and in-depth study in an area of interest outside journalism. The addition of a minor or double major in disciplines such as political science, information technology, history, economics, business, communication studies, psychology, the arts, or natural or applied sciences is possible.

The Department of Journalism and Media Communication is one of a relatively small number of departments formally recognized by the Accrediting Council on Education in Journalism and Mass Communications. Participation in volunteer activities, cooperative education opportunities, or communication-related part time jobs is highly recommended to enhance practical training and development.

Learning Outcomes

Students will demonstrate:

- Competence in writing, editing, and producing media messages as well as in planning, designing, and evaluating effective public information programs
- Knowledge and use of communication theory and research principles to guide the selection of communication audiences, message content and format, and media channels to enhance communication impact
- Understanding of the ethics, laws, and values associated with professional communication activity

Potential Occupations

The Journalism and Media Communication program emphasizes the role of mass and specialized media in society and prepares
students for entry-level work in private business, government, and education. Depending upon the focus of study, students may find career opportunities in a wide variety of professional communication venues. Specific career opportunities may include: advertising copywriter, designer, or producer; agriculture writer, reporter, or editor; attorney specializing in communication law; blogger, columnist, or editorial cartoonist; college professor; communications manager or director; company spokesperson; corporate media specialist; e-mail and direct mail strategist; environmental media specialist; freelance writer, editor, or photographer; health writer, editor, or producer; marketing coordinator; media relations director or strategist; multimedia producer; non-profit communications director; novelist or non-fiction author; reporter or photojournalist for the web, magazines, newspapers, or television; owner of public relations agency or production company; professional speaker; public affairs officer for government agency; public relations agency account executive; publication designer for magazines or newspapers; radio disc jockey, reporter, or music director; reality television producer, writer, photographer, or on-camera talent; science writer or editor; social media specialist; sports writer, photographer, or producer; technical writer or editor; teacher for any level of K-12 education upon completion of appropriate licensing (see the Center for Educator Preparation (http://cep.chhs.colostate.edu)); television news anchor or program host; television or radio news program producer or director; television documentary producer; travel writer, photographer, or program host; video editor for news, corporate, or entertainment television; website designer and manager.

Technical and Science Communication Minor

The minor in Technical and Science Communication is designed to educate highly qualified communicators who have interests in specialized academic disciplines and career fields. Because science and technology often involve complicated research and processes, communicating the results of that work requires special skills. This program is designed to prepare students for a wide range of niche career opportunities in media, corporate communication, technology related industries, and scientific environments.

Students in this minor will learn to write and manage communication efforts, with a focus on turning complex ideas and processes into simple, clear messages applicable for publication and electronic delivery via broadcast, cable, or the Web. The accuracy and effectiveness of this communication is especially important as the Internet and the ubiquity of mobile devices make the delivery and consumption of information widely available. Having the skills to interpret and communicate complicated processes provides significant career advantages in one of the highest-paying areas of professional communication.

Requirements

Effective Fall 2013

Students must satisfactorily complete the total credits required for the minor. Minors and interdisciplinary minors require 12 or more upper-division (300- to 400-level) credits.

Additional coursework may be required due to prerequisites.

**Major in Dance**

Office in University Center for the Arts, Room 120

Professor Jane Slusarski-Harris, Director

CSU offers a rigorous program in classical and contemporary dance education culminating in a B.A. in Dance. The degree requires a total of 120 credits with the following focus: technical training and foundations, performance, composition, pedagogy, professional preparation, theatrical production and design, and academics. In the Dance major, students explore the many possibilities for movement expression, along with creativity and scholarly examination, in a challenging and supportive environment. Dance major and scholarship auditions for prospective students (high school seniors or transfers) are held during Fall and Spring Visit Days. The audition assesses training background, technical level, and the potential to successfully complete the degree program at an advanced and/or pre professional level. To be placed into the Dance major, students should have professional quality dance training in both ballet and modern technique, be at the intermediate technical level, and have the ability to withstand rigorous daily work throughout the year. Other forms of previous dance training are applicable and highly encouraged. For non-majors, enrollment in dance major technique classes depends on space availability, technical level, and suitability, and takes place during the classes of the first week of the semester. All technique classes are accompanied by accomplished musicians in piano, percussion, and a variety of other instruments. Performance,
choreographic, and production opportunities take place each semester and students are encouraged to collaborate with other majors in music, theatre, and the visual arts. Visiting guest artists teach master classes and workshops and choreograph for the students on a regular basis. Supervised student teaching experiences are offered with different age groups and in a variety of situations.

Upon graduation, students will have a theoretical and practical foundation in dance. Graduates will achieve an intermediate/advanced level of proficiency in modern and ballet technique and be able to apply this knowledge to the areas of professional performance, choreography, and teaching. They will have a foundation in technical production and design which supports dance and theatrical productions. They will have a working knowledge of anatomy, kinesiology, and various movement theories relating to dance techniques. They will have a solid knowledge and appreciation of the history and philosophy of dance from many cultures and time periods.

**Potential Occupations**

Dance careers are rigorous and demanding, requiring years of training and discipline. Dance professionals must be versatile with a broad base of experiences in dance or related fields. Dance majors often select a second major such as music, theatre, business, occupational therapy, technical journalism, or exercise and sport science to enhance their job prospects. Experience acquired through extracurricular performances or internships is highly recommended to enhance practical training, development, and career opportunities. Students are encouraged to go on for advanced study at the graduate level in dance in order to secure teaching positions in higher education.

Some examples of the career opportunities in dance include, but are not limited to: professional dancer, professional choreographer, artistic director, university/college faculty, studio owner and faculty, conservatory or school faculty, dance critic, dance therapist, dance somatics specialist, arts manager, lighting designer, costume designer, sound designer, theatre technician, production crew, producer, fashion coordinator, special events coordinator, makeup artist, musical theatre director.

### Major in Music (B.M.)

**Our primary goal is to prepare students to become highly skilled music educators, music therapists, performers, composers, and conductors.** Program goals encourage and develop high standards of teaching, scholarship, performance, and research in music. We are pleased to offer small academic classes, applied study with highly qualified faculty, and careful attention to advising. Courses in music appreciation, music theory fundamentals, and ensembles are open to all students regardless of major.

A successful audition is required prior to entrance into any B.M. Music degree program.

### Learning Outcomes

Students will demonstrate:

- Ability to perform music from a variety of historical/style periods, and exhibit the appropriate skills for musical self-expression in juried performances. These skills include: techniques, musicianship, tone, diction/articulation, style, interpretation, and artistry.
- Understanding of the common elements and organizational patterns of music, including musical forms, processes, and structures.
- Knowledge of music history and representative composers and works from each on a defined evaluation instrument.

Students are also expected to learn music literature from all periods through aural and score analysis. Performance skills are tested at the end of the sophomore year and in a graduation recital if required by the degree option. Some programs require satisfactory completion of supervised student teaching, an internship, or a senior project. In addition, all students must pass a piano proficiency examination.

### Potential Occupations

The undergraduate music curricula at CSU can lead to personally fulfilling careers as music educators, music therapists, performers, composers, and conductors. Music graduates from CSU have successfully gained employment in public and private schools, hospitals and institutions, and as professional performers, conductors, and composers.

Major in Music (B.M.), Music Education Concentration

The Music Education program at CSU is one of the leading teacher preparation programs in the nation. Faculty members are in demand as clinicians, guest lecturers, conductors, and researchers. Music Education majors pursue an accredited curriculum that develops musical knowledge and skills, and prepares students to become accomplished music educators. Students must select one of two options: Instrumental or Choral.

Students interested in pursuing a teaching license through CSU may refer to the Center for Educator Preparation (CEP) (http://cep.chhs.colostate.edu) and the College of Health and Human Sciences section in this catalog or in the Education Building, Room 111.

Major in Music (B.A.)

This major allows students to study music within a larger context of a liberal education. In comparison to majors leading to the bachelor of music (B.M.), less emphasis is placed on studies specific to music. In lieu of fewer credits in music, the student completes a 21-credit option in an area outside of music. In addition, completion of a major paper, lecture/recital, or full recital is required during the senior year.

A successful audition is required prior to entrance into this B.A. Music degree program.

Requirements

A minimum grade of C is required in all music courses used to satisfy the requirements of the major programs (B.A. and B.M.) in music.

Major in Theatre

Office in University Center for the Arts, Room 120
(970) 491-5529
theatre.colostate.edu (http://theatre.colostate.edu)

Professor Price Johnston, Director

As a branch of the arts and humanities, theatre claims a rich history and literature and an equally rich repertoire of embodied knowledge and theory and a varied and complex cultural practice for over 3,000 years. The Theatre Major at CSU emphasizes a reciprocal relationship between practice and scholarly study, combining practical training with theory and history, while stressing creative critical thinking. Students are encouraged to engage intellectual and physical approaches to explore diverse cultural forms, historical traditions, and contemporary theatre practice. They will apply foundational knowledge of cognate disciplines
such as history, philosophy, anthropology, political science, film, art, music, and literature through the lens of serious and disciplined study of acting, theatre design and production, dramaturgy, dramatic criticism, storytelling, and playwriting in theory and practice. During their first two years as Theatre majors, all students will take the same core of courses in all sub-disciplines. Following their sophomore review, students will be directed into one of three concentrations offered to Theatre majors at CSU: General Theatre, Performance, and Design and Technology.

Concentrations

• Design and Technology Concentration
• Directing Concentration (No new students are being accepted into this concentration.)
• General Theatre Concentration
• Performance Concentration
• Playwriting and Dramatic Literature Concentration (No new students are being accepted into this concentration.)

Major in Theatre, Design and Technology Concentration

Students whose goal is to earn a Bachelor of Arts degree in Theatre at CSU with a concentration in Design and Technology will be exposed to multiple disciplines and design areas within the performing arts. These disciplines include scenic design and stage management, and courses chosen from: theatrical construction, lighting design and electrics, digital media design, costume design and construction. This program is geared towards creative and imaginative, open-minded individuals with a drive for excellence in the work that they do.

Students in this concentration explore creative concepts on a theoretical level in the classroom and studio while reinforcing their training through practical application in main stage productions of music, theatre, and dance. Students will take on roles as technicians and assistants in production in addition to their course work, and step into leadership roles as designers or production stage managers as they travel through the program. This fully collaborative and interdisciplinary program supports pre-professional development.

Students who complete the Theatrical Design and Technology concentration will be well prepared to enter the competitive professional field for which they have trained as well-rounded, renaissance artists and technicians. They will learn practical industry skills as well as conceptual techniques and begin to develop an artist’s aesthetic and worldview. Through real-time production experiences, they will learn to think on their feet and adapt to the rapid-paced, high-energy career in the performing arts. Along with their diplomas, students will graduate with the confidence, skills, portfolios, and industry connections they need to pursue professional careers or seek appointments with graduate level programs.

Major in Theatre, Directing Concentration

No new students are being accepted into the Major in Theatre, Directing Concentration. Students interested in this program of study should contact the School of Music, Theatre, and Dance (http://theatre.colostate.edu/about/contact-us-2).

Major in Theatre, Performance Concentration

Students whose goal is to earn a Bachelor of Arts degree in Theatre at CSU with a concentration in Performance will be students who have the ability, aptitude, and stamina to pursue a program of study intended to provide rigorous professional training for a career as a performing artist within the context of a liberal arts curriculum, either as a professional actor or as a creative collaborator with the strong interpersonal communication and group problem-solving skills essential to success in the public sector. This course of study will provide student actors with core physical and vocal technique and a variety of approaches to the acting process from which they may glean their own approach to building a character.

This program of study emphasizes both the theoretical and the practical aspects of theatre as an art form and as a commercial industry, and trains well-rounded, responsible theatre artists who value ensemble and collaboration within an artistic community.

Students who complete the Performance concentration will be well prepared to enter the competitive professional field for which they have trained as well-rounded, renaissance artists and technicians. They will learn practical industry skills as well as conceptual techniques and begin to develop an artist’s aesthetic and worldview. Through real-time production experiences, they will learn to think on their feet and adapt to the rapid-paced, high-energy career in the performing arts. Along with their diplomas, students will graduate with the confidence, skills, portfolios, and industry connections they need to pursue professional careers or seek appointments with graduate level programs.

Major in Philosophy

Philosophy is the oldest form of systematic, scholarly inquiry. It is the study of the most basic moral, legal, aesthetic, religious, and metaphysical ideas by which we quest for understanding and develop principles of conduct. Philosophers seek to establish standards of evidence, provide rational methods of conflict resolution, establish criteria for just social orders, and create techniques for evaluating ideas and arguments.

The study of philosophy broadens and intensifies liberal education while enhancing interpretive abilities in many fields. The curriculum encourages a broad liberal arts background, including courses in foreign languages, and a plan for graduate school and teaching careers in philosophy. The broad relevance of philosophy to other fields permits most students to work toward goals such as professional training in law, medicine, business, or theology. There are three concentrations available to Philosophy majors: General Philosophy; Global Philosophies and Religions; and Philosophy, Science and Technology. It is not unusual for philosophy majors to second-major in other disciplines, and these concentrations combine easily with other majors of the University.

Learning Outcomes

Philosophy students will:

- Recognize and analyze arguments; reconstruct arguments from major texts in both the history of philosophy and in significant contemporary philosophical work; evaluate these arguments for the validity of argument structures and the truth of premises (soundness); and construct valid and sound arguments of their own in a fashion that is as clear and concise as possible.
- Demonstrate in their senior year knowledge of the works of major figures in the history of philosophy as well as significant current issues from the major sub-disciplines of philosophy, including particularly ethics, metaphysics, and epistemology.
- Demonstrate in their senior year skills in written and oral presentation, engaging in fruitful oral discussion, debate, and formal presentations that are logically coherent, clearly and concisely stated, and accessible to their peers in philosophy.

Potential Occupations

A major in Philosophy prepares students for a wide variety of professional aspirations, including graduate study in philosophy or other disciplines; training in law, computer technology, social work, health care, the ministry, business; and general intellectual flexibility in a changing world. The high level of skill that Philosophy majors acquire in
communication, writing, and analytical and critical thinking enables them to secure jobs in a variety of private and public sector professions and to become leaders in their fields.

Depending on the major concentration that a student pursues, available career opportunities include, but are not limited to, public policy analyst, business manager, public administrator, computer programmer, intelligence officer, legislator, teacher, foreign diplomat, social worker, community developer, philanthropic organizer, physician, lawyer, researcher, writer, theologian, human resources manager, publisher, and ethics consultant, in a variety of fields, e.g., in medicine, business, law, public administration, non-profit administration, engineering, and the sciences.

Minor in Philosophy

Philosophy is the study of the most basic moral, legal, aesthetic, religious, and metaphysical ideas by which we pursue understanding and development of principles of conduct. Philosophers seek to establish standards of evidence, provide rational methods of conflict resolution, establish criteria for just social orders, and create techniques for evaluating ideas and arguments. A minor in Philosophy is intended to broaden students' education and to complement and encourage critical and constructive reflection in other courses.

Effective Spring 2017

Students must satisfactorily complete the total credits required for the minor. Minors and interdisciplinary minors require 12 or more upper-division (300- to 400-level) credits.

Additional coursework may be required due to prerequisites.

Students are required to receive at least a C (2.000) in each Philosophy course required for the Minor in Philosophy.

Major in Political Science

Political science is the study of politics and political action in society. It encompasses international agreements and organizations as well as the patterns of political action which both create and shape them. It encompasses citizen action and the institutions which produce public policy at the local, state, and national levels within the United States. It encompasses systems of voting, political parties, courts, compared across national political systems. It encompasses the raising of normative questions about the nature and purposes of political life. The presence of politics is felt in all areas and sectors of society at all times. The dynamic and transformative effects of political action are seen virtually everywhere.

The department’s curriculum is distributed across five subfields of the discipline: American politics, political theory, comparative politics, international relations, and public policy. Political Science major course work across the subfields of the discipline is complemented by the requirement that each Political Science major completes a designated support option, which includes: a minor in another department, an interdisciplinary minor, the second language support option, the methods support option, or a second major.

Learning Outcomes

Students majoring in Political Science shall demonstrate the following:

- Ability to reason through political claims and assertions by political actors
- Skill in recognizing and responding to diverse ideological perspectives
- Ability to locate political issues and controversies within their relevant institutional and historical contexts
- Familiarity with the institutional processes of politics in numerous global and domestic political arenas
- Confidence in expressing opinions and presenting analyses of political problems and their solutions

Potential Occupations

The Political Science major, like all studies in the liberal arts, provides students with a broad academic background that is serviceable across a broad spectrum of employment in the public and private sectors. Political Science majors are trained to be independent and critical thinkers; to be discerning and active observers and listeners; to communicate persuasively; to constructively engage and solve intellectual and practical problems; to adapt and function effectively in a number of distinct occupational and institutional settings; to function comfortably in a multiethnic, multiracial, and globalizing society. The employment profiles of departmental alumni attest to the breadth of possibilities for today’s graduates: public and non-profit organization managers, prosecutors, public policy analysts and consultants, federal law enforcement agents, legislators and legislative analysts, foreign service officers, private attorneys, demographers, criminal investigators, advertising specialists, urban/regional planners, environmental policy analysts, state
budget analysts, public relations representatives, market researchers, elementary and high school teachers, international businessmen and businesswomen, lobbyists, novelists, construction industry managers, insurance agents and managers, financiers, and real estate brokers. Some graduates join professions following advanced study in law, international relations, area studies, public administration, public policy analysis, and business management.

**Concentrations**

Students may complete the general Political Science major or select one of the following concentrations for a more specialized course of study.

- Environmental Politics and Policy Concentration
- Global Politics and Policy Concentration
- U.S. Government, Law, and Policy Concentration

Major in Political Science, Environmental Politics and Policy Concentration

The Department’s Environmental Politics and Policy concentration is designed to help students develop the knowledge and skills to analyze the connections between politics and the natural world and pursue careers in environmental politics and policy-making. Graduates may work as policy analysts, advocates, planners, educators or decision-makers in government agencies, non-profit organizations, businesses and consulting firms at the local, state, national and international levels. Students will learn about how political forces contribute to environmental degradation, the process for developing environmental policies, strategies to assess the strengths and weaknesses of different policy approaches, and how political forces can be harnessed to develop effective responses to problems such as climate change, water and air pollution, food security, and energy provision. Students will explore these issues from both domestic and global perspectives. Environmental Politics and Policy students are strongly encouraged to complete an internship to gain practical experience working in the field.

Requirements
Effective Fall 2016

Political science majors must achieve a minimum grade of C- (1.670) in each of the political science (POLS) courses counted toward meeting the requirement of the major.

Major in Political Science, Global Politics and Policy Concentration

The Department’s Global Politics and Policy concentration is designed to help students develop the knowledge and skills to analyze political relationships between and within countries and to pursue careers in international affairs (http://www.apsia.org/career-guide) (such as working for government agencies, intergovernmental organizations, international businesses, consulting firms or non-profit organizations in the U.S. and abroad). Students will learn about different systems of government, state-society relations in various parts of the world, the ways that public and private actors interact through international institutions and the global economy, as well as the causes of and responses to domestic and international conflict. Global Politics and Policy students are strongly encouraged to study a foreign language (http://languages.colostate.edu) and to complete some of their coursework in one of CSU’s many study abroad programs (http://educationabroad.colostate.edu/students).

Requirements

Effective Fall 2016

Political science majors must achieve a minimum grade of C- (1.670) in each of the political science (POLS) courses counted toward meeting the requirement of the major.

Major in Political Science, U.S. Government, Law and Policy Concentration

The Department’s U.S. Government, Law, and Policy concentration is designed to prepare students to become future leaders in the public sector. The skills gained in this concentration help prepare students for a variety of careers (for example, government agencies, nonprofits, community organizations, lobbying firms, elected office, political communication, research and policy analysts) as well as prepare students for law and graduate schools. Resources for careers include the American Political Science Association (http://www.apsanet.org/careersinpoliticalscience) and the Network of Schools of Public Policy, Affairs, and Administration (http://www.naspaa.org/students/careers/joblinks.asp). The courses in this concentration educate students about the political processes and the legal environment of all levels of American government as well as the processes of policymaking and the administrative apparatus used to implement public policy. Students will also be exposed to a variety of substantive policy issues including urban policy, energy policy, and environmental policy in the United States. U.S. Government, Law, and Public Policy students are strongly encouraged to complete an internship in one of the many organizations in the broader community. Past students have completed internships with a variety of law firms (http://polisci.colostate.edu/undergraduate/pre-law), the Cities of Fort Collins, Windsor, Loveland, and Westminster, the Colorado General Assembly, and Woodward Governor among others. Students in this concentration are also encouraged to participate in the Legislative Internship Program (http://polisci.colostate.edu/undergraduate/legislative-internship) during their junior or senior years.

Requirements
Effective Fall 2016

Political science majors must achieve a minimum grade of C- (1.670) in each of the political science (POLS) courses counted toward meeting the requirement of the major.

**Major in Sociology**

Sociology is the study of social life, focusing on the mutual interaction between human groups and institutions. Human beings, through patterned social interactions, construct and reconstruct the social webs within which they live. The nature and type of social relationships are central to their lives. Sociologists study relationships within family units from the most primitive cultures to interactions of large, bureaucratic institutions in major industrialized nations. Social issues are studied in
a variety of ways: direct observation of groups; surveying or interviewing individuals; analyzing historical research; and a variety of other methods.

Sociology majors have many opportunities to pursue broad and diverse ranges of interest. Students gain a sense of social perspective, an understanding of human affairs, an ability to think critically, and a capacity to write well. The curriculum includes general courses in the arts and humanities and the social sciences along with sociology course work. A generous selection of electives allows students to major or minor in a complementary discipline. A Sociology major also may enroll in one of the interdisciplinary minors, such as, Latin American and Caribbean Studies, Religious Studies, or Women’s Studies.

**Learning Outcomes**

Students will:

- Analyze critically the major classical and contemporary theories from the 19th and 20th centuries. Students are expected to demonstrate how well these theories help us understand or explain current social phenomena both in the U.S. and abroad. Students will learn to apply a wide variety of theories, including European critical theory, functionalism, symbolic interactionism, and post-modern theory, in required empirical research.

- Analyze critically sociological phenomena by applying objective social research methodologies. Students will demonstrate a working knowledge of sociological theories and the application of these theories to real world social phenomena. Specifically, students will understand conceptual frameworks associated with
  a. social structure (social stratification, ethnic structures, social institutions, small group dynamics, social demography, and social organizations);
  b. culture (socialization and the development of personalities, social norms, framing normative assumptions of societies and organizations); and
  c. social agency (the behavior of the individual, collective behavior such as with social movements, and the principles of social-psychology).

- Analyze critically sociological phenomena by applying social statistical techniques. Students will demonstrate a strong working knowledge of statistical techniques including
  a. parametric statistics,
  b. non-parametric statistics,
  c. ordinary least squares statistical analysis, and
  d. the application of the SPSS statistical package.

**Potential Occupations**

Careers are exceptionally varied. Participating in internships and cooperative education opportunities is highly recommended to enhance practical training and development. Sociology graduates apply their education to a large variety of occupations in the non-profit, private, and public sectors. Because Sociology graduates possess a number of transferable communication, analytical, and people skills, they find positions in government, industry, and academia. Many employers appreciate liberal arts majors for their multiple skills and their ability to adapt to a variety of tasks and work environments. Graduates who go on for advanced studies can pursue careers in sociology or attain advanced positions with the possibility of rising to top professional levels.

Depending on student interests, the electives taken, or the concentration selected, available career choices include, but are not limited to: business manager, personnel director, city manager, clinical social worker, college/university instructor, human relations director, demographer, government aide, labor relations specialist, market analyst, researcher, medical administrator, police officer, politician, probation/parole officer, program director/manager, public administrator, publishers, sociologist-specialist, consultant, criminologist, lawyer, librarian.

**Concentrations**

- Criminology and Criminal Justice Concentration
- Environmental Sociology Concentration
- General Sociology Concentration

**Major in Sociology, Criminology and Criminal Justice Concentration**

The Criminology and Criminal Justice concentration supplements general sociological training with course work focused on the social aspects of crime and criminal justice. Sociology majors who opt for the Criminology and Criminal Justice concentration will supplement their general sociological training with course work focused on social aspects of crime and criminal justice. Such students will find the concentration helpful in enhancing their ability to think critically about issues of crime and justice, and in preparing for various careers within the criminal justice system.

**Requirements**

**Effective Spring 2015**

Sociology majors in the Criminology and Criminal Justice concentration must achieve a minimum grade of C- (1.670) in each Sociology course counted toward the concentration, and in POLS 413 and SOWK 371B or SOWK 371C, if these courses are counted toward the concentration.

### Major in Sociology, Environmental Sociology Concentration

The Environmental Sociology concentration takes sociology’s long established disciplinary orientation to the world and applies it to the study of nature-society relations. Sociology is about people, institutions, and behaviors. It is about social interactions and social structures. The task of the sociologist, therefore, is to stand back from commonsense views of the world and understanding the structure and processes of a society as a whole, including global societies. Environmental sociology is about translating these tasks into analysis and action around environmental issues. Some of the pressing contemporary environmental issues that environmental sociology can be applied to are, for example, transboundary pollution, climate change, biodiversity loss, and water and soil degradation. Students will find the concentration helpful in preparing them for a growing number of jobs that have a focus in environmentally related matters.

Major in Sociology, General Sociology Concentration

The General Sociology concentration is designed to provide students with a broad liberal arts education and a greater understanding and insight into the social systems and processes that bear upon everyday lives. Students will find the concentration helpful in enhancing their ability to grasp the complexities of the world so as to prepare them for a variety of jobs upon graduation. Opportunities for students with bachelor’s degrees in Sociology are quite varied. Some go on to work for human service agencies; others work in the fields of criminal justice and urban planning; others enter graduate programs in sociology, education, law, medicine, or social work.

Minor in Criminology and Criminal Justice

The department offers a minor in Criminology and Criminal Justice for students from other departments who wish some experience in an area outside their majors. Minors require fewer credit hours to complete than majors. Students will focus on the social aspects of crime, deviance, and criminal justice.

Requirements
Effective Spring 2014

Students must satisfactorily complete the total credits required for the minor. Minors and interdisciplinary minors require 12 or more upper-division (300- to 400-level) credits.

Additional coursework may be required due to prerequisites.

Students must receive a grade of C or higher for each course counting toward the minor.

**College-Wide Graduate Programs**

**Graduate Certificate**

Certificate in Sustainable Military Lands Management

The College offers studies and professional training in the management, administration, and scientific investigation of renewable and nonrenewable natural resources. Programs include the study of every component of natural systems with particular emphasis on fish, forests, minerals, range, watershed, wildlife, and outdoor recreation areas.

The Natural Resource Ecology Laboratory, housed in the College, is devoted to research and training in ecosystem science and management.

The College also houses the Center for Environmental Management of Military Lands, CEMML, (http://www.cemml.colostate.edu) which is a team of environmental professionals experienced in the conservation and sustainable management of natural and cultural resources on Department of Defense lands.

**College Programs**

**Undergraduate Majors**

The scope of the College's programs is more broadly based than most natural resources schools. There are ten undergraduate curricula, most with specialized concentrations or designated areas of further study. Undergraduate majors in all five departments lead to the Bachelor of Science degree, which requires a minimum of 120 credits. A minimum of 42 credits in upper division courses is required for all majors.

**Field Training Programs**

Most undergraduate majors require the completion of a four-week summer field training program (five credits) before their junior year. Summer field instruction is given at the CSU Mountain Campus (http://mountaincampus.colostate.edu) campus, 55 miles west of Fort Collins. Permanent quarters and meals are provided.

During interim or summer periods, some majors devote several weeks to advanced field training programs off campus. Students taking advanced ROTC should arrange their schedules with their advisors in their junior year to avoid conflicts during senior spring semester. It is recommended for all majors, and required for some, that students have a minimum of one summer of field experience before graduation.

**International Education**

International resources management is an increasingly important concern of the Warner College of Natural Resources. It is desirable that students in the College have opportunities to study abroad, just as students from abroad are encouraged to study here. CSU has agreements covering study abroad opportunities with institutions throughout the world. Students may complete one or two semesters of resources management education abroad. Students interested in studying abroad should plan far in advance by discussing opportunities with their academic advisor and by visiting the Office of International Programs (http://international.colostate.edu) in Laurel Hall.

**Graduate Programs**

Master of Science and Doctor of Philosophy degree programs are offered in most departments. A program leading to the professional degree, Master of Natural Resources Stewardship, is offered in the Department of Forest and Rangeland Stewardship. The Department of Fish, Wildlife, and Conservation Biology also offers a professional degree, Master of Fish, Wildlife, and Conservation Biology. Descriptions of the various graduate
programs may be found in the Graduate and Professional Bulletin or on the departmental websites.

**Admissions Information**

Contact: Ethan Billingsley, Director of Undergraduate Programs  
(970) 491-4994  
ethan.billingsley@colostate.edu

**For High School Graduates**

High school students are advised to take all the English, science, and mathematics courses possible to prepare for college-level work in natural resources.

**Limitation on Transfer of Credits**

Students planning to attend another college or community college prior to enrolling at CSU should follow the freshman program for their chosen major as closely as possible. To assure that they have the opportunity to complete all degree requirements in four years, they should plan to transfer to CSU no later than the beginning of their junior year. Credits which transfer but are not equivalent to specific curriculum requirements may be used as elective credits.

**Transfer Students**

Students are required to choose a major when enrolling. Transfer students, therefore, should follow the departmental curriculum closely. Check the individual major and concentration for specific courses.

**Graduate Certificate in Sustainable Military Lands Management**

The Graduate Certificate in Sustainable Military Lands Management at CSU is designed to enhance the knowledge and skills of current practitioners and managers, as well as new professionals interested in applying their education and background to the management of military lands. This knowledge and skill sets are transferable to professionals in a wide array of federal and state land management agencies. This online program is the first and only program of its kind in the U.S.

**Effective Fall 2017**

Additional coursework may be required due to prerequisites.

Major in Watershed Science

Watershed Science is the interdisciplinary study of the natural processes and human activities that affect freshwater resources. Water is a critical component of Earth’s ecosystems and is used for human consumption, agriculture, energy production, transportation, and recreation. Sustainable management of freshwater resources is an increasingly important and complex challenge in Colorado and worldwide. The major in Watershed Science focuses on the physical, chemical, social, and biological factors that affect the quantity, quality, and flux of water through learning and engagement in the field, laboratory, and classroom. Students begin their program by building a strong foundation in the physical and natural sciences in preparation for upper-division coursework in land use hydrology, snow hydrology, water quality, and watershed problem analysis. The program emphasizes field-based learning and technical skills, with core classes focusing on watershed measurements, data analysis, modeling, and research.

Learning Outcomes

Students will demonstrate:

• An understanding of the key concepts in watershed science including surface and subsurface hydrology and water quality.
• An understanding of land use effects on fresh water resources.
• Skills in collection and analysis of meteorological, hydrological, and water quality data.
• Skills in watershed problem analysis, including the use of watershed models.
• Strong critical thinking, writing, and oral communication skills.

Potential Occupations

Completion of the undergraduate degree qualifies students for a wide variety of careers in hydrology and water resources management. Examples of possible careers include: watershed scientist, hydrologist, water quality analyst, watershed manager, environmental consultant, watershed use specialist, and water conservation specialist. Employment opportunities for graduates are found in consulting firms, governmental agencies, international development and resource management agencies, non-profit organizations, and private industry. Graduates will be well positioned for advanced science degrees.

Program Total Credits: 120
Minor in Watershed Science

The minor in Watershed Science provides a background in core classes addressing land use hydrology and sustainable watersheds, while providing students with an experiential learning opportunity in the watershed practicum field course. The minor offers a broad and flexible selection of additional coursework options that emphasize physical, biogeochemical, and societal aspects of water resources and watershed management. Students can select the combination of courses that best fits their interests and complements their major.

Requirements

Students must satisfactorily complete the total credits required for the minor. Minors and interdisciplinary minors require 12 or more upper-division (300- to 400-level) credits.

Additional coursework may be required due to prerequisites.

Master of Greenhouse Gas Management and Accounting, Plan C (M.G.M.A)

A new job market is emerging for professionals who can assist corporations, governments, and non-governmental organizations with implementation of more sustainable practices that reduce greenhouse gas emissions. CSU’s Master of Greenhouse Gas Management and Accounting degree program combines the environmental knowledge with the analytical and technical skills needed to launch a successful career tackling climate change issues. Students in the program gain practical knowledge through coursework and field-based training, as well as real-world experience through professional internships. This interdisciplinary degree is appropriate for students from a wide variety of backgrounds – such as environmental studies, forestry, business, engineering, and agriculture – to gain the experience needed for rewarding careers.

Training in accurate quantification of greenhouse gas mitigation efforts is central to deployment of cleaner technologies and practices across all sectors of the economy. Every nation in the world has recognized the importance of limiting greenhouse gas emissions and agreed that emissions must be reduced. This goal cannot be achieved without a new class of technically adept professionals. The MGMA degree will provide students with knowledge and experience necessary to launch successful careers and tackle these challenges. The program leverages world-leading knowledge and experience necessary to launch successful careers and tackle these challenges. The program leverages world-leading greenhouse gas and climate change expertise from across CSU and enables students from a wide variety of academic backgrounds, such as environmental studies, business, engineering, natural resources or agriculture, to develop the skills needed for emerging professions in greenhouse gas management and accounting.

The Master of Greenhouse Gas Management and Accounting is an affiliated Professional Science Master’s (PSM) degree. Affiliation is administered by the PSM National Office (https://www.professionalsciencemasters.org) to ensure a strong and distinctive PSM brand. PSMs are designed for students who are seeking a graduate degree in science or mathematics and understand the need for developing workplace skills valued by top employers.

### Master of Science in Watershed Science, Plan A

Students in the M.S. in Watershed Science, Plan A work closely with research scientists in the classroom, laboratory, and field on both basic and applied watershed science research. Students are exposed to cutting-edge field, data analysis and modeling techniques through flexible programs of study and access to a breadth of water-related courses throughout the university. Additionally, students participate in seminars, field courses, and practical internships to further develop their skills.

The program emphasizes the advisor/student relationship. There is no core curriculum; rather, the advisor and student develop a program of study that best meets the requirements of the research to be undertaken and the needs of the student, culminating in the completion of a Master’s thesis.

The program has a strong record of employment and acceptance to leading Ph.D. programs after graduation, with graduates holding positions in federal, state, and local natural resource agencies, consulting firms, nongovernmental organizations, industry, teaching, and research. Most students complete coursework that enables them to meet the U.S. government’s Hydrologist certification.

### Requirements

Program requirements are:

- 30 credits that meet graduate school requirements.
- Professional Report
- Selected courses approved by advisor and committee – Prefixes that can be used to meet course requirements: ANTH, AREC, ATS, BZ, CHEM, CIS, CIVE, ECOL, ECON, ENV, ESS, FW, F, GR, GEOL, GRAD, HORT, MATH, NR, NRRT, RS, SOC, SOCR, STAA, STAT, WR.

**Major in Fish, Wildlife, and Conservation Biology**

Professor Will Clements
Chair of the Undergraduate Major

Fish, Wildlife, and Conservation Biology is intended for students interested in understanding wildlife and the habitats in which they live. We offer three concentrations: Conservation Biology, Fisheries and Aquatic Sciences, and Wildlife Biology. The curriculum has a strong foundation in the biological, physical, and social sciences with the focus on solving current and future issues related to conservation and sustainability of wild animals and their habitats. The faculty offers a wide range of expertise with a keen interest in innovative teaching and research methods. Our program prepares students for professional careers involving fish, wildlife, and conservation that include federal and state agencies, nongovernmental organizations, the private sector, academic institutions, and graduate school. Numerous opportunities exist for students to gain experience through research and internships, including professional and career mentoring and involvement with professional societies to further their studies, practical experience, and career potential. Required natural science courses include general biology, vertebrate biology, botany, calculus, and statistics, while required courses in the major focus on wildlife ecology and conservation, principles of wildlife management, design of wildlife projects, conservation biology, fishery science, and wildlife data collection and analysis. Required courses in the concentrations as well as elective courses explore specific areas of fish, wildlife, and conservation biology. A summer field course at CSU's Mountain Campus is required and provides students with hands-on learning about natural resource ecology and measurements. Additional hands-on opportunities exist in courses and study abroad programs. Along with a strong science foundation, problem solving, communication skills and outreach, are important to resolve difficult issues faced by today's natural resource professionals.

**Learning Outcomes**

Students will:

- Demonstrate a mastery of ecological concepts and fundamental principles and techniques to manage and conserve fish and wildlife populations, and how they apply to current natural resource management issues
• Demonstrate mathematical, statistical, and study design knowledge and skills required for careers in fishery, wildlife, and conservation biology

• Become effective in oral and written communication about issues related to the environment and natural resources, including as members of multi-disciplinary teams

• Learn approaches to solving complex natural resource management issues, including planning, organizing, creating, and presenting group projects

Potential Occupations

Federal and state agencies that manage natural resources offer most employment opportunities in fish, wildlife, and conservation biology. Key federal agencies include the U.S. Forest Service, Fish and Wildlife Service, Bureau of Land Management, Geological Survey, National Park Service, Environmental Protection Agency, Bureau of Reclamation, National Marine Fisheries Service, and state departments of wildlife and natural resources. Non-governmental organizations, e.g., The Nature Conservancy, private companies, and environmental consultants also offer excellent opportunities. Participation in internships, independent study/research, volunteer activities, or cooperative education opportunities is highly recommended to enhance practical training and development. Undergraduates who go on for graduate-level studies can attain more advanced positions with the possibility of rising to top professional levels, e.g., researchers and teachers in academic institutions and scientists at natural resource agencies. Our degree is also excellent preparation for veterinary school.

Examples of career opportunities include, but are not limited to: fishery/wildlife/conservation biologist, ecologist, wildlife refuge or natural resource manager, environmental consultant, research scientist, and educator. Within these areas, a variety of specializations are possible including fish, wildlife, and conservation education and interpretation; endangered species; habitat enhancement and restoration; administration; research; law enforcement, fish and wildlife population assessment, statistical analyst, and human-wildlife conflicts.

Concentrations

• Conservation Biology Concentration
• Fisheries and Aquatic Sciences Concentration
• Wildlife Biology Concentration

Major in Fish, Wildlife, and Conservation Biology, Conservation Biology Concentration

The Conservation Biology concentration focuses on understanding the ecological processes necessary to conserve biological diversity with an emphasis on fish and wildlife species and their habitats.

Requirements

Effective Fall 2015

A minimum grade of C (2.000) is required in all biological, mathematical/statistical, physical science, fish, wildlife, and conservation biology and natural resource courses used to meet graduation requirements for the fish, wildlife, and conservation biology major. The minimum applies to courses taken as substitutions for meeting these requirements.

### Major in Fish, Wildlife, and Conservation Biology, Fisheries and Aquatic Sciences Concentration

Fisheries and Aquatic Sciences allow students to focus on a strong background in basic fishery ecology, management, and conservation, which includes an understanding of the linkages between land and water.

Students choosing the Fisheries and Aquatic Sciences concentration are also required to complete at least 160 hours of paid or non-paid employment related to fishery and aquatic biology.

---

### Requirements

**Effective Fall 2015**

A minimum grade of C (2.000) is required in all biological, mathematical/statistical, physical science, fish, wildlife, and conservation biology, and natural resource courses used to meet graduation requirements for the fish, wildlife, and conservation biology major. The minimum applies to courses taken as substitutions for meeting these requirements. Students choosing the Fisheries and Aquatic Sciences concentration are also required to complete at least 160 hours of paid or non-paid employment related to fishery and aquatic biology.

1 Students taking this biology selection should choose a botany-related course in the department elective options to meet botany/plant course requirements for certain federal positions related to wildlife, fisheries, and/or conservation biology.
Students will need to obtain a registration override from the appropriate department to take this course. Students in the Honors Track 1 program must take HONR 499. Students selecting WR 304 only need select three credits. Students selecting one of the geosciences lecture courses (GEOL 120, GEOL 122, GEOL 124) also need to take GEOL 121. Select enough Fisheries and Aquatic Sciences elective credits to bring the program total to 120-121, of which at least 42 must be upper-division (300- to 400-level). Restricted to FW subject code, department travel abroad courses, taught by FWCB faculty. No transfer or substitute courses will be accepted.

Major Completion Map

Distinctive Requirements for Degree Program: The curriculum for the Fish, Wildlife and Conservation Biology major – Fisheries and Aquatic Sciences concentration assumes students enter college prepared to take calculus. Students who have not met the prerequisites for calculus, will be required to successfully complete the prerequisites in their first year. A minimum grade of C (2.000) is required in all biological, mathematical/ statistical, physical science, fish, wildlife, and conservation biology, and natural resource courses used to meet graduation requirements for the fish, wildlife, and conservation biology major. The minimum applies to courses taken as substitutions for meeting degree requirements. NR 220 is a summer course in which students reside at CSU’s Mountain Campus. Students must choose ONE of two CHEM + PH paths: (Path A) CHEM 107/ CHEM 108 and PH 121/ PH 122 OR (Path B) CHEM 111, CHEM 112, CHEM 113, CHEM 114 and PH 110/PH 111. Students must also choose ONE biology group A) BZ 110/BZ 111/BZ 120 or B) LIFE 102/LIFE 103. Students choosing the Fisheries and Aquatic Sciences concentration are also required to complete at least 160 hours of paid or non-paid employment related to fishery and aquatic biology.

Elective

Total Credits

Program Total Credits: 22-27

1. Students taking this biology selection should choose a botany-related course in the department elective options to meet botany/plant course requirements for certain federal positions related to wildlife, fisheries, and/or conservation biology.
2. Students in the Honors Track 1 program must take HONR 499.
3. FW 300 and FW 301 count together as one selection in this choice.
4. Students will need to obtain a registration override from the appropriate department to take this course.
5. Restricted to FW subject code, department travel abroad courses, taught by FWCB faculty. No transfer or substitute courses will be accepted.
6. Technical Electives are courses intended to expand a student's depth and breadth in wildlife biology and include any 300- or 400-level regular course with a BC, BMS, BSPM, CHEM, ESS, F, FW, GES, MATH, MIP, NR, NRRT, PH, RS, SOCR, STAT, or WR subject code (excluding courses ending in -80 to -99); SOCR 240; other course with prior approval by department and advisor. Courses may not double-count as Technical Electives and for other requirements in the major.
7. Select enough elective credits to bring program total to a minimum of 120 credits, of which at least 42 must be upper-division (300- to 400-level).

Major Completion Map

Distinctive Requirements for Degree Program: The curriculum for the Fish, Wildlife and Conservation Biology major – Wildlife Biology concentration assumes students enter college prepared to take calculus. Students who have not met the prerequisites for calculus, will be required to successfully complete the prerequisites in their first year. A minimum grade of C (2.000) is required in all biological, mathematical/statistical, physical science, fish, wildlife, and conservation biology, and natural resource courses used to meet graduation requirements for the fish, wildlife, and conservation biology major. The minimum applies to courses taken as substitutions for meeting degree requirements. NR 220 is a summer course in which students reside at CSU’s Mountain Campus. Students must choose ONE of two CHEM + PH paths: (Path A) CHEM 107/CHEM 108 and PH 121/PH 122 or (Path B) CHEM 111, CHEM 112, CHEM 113, CHEM 114 and PH 110/PH 111. Students must also choose ONE biology group A) BZ 110/BZ 111/BZ 120 or B) LIFE 102/LIFE 103.

Graduate Certificate in Conservation Actions with Lands, Animals, and People

The course content and applied assignments in this graduate certificate seek to integrate a holistic approach for sustainable practices with lands, animals, and people in private and public sectors using history, philosophy, policy, management techniques, leadership, education, and communications to improve environmental management, human interactions, and social/environmental justice.

Students will gain critical insights into issues, uses, and management of natural resources. Students will gain an understanding and develop skills to review situations and viewpoints that impact public and private debate, and use assignments that may influence decisions in conservation. Upon completion of this certificate, students will have foundations to be stronger leaders, better communicators, and more active members of their communities.

The fire and emergency services have a long and proud history of serving their communities with a wide variety of fire protection, prevention, emergency medical, and public education services. The fire and emergency services administrators of the future need advanced administration, management, and leadership skills to address the ever-evolving nature of emergency services. The major prepares students for managerial and officer positions in emergency and fire service organizations.

The major is a degree completion program for students to gain advanced knowledge of emergency service related subjects. The coursework builds upon technical skills and experiences earned in First Responder associate degree programs and on-the-job training. Students will explore key administrative and management areas such as emergency operations, public service budgeting, human resources, prevention, and incident command. The major is focused on the administration and management of First Responder organizations.

All fire and emergency services administration courses are upper-division and offered online via distance education only through the Division of Continuing Education/CSU Online (http://www.online.colostate.edu).

Learning Outcomes

Students will demonstrate their ability to:

- Effectively integrate academic knowledge into fire and emergency services administrative and managerial roles within current and future employment situations.
- Collaborate with peers to solve fire and emergency services organizational problems. Effective collaboration includes the ability to organize and synthesize ideas, develop a persuasive argument, interact with individuals and groups, and use applicable presentation aids.
- Apply their knowledge, skills, and competencies in the fire and emergency services field to fire and emergency services organizations. Examples include knowledge of proposal and report writing, trends in emergency management and incident command systems, and comprehension of public service administration practices.
- Interact with professional First Responders nationally and internationally.

Potential Occupations

Students in the Fire and Emergency Services Administration major should have work experience in the fire and emergency services field. Typical students are employed as career or volunteer firefighters, wildland firefighters, paramedics, emergency medical technicians,
inspectors, or trainers. Graduates can expect positions as fire chiefs, company officers, public administrators, fire marshals, or educators.

**Major in Forestry**

Forest landscapes are always changing, sometimes very slowly as a result of long-term processes, followed by rapid changes as a result of fires or harvesting. Sustaining forests in the modern world requires managers who understand these changes, and how forests connect to global, ecological, and social systems. The Department of Forest and Rangeland Stewardship provides forestry education that spans the entire range of experiences necessary to understand and manage forests. Curricula include a background in the biological, physical, social, and management sciences, followed by professional forestry courses. The degree is accredited by the Society of American Foresters. The curricula meet the Office of Personnel Management requirements for the forestry series (0460) and the forestry technician series (0462).
Major in Forestry, Forest Biology Concentration

Program includes a summer course at the CSU Mountain Campus for field studies in forest ecology, plant and animal identification, wildland fire measurements, forest mapping, and forest measurements. Forestry education is supported by departmental strengths in the full spectrum of land stewardship, including research, and application of knowledge to address real-world issues in forests and communities.

Four concentrations are available in the Forestry major—Forest Biology, Forest Fire Science, Forest Management, and Forestry Business.

Learning Outcomes
Students will:

- Effectively communicate knowledge of forestry and natural resources, both verbally and in writing
- Demonstrate proficiency in subject areas outside their major study focus, including principles/issues in wildlife, water, recreation, wilderness, soil, range, and fishery resources
- Demonstrate comprehensive knowledge of subject areas relevant to the major fields of study in forest sciences, including forest ecology and forest management, and apply this knowledge in a complex, problem-solving environment

Potential Occupations
Careers in forestry and natural resources are exceptionally varied, challenging, and personally satisfying. Opportunities are available in rural and urban settings worldwide. Participation in internships, volunteer activities, or cooperative education opportunities is highly recommended to enhance practical training and development. Positions are available in industry, education, consulting, public service, and government agencies.

Graduates who go on for advanced studies can attain more responsible positions with the possibility of rising to top professional levels.

The demographics of an aging workforce in federal natural resource management agencies will be creating significant opportunities for graduates of this program over the next three to five years.

Some examples of career opportunities include, but are not limited to: forest manager, forest/park ranger, environmental policy and conservation consultant, fire fighter/manager, natural resource journalist, naturalist, land use planner, geospatial information systems specialist, forest products business person, researcher/professor.

Major in Forestry, Forest Fire Science

Concentration

Forest Fire Science is the study of fire as an ecological process and its application as a forest management tool. Students learn how to control wildfires and how prescribed fires can enhance habitat, prepare seedbeds, control forest insects and disease, and reduce fuel hazards.

**Major in Forestry, Forest Management Concentration**

Forest Management is a Forestry concentration designed to instill an understanding of the basic principles of forest ecology and forest management.

Although many students go on to graduate studies, the program is primarily intended for students interested in managing forestlands.

State and federal land management agencies, private forestland owners, consultants, and conservation organizations employ graduates. The curriculum includes a balanced mix of courses in forest biology, integrated forest resource management, and the physical sciences. Students learn about forest productivity, economics, policy, conservation, and the latest in computer-based management tools.

**Major in Forestry, Forestry-Business Concentration**

The Forestry-Business Concentration is for students who wish to study forestry with an emphasis in business. The concentration prepares students for careers in the public sector or private enterprise. Students learn business applications as these relate to forestry. The curriculum includes a mix of Forest Management and Business Administration courses. Graduates may also be eligible for graduate studies in Forestry and M.B.A. programs.

Major in Natural Resources Management

The goal of the Natural Resources Management major is to provide students with a broad-based understanding of the interconnectedness of social, political, and ecological systems. This knowledge will enable students to design sustainable solutions to address natural resource conservation and management problems. Students will learn about natural resource stewardship in both theory and practice, with an eye toward designing systems that are adaptable and resilient in light of the social and ecological complexity and change that characterize today’s challenges. Using an integrative approach, students will learn how to develop local solutions that are sustainable and ethical at larger, global scales. Environmental issues such as land-use change and planning, conservation biology, energy use, climate change, renewable resource management, and citizen engagement in place-based conservation will be addressed. Field measurements and field skills are important components of this major, and students are required to attend a four-week summer field course in ecological investigations and resource management.

Specific objectives are to provide each student with:

1. a science-based core curriculum in biological, physical, and social sciences;
2. a broad foundation in natural resources science and environmental management; and
3. specialization in a subject relevant to natural resources management.

The breadth of the major allows students to specialize in a wide range of topics, including conservation biology, geographic information systems, forest management, rangeland ecology, restoration ecology, natural resource policy, recreation resources, watershed management, wildlife management, or other topics related to natural resources management. This specialization is accomplished by coupling the major with a required minor, typically declared by a student’s junior year.

Students are encouraged to participate in internships and obtain related work experience. Participating in seasonal and voluntary work, internships, and cooperative education opportunities will enhance your chances for permanent full-time employment. The department offers numerous opportunities to become engaged in these kinds of endeavors. At the completion of the program, students should have the technical and communication skills that are critical to resolving important natural resource management problems.

Learning Outcomes

Students will:

- Demonstrate knowledge of a wide range of natural resource topics spanning ecological, social and physical aspects of wildland ecosystems
- Demonstrate proficiency in an area of specialization through completion of a minor in an area complementary to natural resource management. Some minors that students find well-suited to develop a proficiency are Global Environmental Sustainability, Forestry, Rangeland Ecology, Ecological Restoration, Watershed Science, Conservation Biology, or Environmental Affairs, though there are many additional options
- Be able to apply their broad natural resources knowledge to create sustainable solutions at local, national, and global scales
- Accurately communicate their knowledge of natural resources, both verbally and in written form

Potential Occupations

Opportunities are available with a wide array of local, national, and international organizations and institutions involved in natural resource management. Graduates apply their education in science, technology, social science, and policy to solving today’s critical natural resource and environmental problems. Positions are found with federal, state, and local government agencies, industry, and education and advocacy organizations. Some natural resource professionals are employed in environmental consulting firms and corporate environmental departments. The nonprofit sector provides a variety of environmentally-related jobs, ranging from science application to policy development, education, and collaborative conservation.

Examples of available career choices include, but are not limited to: natural resource manager; professional forester; land use planner; geographic information system (GIS) or remote sensing specialist; fishery/wildlife manager; environmental policy analyst; environmental advocate; environmental consultant; resources/environmental lawyer (with continued education); youth agency administrator; natural resource communications specialist; law enforcement officer; natural resources/environmental educator; restoration specialist; multiple resource use planner; regulatory compliance enforcement officer.

Major in Rangeland Ecology

The major in Rangeland Ecology emphasizes interdisciplinary study, research, and management of the world’s rangelands. Rangelands occupy nearly 50 percent of the earth’s land surface and consist of natural grasslands, savannas, shrublands, riparian areas, deserts, tundra, and coastal marshes. Colorado is an ideal setting for the study of rangeland ecology and management with shortgrass steppe to the east and high elevation grasslands, woodlands, and riparian areas to the west.

Students are prepared to understand and manage the animal, soil, and vegetation resources on rangelands for state and federal land management agencies as well as a variety of private companies and non-
governmental agencies. The curricula are accredited by the Society for Range Management and students generally meet the Office of Personnel Management (OPM) requirements for the Rangeland Management Series (0454) and Soil Conservation Series (0457). With a few additional courses, graduates meet OPM requirements for the Ecology Series (0408). Students develop an in-depth understanding of basic plant and animal biology; a basic understanding of the physical sciences as they relate to rangeland ecology; knowledge of important concepts of ecology and range management; an understanding of economics related to recognizing alternatives; and analytical and decision making skills. Students also develop communication, political and interpersonal skills to make their education effective.

Three concentrations are offered: Conservation and Management, Range and Forest Management, and Restoration Ecology.

**Learning Outcomes**

**Students will:**

- Accurately and effectively communicate their understanding of rangeland ecology both verbally and in written form.
- Demonstrate learning of subject areas outside their major study focus, including (but not restricted to) principles/issues in wildlife, water, recreation, wilderness, soil, range, and fishery resources; students will also demonstrate knowledge of social science analytic techniques.
- Demonstrate comprehensive knowledge of subject areas relevant to the major fields of study in range ecology and management, including plant/animal interactions, grazing methods, range improvements, animal nutrition, plant ecology, and soil science, and apply this knowledge in a complex, problem-solving environment.

**Potential Occupations**

Examples of career opportunities include, but are not limited to: restoration ecologist, rangeland scientist, range management specialist, soil conservationist, soil scientist, rangeland conservationist, plant ecologist, riparian ecologist, ranch management, researcher, commercial sales and service representative, consultants, mine rehabilitation specialist, real estate/land manager, international rangeland specialist.

Participation in internships, volunteer activities, or cooperative education opportunities is highly recommended to enhance practical training and development. Graduates who go on for advanced studies can attain more responsible positions with the possibility of rising to top professional levels.

**Concentrations**

- Conservation and Management Concentration
- Range and Forest Management Concentration
- Restoration Ecology Concentration

**Major in Rangeland Ecology, Conservation and Management Concentration**

Rangeland Conservation and Management focuses on the stewardship of rangelands for multiple uses. These uses include both consumptive and non-consumptive activities such as recreation, preservation of wildlife habitat, providing for aesthetic beauty, livestock grazing, and ranching.

**Minor in Ecological Restoration**

The Ecological Restoration minor allows students in related majors to gain knowledge of the science and art of restoring ecosystems. This background is especially valuable to students who will be working in the various natural resource management fields. Since the prevalence of damaged, degraded or destroyed ecosystems is likely to increase in the future, restoration will be imperative for transforming these lands to once again provide ecosystem services.

Students are required to take NR 479: Restoration Case Studies, which includes a required field trip one week prior to the first day of the fall semester.

To get more information about this minor or to officially declare it, please visit warnercnr.colostate.edu/frs/undergraduate-program/advising/ (https://warnercnr.colostate.edu/frs/undergraduate-program/advising/) to make an appointment with an advisor.

## Minor in Forestry

The minor in Forestry provides students with the opportunity to obtain exposure to forest sciences. It provides insight into the management of forested lands and is particularly appropriate for students majoring in other natural resource disciplines or natural sciences.

To get more information about this minor or to officially declare it, please visit warnercnr.colostate.edu/frs/undergraduate-program/advising/(https://warnercnr.colostate.edu/frs/undergraduate-program/advising) to make an appointment with an advisor.

## Minor in Range Ecology

The minor in Range Ecology provides an academic background for students interested in wildlife habitat, integrated land management, ranch management, applied ecology, and international development of arid lands. The minor provides additional flexibility for students who have a liberal arts or international education goal, but would like to increase their employment potential in an applied area. A minimum of 12 credits in the minor must be from Rangeland Ecosystem Science (RS) courses.

To get more information about this minor or to officially declare it, please visit warnercnr.colostate.edu/frs/undergraduate-program/advising/ to make an appointment with an advisor.

## Minor in Range Ecology

The minor in Range Ecology provides an academic background for students interested in wildlife habitat, integrated land management, ranch management, applied ecology, and international development of arid lands. The minor provides additional flexibility for students who have a liberal arts or international education goal, but would like to increase their employment potential in an applied area. A minimum of 12 credits in the minor must be from Rangeland Ecosystem Science (RS) courses.

To get more information about this minor or to officially declare it, please visit warnercnr.colostate.edu/frs/undergraduate-program/advising/ to make an appointment with an advisor.

Major in Geology

The Geology major constitutes a broad curriculum that allows students to obtain a sound academic and practical basis for professional geosciences careers. Common careers include private and public sector water, energy, mineral and other natural resources, geological hazards, regulatory management, and education. The major also provides a solid background for subsequent graduate training in specialized fields that include economic geology, hydrology, geophysics, environmental geology, resources management, public policy, and many other areas.

The Geology curriculum provides a technical background within the broader framework of a liberal education. Emphasis is placed on integrating field studies in the Rocky Mountains and elsewhere with on-
campus classroom and laboratory work. In addition to a solid core in geology, students complete substantial course work in math, the physical sciences, communications, and the liberal arts that lead to effective quantitative, decision making, and communications skills. Four Geology major concentrations are offered: Environmental Geology, Geology, Geophysics, and Hydrogeology.

Learning Outcomes
Students will demonstrate:

- A solid foundation in the physical sciences and broad understanding of geological processes
- Application of scientific reasoning skills to data analysis and problem solving in the geosciences, both individually and in teams
- An awareness of sociopolitical and economic factors and ethical practices and standards that apply to careers in geosciences

Potential Occupations
A variety of opportunities exist for Geology graduates in the private and public sectors. Energy companies, industry service companies, mining companies, power companies, computer software companies, and diverse entrepreneurs all hire geologists for exploration, development, production, communications, and research. Federal government agencies use geologists for mapping, oil-gas-coal-groundwater-geothermal resource evaluation, geochemical and resource-related water studies, leasing and conservation studies, resource restoration and rehabilitation programs, hazards mitigation, regulatory activities, and research. State and local governments typically hire geologists for geologic and soils mapping, natural resource and hazards evaluation and mitigation, public information, consulting, and communications. Environmental, engineering, and groundwater firms employ geologists for mapping, restoration and rehabilitation planning, monitoring and evaluation of geologic hazards, and site evaluation for feasibility and implementation of construction projects, water management and reuse evaluation, groundwater pollution assessment and remediation, and contaminant prevention. Schools, colleges, universities, national laboratories, and private research firms employ geoscientists in a variety of teaching, research, and administrative positions.

Participation in internships, volunteer activities, or cooperative education and public outreach is highly recommended and supported by the department to enhance practical training and development. Graduates who wish to go on to advanced studies acquire a strong disciplinary base to continue in a number of geoscience disciplines and related fields of study, including seismology, hydrology, meteorology, oceanography, and the space sciences. Geoscientists with advanced degrees can attain more responsible professional positions with the possibility of rising to top professional levels of management. Example career possibilities include, but are not limited to: educator, professor, environmental or geological consultant, exploration geologist, petroleum geologist, environmental geologist, geophysicist, hydrologist, mining geologist, oceanographer, production geologist, researcher, resource evaluator, geobiologist, or seismologist. With additional training, geosciences graduates may also pursue careers in business, law, medicine, public policy, and other diverse professional fields. By obtaining teaching certification, graduates can become educators in Earth sciences and related subjects in primary and secondary schools.

Concentrations
- Environmental Geology Concentration
- Geology Concentration
- Geophysics Concentration
- Hydrogeology Concentration

Major in Geology, Environmental Geology Concentration
Environmental Geology students develop expertise in surface and shallow-subsurface processes that shape the Earth and provide important soil and water resources and services for human and natural use. Graduates will be prepared for employment opportunities that address environmental implications of geological process and human activities on Earth. The curriculum emphasizes courses spanning the fundamentals of geology, surface, and shallow-subsurface processes, field-based research methodologies, and environmental geology. The concentration empowers students to pursue positions with public, private, and nonprofit organizations that address environmental/natural resource management issues, regulatory agency compliance, hazard identification and mitigation, and fundamental scientific investigations that can inform natural resource policy and decision making and promote sound stewardship of Earth resources. The curriculum also provides a strong foundation for those planning to continue on to graduate studies.

### Major in Geology, Geology Concentration

The Geology concentration provides comprehensive, broad-based training in geology, emphasizing a practical and field-oriented approach that is well-suited to employment opportunities as a geologist in the energy and mining industries, government agencies, consulting firms, and other geologic fields. In addition the Geology concentration provides excellent background for many other professions, including secondary school teachers, science writers, lawyers specializing in environment and resource issues, and resource or hazards specialists in the insurance, real estate, and securities fields. The Geology concentration provides students with an excellent background to specialize in later and a strong basis for graduate studies in geology.

Major in Geology, Geophysics Concentration

The Geophysics concentration combines a strong foundation in geology with additional depth in geophysics, physics, and mathematics, and in associated quantitative and computer skills. Students pursuing this concentration are well prepared both for employment opportunities in a wide variety of geological or geotechnical fields, and for subsequent graduate training in geophysics, including seismology, geodynamics, energy exploration, environmental geophysics, and resource management.

Major in Geology, Hydrogeology Concentration

The Hydrogeology concentration provides training in geological aspects of water resources and allied disciplines, while ensuring that students are well prepared for a variety of geological fields. Students pursuing this concentration will be particularly well prepared for employment in environmental, engineering, water resource, geotechnical, and groundwater firms, government agencies managing or assessing water resources, or for subsequent graduate training in hydrogeology or other water resource-related disciplines.

Major in Human Dimensions of Natural Resources

The source of many challenges in natural resources involves human behavior, and solutions to those challenges requires innovative problem-solving, deep understanding of complex issues, and collective action. This major is focused on understanding the social aspect of natural resources, and developing the skills to assess, plan and implement strategies that lead to successful conservation. Curriculum for this major trains students in the areas of communication, leadership, collaboration, conflict management, decision-making, planning, and protected area and land management practices.

Learning Outcomes

Students will:

• Understand collaborative tools for contributing to conservation solutions
• Apply social science concepts and techniques to understand and address conservation problems
• Attain a breadth of understanding of how different social science disciplines can contribute to conservation
• Describe the linkages between conservation and human livelihoods, ecosystem services and human well-being
• Practice and use adaptive and effective planning and environmental communication techniques
• Practice and use core principles of protected area management
• Become adept at conservation problem solving and linking knowledge, understanding and practice

Potential Occupations

Students are prepared for various positions with local, state and federal land management and natural resource agencies in the United States. Opportunities are also available both domestically and abroad with non-governmental, and nonprofit conservation and development organizations as well as private foundations. Examples of the types of positions include conservation planner/administrator, environmental communication specialist, conservation/environmental educator, nature center coordinator, visitor services manager, public outreach coordinator, public information officer, protected area manager, park/wilderness ranger, communication coordinator, policy liaison, environmental analyst and others.

Program Total Credits: 120

---

**Major in Natural Resource Recreation and Tourism, Environmental Communication Concentration**

Students are no longer being accepted into this program of study. Students interested in this area of study, please see the major in Human Dimensions of Natural Resources.

Students should refer to the 2016-2017 General Catalog for the approved curriculum.

Students currently enrolled in this program should consult with an advisor regarding completion requirements.

**Major in Natural Resource Tourism**

Graduates possess technical skills in problem solving, systems planning, integrative team decision making, quantitative analysis, oral and verbal communications, and computer operations. Graduates are familiar with skills useful in a business setting and the historic evolution of environmental conservation. Additionally, graduates develop an appreciation for how their discipline contributes to environmental stewardship and sustainability. Two concentrations are offered—Global Tourism and Natural Resource Tourism.

**Learning Outcomes**

Students will demonstrate:

- Written and oral communication skills, with a focus on writing skills. Student writing and speaking will embody characteristics that represent attention to high quality communication skills, including substance of the issue addressed, organization of the paper or presentation, mechanics, and evidence.
- Research and analytical skills. These skills will include the ability to generate a problem statement, associated research questions, data acquisition methodologies, synthesis of related information and the development of management implications and conclusions.
- Planning skills. These will involve an ability to implement the planning process, including setting goals and objectives, acquiring relevant background information, synthesizing information, conceptualizing ideas, constructing alternative courses of action, making recommendations and considering ways of evaluating decisions.

**Potential Occupations**

Graduates primarily work in a variety of private commercial tourism and recreation enterprises. Competition can be intense for full time/permanent positions in highly attractive natural resource locations, although ample opportunities exist to gain experience through seasonal/temporary and volunteer work. Participation in a high quality, pre-approved internship is required for the degree. Graduates who go on for advanced studies can attain more responsible positions with the possibility of rising to top professional levels.

Career opportunities available to graduates in the global and natural resource tourism concentrations include, but are not limited to: retail relations manager; social media planner; convention sales coordinator; marketing/public relations specialist; trip counselor; travel account manager; food and beverage supervisor; small tourism enterprise/ecotourism owner/manager; regional sales director; account executive; director of trail development; tourism planner; travel pricing and demand analyst; concession specialist; marketing/sales manager; conference/meeting/event planner; resort services director; member relations director; purchasing manager; camp and nature center director; tourist information center manager; sustainable energy director.

**Concentrations**

- Global Tourism Concentration
- Natural Resource Tourism Concentration
### Major in Natural Resource Tourism, Global Tourism Concentration

The Global Tourism concentration is focused on a unique blend of subjects. Business and tourism topics provide students with planning, management, marketing, financial, and entrepreneurship skills essential in the tourism industry. Because sustainable tourism requires a healthy natural environment, the environment is another area of study. Finally, students are provided cross-cultural experience by learning a second language, studying at a university abroad, and participating in an international internship.

College Programs

Our goal is to provide an extraordinary education to students in order to prepare them for science careers in industry, modern research and academia. In addition, the College of Natural Sciences provides foundational courses in the biological, mathematical, behavioral, and physical sciences for CSU’s seven other colleges, supporting CSU’s broad liberal arts and general education objectives.

Undergraduate Majors

The college’s eight departments offer twelve undergraduate majors, all leading to a Bachelor of Science degree which requires a minimum of 120 credits including 42 or more credits in upper-division courses. The undergraduate major in Neuroscience is offered jointly with the College of Veterinary Medicine and Biomedical Sciences.

A major should be chosen based with both educational and career objectives in mind. Students earning degrees in College of Natural Sciences majors will be well prepared to succeed in careers in biochemistry, biology, chemistry, computer science, mathematics, physics, and statistics, including middle/high school science and math instruction. Students who plan to enter a human- or animal-health profession must formally declare an academic major. There is no specific premedical, pre-veterinary, etc. major at CSU because health profession programs do not require a specific major, only specific courses. Majors such as Biological Sciences, Biochemistry, Chemistry, Psychology and
Zoology are popular for students interested in a career in the health professions.

All College of Natural Sciences students have the ability to work with an academic advisor to plan the coursework necessary to graduate from CSU. The College of Natural Sciences also provides students with the opportunity to seek specialized career counseling through a satellite office of the CSU Career Center housed in the Statistics building. Our services are offered to all Natural Science students and alumni in all aspects of their career development. Additionally, pre-health professions advisors are located at the Collaborative for Student Achievement (http://www.casa.colostate.edu), in The Institute for Learning and Teaching (TILT) building, Room 121.

The college provides multiple opportunities for students to become engaged outside the classroom, including the Student Ambassadors program, Student Leaders in Science, the College of Natural Sciences Learning Community (a residential learning community), and undergraduate research opportunities.

Education Abroad

Education abroad programs are available to all students in the College of Natural Sciences. Because the knowledge of another culture is valuable in understanding one's own, students are strongly encouraged to participate in at least one educational experience outside of the United States as part of their overall program at CSU. Students interested in education abroad should plan, well in advance, by discussing opportunities with their academic advisor and by visiting the Education Abroad Office through the Office of International Programs (http://educationabroad.colostate.edu). The Education Abroad office offers information about credit and non-credit opportunities (service-learning/volunteer, research, internships), as well as support prior to and during travel, information about scholarships and financial aid, and resources for diverse populations (including adult learners & veterans, multicultural students and students with disabilities).

Graduate Programs

Faculty and graduate students in the College of Natural Sciences are engaged in cutting-edge research in multiple disciplines and the college is proud of the graduate student education it provides. Master of Science and Doctor of Philosophy degrees are offered by all departments and a Master of Natural Sciences Education is offered through the college. The college also offers a Professional Science Master's in Natural Sciences with a specialization in Zoo, Aquarium and Animal Shelters. For detailed information about graduate degree programs consult the appropriate department and see the Graduate and Professional Bulletin.

Major in Natural Sciences

The Bachelor of Science in Natural Sciences meets the needs of two audiences:

- Students who want to become high school or junior high/middle school science teachers.
- Students who want a broad exposure to mathematics and the physical sciences, rather than specialization in one discipline.

Learning Outcomes

Students will demonstrate:

- Skills to critically interpret scientific data.
- Logical and critical thinking.
- Analysis and solving of complex problems.
- Strong written and oral communication skills.

Potential Occupations

Graduates with licensure in secondary science education will find a strong demand for high school and junior high/middle school teachers in Colorado and elsewhere in the nation. In addition, these graduates will also have the background required for graduate science education programs.

With proper planning, physical science graduates can meet requirements for professional schools (e.g., medicine or law) or graduate programs in the basic or applied sciences. Internships and volunteer activities can provide practical training and experience.

Secondary Education

The Bachelor of Science in Natural Sciences degree provides the subject matter, the education classes, and the classroom experience required for secondary science education licensure in Colorado.

Concentrations in the Natural Sciences major include: Biology Education, Chemistry Education, Geology Education, and Physics Education.

The program includes science courses in a concentration such as Biology, Geology, Physics, Chemistry; the All-University Core Curriculum and professional classes in the Center for Educator Preparation (CEP) (http://cep.chhs.colostate.edu) program in the College of Health and Human Sciences. In addition, the CEP program helps schedule classroom visits and practica. The experience culminates in a semester of student teaching under the supervision of a master teacher.

Major in Natural Sciences, Physical Science Concentration

The Physical Science concentration begins with two semesters each of calculus, chemistry, and physics, plus a semester of biological science. Students then complete the major by earning two minors selected from Biochemistry, Chemistry, Computer Science, Geology, Mathematics, Statistics, or Physics. Completion of the double minor gives an unusual breadth in the physical sciences. Recent graduates have pursued careers in the sciences. Others use this background as a basis for graduate work and research or for entry into medical or veterinary professional programs.

Master of Natural Sciences Education, Plan C (M.N.S.E.)

The Master of Natural Sciences Education (M.N.S.E.) is an online degree program designed for:

- Current science teachers hoping to learn new pedagogical techniques that contribute to student learning and engagement
- Current science teachers who want the flexibility to teach other natural science disciplines by solidifying their knowledge in biology, chemistry, physics and environmental science
- Current non-science teachers with a natural science undergraduate degree who would like to pursue science teaching positions
- Current non-science teachers with a related undergraduate degree (computer science, agriculture, engineering) and a strong science background who would like to pursue science teaching positions
- Individuals with strong science backgrounds and past or current experience in educational settings who would like to earn a master’s degree in science education and separately pursue a teaching certification

### Master of Science in Materials Science and Engineering, Plan A

The overall objective of the M.S. in Materials Science and Engineering is to develop students to be science and engineering professionals who use their multidisciplinary problem solving skills to address global challenges in the field of materials science and engineering.

The development of advanced materials, including their synthesis, characterization and application in novel devices, occupies a central role in 21st century science, technology and business. Materials research is by its very nature an extraordinarily inter- and multi-disciplinary endeavor, involving expertise in chemistry, physics, and engineering at the core, but also utilizing concepts from various other disciplines as well as business and sociology as materials research is often very focused on creating a product for the marketplace more efficiently and effectively. Indeed, work in this area is concerned with the structure, property and function of materials. Thus, a materials scientist must understand how different combinations of molecules can result in different thermal, mechanical, electrical, optical, and magnetic properties; be able to measure those properties at the atomic, electronic, surface and bulk level; and manufacture usable devices from the resulting materials.

It is imperative that the next generation of materials scientists and engineers be explicitly educated in an interdisciplinary manner. The M.S. in Materials Science and Engineering contains elements that address materials technology transfer, materials manufacturing, and other professional development skills necessary for success in the materials community.

Master of Science in Materials Science and Engineering, Plan B

The overall objective of the M.S. in Materials Science and Engineering is to develop students to be science and engineering professionals who use their multidisciplinary problem solving skills to address global challenges in the field of materials science and engineering.

The development of advanced materials, including their synthesis, characterization and application in novel devices, occupies a central role in 21st century science, technology and business. Materials research is by its very nature an extraordinarily inter- and multi-disciplinary endeavor, involving expertise in chemistry, physics, and engineering at the core, but also utilizing concepts from various other disciplines as well as business and sociology as materials research is very often focused on creating a product for the marketplace more efficiently and effectively. Indeed, work in this area is concerned with the structure, property and function of materials. Thus, a materials scientist must understand how different combinations of molecules can result in different thermal, mechanical, electrical, optical, and magnetic properties; be able to measure those properties at the atomic, electronic, surface and bulk level; and manufacture usable devices from the resulting materials.

It is imperative that the next generation of materials scientists and engineers be explicitly educated in an interdisciplinary manner. The M.S. in Materials Science and Engineering contains elements that address materials technology transfer, materials manufacturing, and other professional development skills necessary for success in the materials community.

Major in Biochemistry

As the name suggests, Biochemistry links biology and chemistry. Biochemistry is most simply defined as the chemistry of living systems. It is the science that tries to explain how "lifeless" molecules work together to make "living" organisms. The methods of chemistry and molecular biology are used to study the structure and behavior of the complex molecules found in biological materials and the ways these molecules interact to form cells, tissues, and whole organisms. Biochemistry provides the basis for advances in human and veterinary medicine, agriculture, and biotechnology. Biochemists may participate in interdisciplinary research and development projects alongside chemical engineers, biologists, microbiologists, agronomists, physicians, and other professionals. They investigate the molecular mechanisms of such diseases as AIDS, diabetes, cancer, heart disease and stroke, and develop solutions to environmental problems through biotechnology.

The Biochemistry major provides a student with a strong, well-balanced background in the biological, physical, and mathematical sciences. As a Biochemistry major, studies include macromolecular structure and function; cellular biochemistry; metabolism; gene expression, DNA and protein structure, DNA replication and repair; cell organization, communication, growth, aging, and death. Students are also required to take courses in physics, organic chemistry, and statistical measurements and methods used in research. Independent study and internships (typically during the junior and senior years, but could start in the freshman year) provide opportunities for experiential learning and working closely with the faculty, sometimes leading to authorship of original publications.

Learning Outcomes

Students will obtain:

• A command of the basic concepts of chemistry, biology, biochemistry, molecular biology, and cellular biology
• The ability to critically analyze, and present the methods, results, and conclusions of scientific papers in the current biochemical literature, and orally present technical material in a clear and comprehensible form
• Experience in use of a variety of laboratory techniques; critically interpret experimental results; and design new experiments
• Demonstrate the ability to perform original research in biochemistry and molecular biology

Potential Occupations

Possible career opportunities include, but are not limited to: process research technician, production/quality assurance lab technician, biomedical/pharmaceutical researcher or salesperson, molecular biologist, biophysicist, cytologist, toxicologist, crime scene investigator, industrial hygienist, dairy technologist, environmental analyst, hygienist, chemist, wastewater treatment chemist, food and drug inspector, museum technician, teacher, writer, fisheries biologist, research analyst, and medical or clinical lab technologist. Many biochemistry majors go on to earn higher degrees in graduate school or health care related professional schools, leading to careers in medicine, veterinary medicine, pharmacy, or law.

Concentrations

• General Biochemistry Concentration
• Health and Medical Sciences Concentration
• Pre-Pharmacy Concentration

Major in Biochemistry, General Biochemistry Concentration

This concentration is designed to provide a broad education in biochemistry and can be tailored to meet the individual needs of specific students. The general degree is recommended for students considering research and/or teaching as a career.

Requirements

Effective Fall 2017

A minimum grade of C (2.000) must be earned for BC 493 and all biochemistry (BC) and LIFE subject code lecture and laboratory courses at or above the 200-level required in the biochemistry major.

1. Select from the list of courses in categories 3B-3E (six credits [two courses] must come from 3B; one course each from categories 3C, 3D, and 3E) in the AUCC. Only 3 of the 6 credits required for Arts and Humanities may come from intermediate (L*** 200 and L*** 201) foreign language courses.

2. Select in consultation with advisor using list approved by the department.

3. Select enough elective credits to bring the program total to a minimum of 120 credits, of which at least 42 must be upper-division (300- to 400-level).

### Major Completion Map

#### Distinctive Requirements for Degree Program:

**TO PREPARE FOR FIRST SEMESTER:** The curriculum for the Biochemistry major # General Biochemistry concentration assumes students enter college prepared to begin a year#long calculus sequence (either MATH 155/MATH 255 or MATH 160/MATH 161) in the first semester of their first year. LIFE 102 requires high school chemistry as a prerequisite; CHEM 111 requires Algebra II as a prerequisite (this prerequisite is met by having Algebra II by test credit, transfer credit, or placement out of MATH 117 and MATH 118 on Math Placement Exam).

This concentration augments the General Biochemistry Concentration with additional coursework in anatomy and physiology, the biochemistry of disease, and medical internship by requiring an additional 14-15 credits of concentration-specific coursework. The Health and Medical Sciences concentration is geared toward students interested in medical, veterinary, or dentistry careers.

Requirements
Effective Fall 2016
A minimum grade of C (2.000) must be earned for BC 493 and all biochemistry (BC) and LIFE subject code lecture and laboratory courses at or above the 200-level required in the biochemistry major.

Minor in Biochemistry

The minor is valuable to students majoring in any biological or physical science or in engineering. The minor requires a sound chemistry background, provides fundamental courses in molecular biosciences, and augments the latter with more specialized courses in biochemistry and molecular genetics.

Requirements

Effective Fall 2010

Students must satisfactorily complete the total credits required for the minor. Minors and interdisciplinary minors require 12 or more upper-division (300- to 400-level) credits.

Additional coursework may be required due to prerequisites.

**Major in Biological Science**

Biology is the study of all living things—including microscopic bacteria and viruses, plants, and animals, and their relationship to their environments. Biology majors study the structure and function of cells, organ systems and tissues of animals and plants, ecology (the relationship between living things and their environment), animal behavior, genetics/genomics and evolution. They learn about physiology, behavior, genetics and heredity, aquatic systems, microscopic organisms such as bacteria, and techniques for diverse areas ranging from field research to biotechnology. This major provides a solid foundation of understanding the basic biological sciences. It also offers an opportunity to choose an area of emphasis within life sciences that relates to particular career goals (for example: the ecology of organisms, cell and molecular biology, biomedical professions, aquatic biology, marine biology, plant molecular biology for agricultural biotechnology and bioenergy, evolutionary biology, etc.).

**Learning Outcomes**

Students will:

- Interpret scientific data both mathematically and statistically.
- Demonstrate organizational and laboratory skills.
- Define scientific hypotheses and design experiments or observations to test them.
- Work effectively in groups.
- Demonstrate strong writing and oral communication skills.

**Potential Occupations**

Training in biology prepares students for a very large number of occupations. Some involve daily interaction within teams, others can be done in relative isolation; some are highly focused, but most require knowledge far beyond the sciences. Career options related to biology include water quality assessments, field and lab technician work, biotechnology in biomedical sciences and agriculture, genetic research, agriculture, or sales (i.e., pharmaceutical, agricultural). Graduates work in small businesses, multinational corporations, academia, and government research laboratories and policy agencies. A degree in biological science offers a broad foundation for professional degrees in nursing, dental, medical or veterinary school, and a number of health professions such as physician's assistant, physical therapy, occupational therapy, optometry or public health. Graduates often pursue advanced degrees in life sciences to carry out basic research or advance into leadership positions in industry. Participation in internships and/or laboratory research experience is highly recommended and strongly encouraged by the department to enhance practical training and development.

Combining biology with additional skills can lead to exciting careers. Biology and computer science can be linked to the ever-expanding and exciting area of bioinformatics. Biology and writing can be incorporated into a career as a technical writer or science fiction novelist. Biology and visual arts combine in medical and scientific illustration. Biology and other humanities may lead to studies of the history of science or medicine. Work in both biology and philosophy/religion can be incorporated in careers in bioethics. Biology is linked with psychology for the neuroscientist or genetic counselor. Study biology and political science to work in environmental law or be a patent lawyer in biotechnology. Try mixing biology and business to get into hospital administration, small business or biotechnology administration. Specialized master’s degrees are designed for many of these unique career paths.

Some career opportunities include, but are not limited to: aquarium, zoo, and museum worker; assistant research scientist; research technician in industry or university laboratories; biology photographer; biotechnologist; brewery laboratory assistant; consumer product researcher; marine bacteriologist, field ecologist; nuclear medicine technician; park naturalist; pharmaceutical researcher or salesperson; public health officer; science librarian; environmental educator, health specialist, or impact specialist; fisheries biologist or conservationist; industrial hygienist; occupational therapist (with a master’s degree); and medical or clinical laboratory technologist.

**Concentrations**

- **Biological Science Concentration**
- **Botany Concentration**

**Major in Biological Science, Biological Science Concentration**

The curriculum includes a two-semester introductory biology sequence, cell biology, developmental biology, ecology, evolution, and genetics. Required courses in the physical sciences include a minimum of one year in introductory chemistry and in physics (with labs), and at least one course in organic chemistry (with lab), and one in biochemistry. A calculus course and a statistics course are also required. In addition, students choose a selected field of 12 credits in one of the following: anatomy/physiology, aquatic biology, behavioral biology, cellular/molecular and genetic biology, ecology, evolution/genetics, and systematics, microbiology, or integrative organismal biology. There is an additional requirement of one course in two other fields, which assures a broad base of study.

**Requirements**

**Effective Fall 2015**

To be qualified for graduation, students in the Biological Science major must have a minimum grade of C- in each of their biological, physical science, and mathematical courses used to meet requirements for the major. This applies to courses taken as substitutions for meeting these requirements. The minimum scholastic average acceptable for graduation is 2.000 computed only for courses attempted at CSU.

**Major in Biological Science, Botany Concentration**

Botany is the general study of plants and plant-like organisms from microscopic algae to giant redwoods, from mushrooming fungi to flowering angiosperms. Plant anatomy, how plants grow and develop, and how they survive and interrelate within their environments are topics of study. For students who like the outdoors, a career in plant ecology, taxonomy, or forestry might be appealing. Students attracted to the beauty and design of the microscopic world might enjoy a career in plant anatomy or plant developmental biology. Those interested in
chemistry might enjoy plant biochemistry, molecular biology, or plant biotechnology. Those intrigued by plant diseases might become plant pathologists and the mathematically oriented might explore systems ecology, genetics, or plant biotechnology.

The Botany curriculum begins with a solid foundation in mathematics, the biological sciences, chemistry, organic chemistry, physics, evolution, and genetics. Botany emphasizing terrestrial plant studies including plant systematics, anatomy, and ecology, biochemistry, and earth sciences round out the core. Botany students also take liberal arts and communications courses to give breadth to their education.

### Requirements

**Effective Fall 2015**

To be qualified for graduation, students in the Biological Science major must have a minimum grade of C- in each of their biological, physical science, and mathematical courses used to meet requirements for the major. This applies to courses taken as substitutions for meeting these requirements. The minimum scholastic average acceptable for graduation is 2.000 computed only for courses attempted at CSU.

Major in Zoology

Zoologists study animals—their origin, behavior, diseases, and life processes. Some experiment with live animals in controlled or natural surroundings while others study the structure and function of animal cells, tissues, and organ systems. Some zoologists go on to study veterinary medicine. Zoologists participate in research that has practical outcomes in farming, medicine, pharmacy, wildlife conservation, and pest control. Zoology encompasses many specialties. At CSU, students may focus on general training in animal biology or choose a concentration in the following areas: animal behavior, development, aquatic biology, ecology (how animals adapt to their environments), genetics and evolution, invertebrate organisms, cellular/molecular biology and physiology, systematics, and morphology of vertebrate organisms.

The curriculum is designed to provide a basic understanding of zoology through a variety of laboratory experiences in combination with the study of basic theories and defining concepts. The program encourages flexibility, strength, and depth. The course work includes a two-semester introductory biology sequence, one course each in invertebrates and vertebrates, and courses in evolution and ecology. Required courses in the physical sciences include a minimum of one year of introductory chemistry and at least one course in organic chemistry, two courses in physics (all with labs) and one in biochemistry. A course each in calculus and statistics is also required. In addition, students select a minimum of 15 credits of Zoology courses in their chosen areas of concentration.

Learning Outcomes

Students will:

• Interpret scientific data.
• Demonstrate strong organizational and laboratory skills.
• Define scientific hypotheses and design experiments to test them.
• Work effectively in groups.
• Demonstrate strong writing and oral communication skills.

Potential Occupations

This major prepares students to work in various areas of zoology, such as research or private industry, or to begin graduate school or professional studies. Career opportunities include medical biotechnology, research technician, protective agencies such as shelters and refuges, trainers and handlers, animal-related business, aquatic/marine biologists, exotic animal specialists, and wildlife conservation. It is an appropriate major for students planning to attend medical or veterinary school. Graduates often pursue advanced degrees to carry out basic research or advance into leadership positions in industry. Participation in internships, laboratory, or research opportunities is highly recommended and encouraged by the department to enhance practical training and development.

Additional careers for Zoology majors include, but are not limited to: aquarium and museum curator/director; zoo keeper, animal trainer and instructor, science librarian, environmental technician, fish and wildlife technician, veterinary technician/assistant, marine bacteriologist or biologist or ecologist, humane society positions, cytotechnologist, ecologist, fisheries biologist or conservationist, laboratory technician, marketing researcher, medical technologist, park ranger, pharmaceutical sales representative, production supervisor, quality analysis technician in food or pharmaceutical industry, radiation protection technician, research technician, industrial hygienist, wildlife photographer.

Requirements

Effective Fall 2017

To be qualified for graduation, students in the Zoology major must have a minimum grade of C- in each of their biological, physical science, and mathematical courses used to meet requirements for the major. This applies to courses taken as substitutions for meeting these requirements. The minimum scholastic average acceptable for graduation is 2.000 computed only for courses attempted at CSU.

### Major Completion Map

**Distinctive Requirements for Degree Program:**

TO PREPARE FOR FIRST SEMESTER: The curriculum for the Zoology major assumes students enter college prepared to take calculus. Entering students who are not prepared to take calculus will need to fulfill pre# calculus requirements in the first semester. LIFE 102 requires high school chemistry as a prerequisite; CHEM 111 requires Algebra II as a prerequisite (this prerequisite is met by having Algebra II by test credit, transfer credit, or placement out of MATH 117 and MATH 118 on Math Placement Exam). Earned grade of C or better is required in each of their biological, physical science, and mathematical courses used to meet requirements for the major. Term 5 may have to be adjusted if the student chooses 2 semesters of Organic Chemistry. Do not attempt BZ 310 and BZ 350 before Junior year. Do not take BZ 350 and BZ 310 together.

Chemists study the atomic and molecular structure of physical matter and analyze how it changes. More specifically, they investigate how basic atomic and molecular components are combined and can be manipulated to produce useful or improved products. They also develop methods to measure atomic and molecular properties and their interactions enabling insight into a range of processes from mining to clinical diagnostics. Chemistry majors develop a solid foundation in general chemistry and mathematics followed by course work in organic chemistry, analytical chemistry, physical chemistry, inorganic chemistry, biochemistry, and physics. The curriculum is rounded out by courses in the liberal and communications arts.

Chemistry majors are encouraged to participate in undergraduate research. Ample opportunities exist for undergraduate students to become involved in ground-breaking research in the laboratories of individual faculty members. Students have access to state-of-the-art equipment in faculty laboratories and in the Central Instrument Facility including NMR, FTIR, UV/Vis, fluorescence, and mass spectrometers, vacuum lines, x-ray diffractometers and many more. Undergraduate research is strongly encouraged for any student considering a career in chemistry and many students complete supervised research for academic credit.

**Learning Outcomes**

Chemistry students will:

- Organize, critically evaluate, and present chemical information coherently through oral and written discourse
- Upon obtaining a Bachelor of Science degree in chemistry, demonstrate contemporary skills and knowledge necessary for entry-level positions in chemical industry and allied fields, or for admission to a graduate or professional school
- Demonstrate original research skills, namely the ability to plan investigations allowing them to resolve research questions, conduct such theoretical and/or laboratory experimentation, solve problems arising in such situations and interpret and communicate results

**Potential Occupations**

Chemists are employed in a vast array of professional fields in private industry, government, and education. Chemists work in research and development, analysis and testing, consulting, industrial quality control and assurance, environmental resource management, and forensics. Principal employers are petrochemical firms, biotechnology firms, consumer chemical firms, environmental testing laboratories, pharmaceutical companies, agricultural companies, governmental regulatory agencies, governmental and educational research laboratories, and manufacturing firms. Many chemists are also engaged in startup companies. Chemistry is also an excellent major for those preparing for careers in veterinary medicine and the health professions. Students whose career goals involve teaching at the secondary school level have the opportunity to complete the teacher licensure program through the School of Education (http://soe.chhs.colostate.edu).

Many possible occupations for chemists include, but are not limited to: agricultural chemist, air and water quality analyst, biochemistry technician, chemical sales and marketing representative, clinical chemist, consultant, educator, forensic analyst, laboratory technician/bench chemist, materials analyst, patent examiner, pharmaceutical chemist, polymer technician, technical writer, and toxicologist.

**Concentrations**

- ACS Certified Concentration
- Non-ACS Certified Concentration
Major in Chemistry, ACS Certified Concentration

Students who wish to work as professional chemists should select the ACS Certified Concentration to obtain professional certification by the American Chemical Society. The ACS-approved curriculum comprising this concentration offers an extensive and rigorous chemistry education that gives students intellectual, experimental, and communication skills to become effective chemistry professionals.

1. Select from the list of courses in category 3A of the All-University Core Curriculum (AUCC) with BZ or LIFE subject codes. Must include a laboratory.
2. CHEM 499 Senior Thesis by department approval. Students fulfilling the AUCC 4C requirement with CHEM 499 must write a thesis and present it to the department.
3. Select additional Advanced Science Electives courses (upper-division, 300- to 400-level) to total at least 10 credits when combined with the choice of BC 351 or BC 401 in the junior year.
4. Select enough elective credits to bring the program total to a minimum of 120 credits, of which at least 42 must be upper-division (300- to 400-level).

**Major Completion Map**

**Distinctive Requirements for Degree Program:**

TO PREPARE FOR FIRST SEMESTER: The curriculum for the Chemistry major # ACS Certified concentration assumes students enter college prepared to take calculus. Entering students who are not prepared
to take calculus will need to fulfill pre-calculus requirements in the first semester. CHEM 111 requires Algebra II as a prerequisite (this prerequisite is met by having Algebra II by test credit, transfer credit, or placement out of MATH 117 and MATH 118 on Math Placement Exam). Earned grades of C or better are required in all listed courses for the major in chemistry.

**Major in Chemistry, Non-ACS Certified Concentration**

Students may also opt to complete the non-ACS Certified Concentration. This concentration provides a more flexible, yet comprehensive chemistry curriculum for students and can be attractive when pursuing professions for which chemistry is not the major focus.

**Requirements**

**Effective Fall 2017**

Chemistry majors must achieve a minimum grade of C in all the listed courses required for the major in chemistry.

3. Additional mathematics: 300-level MATH, CS, or STAT course.
4. CHEM 499 Senior Thesis by department approval. Students fulfilling the AUCC 4C requirement with CHEM 499 must write a thesis and present it to the department.
5. Select enough elective credits to bring the program total to a minimum of 120 credits, of which at least 42 must be upper-division (300- to 400-level).

**Major Completion Map**

**Distinctive Requirements for Degree Program:**
TO PREPARE FOR FIRST SEMESTER: The curriculum for the Chemistry major # Non-ACS Certified concentration assumes students enter college prepared to take calculus. Entering students who are not prepared to take calculus will need to fulfill precalculus requirements in the first semester. CHEM 111 requires Algebra II as a prerequisite (this prerequisite is met by having Algebra II by test credit, transfer credit, or placement out of MATH 117 and MATH 118 on Math Placement Exam). Earned grades of C or better are required in all listed courses for the major in chemistry.

Program Total Credits: 30

A minimum of 30 credits are required to complete this program.

Additional Requirements

- Incoming students must demonstrate undergraduate proficiency in analytical, inorganic, organic, and physical chemistry by having received (at their undergraduate institution) or by receiving (upon matriculation at CSU) a B- in the appropriate undergraduate course(s) or by passing an exam in the aforementioned subjects administered by the chemistry department, or by any combination of these ways to demonstrate undergraduate proficiency in the four subjects.
- Students must pass 2 cumulative exams, or the equivalent, which are given monthly 9 times each year, in no more than 12 attempts.
- Students must pass a faculty-refereed scientific presentation.

Students may fulfill this requirement in one of three ways:

- Students may give a public seminar based on the scientific literature;
- Students may give a public seminar based on their thesis research;
- Students may pass the Preliminary Oral Exam for the Ph.D. degree.

1 Select courses with advisor approval according to department guidelines.
2 Up to 9 credits of CHEM 698 may be satisfied by CHEM 799.
3 See instructions available from the chemistry department.

Minor in Chemistry

The Chemistry Department offers a minor in Chemistry to interested students from other disciplines. The program serves to broaden the academic background of students seeking employment in fields related to chemistry.

Requirements

Effective Summer 2017

Students must satisfactorily complete the total credits required for the minor. Minors and interdisciplinary minors require 12 or more upper-division (300- to 400-level) credits.

Major in Computer Science

Computer Science is the study of algorithms and software systems: their theory, analysis, design, efficiency, implementation, maintenance, and application. Computer scientists seek to advance the fundamental understanding of how information is processed, as well as the practical design of software to perform specific functions. Computer science courses include, but are not limited to, the study of algorithm design, networks, security, programming languages, software engineering, graphics, databases, and artificial intelligence.

Computer Science majors are required to complete basic courses in calculus, core courses in programming and mathematical foundations, computer organization, data structures, software engineering, algorithmic theory, computer security, and systems software. An understanding of statistics is also required. Majors select senior-level courses from offerings such as graphics, artificial intelligence, networks, compilers, bioinformatics, architecture, parallel programming, cloud computing, big data, and database systems. A minor in Computer Science is also available.

Department of Computer Science laboratories are open to students 24/7. All major systems are networked and accessible by direct network connection from student residences.

Learning Outcomes

Students will:

- Demonstrate proficiency in the areas of software design and development, computing systems, and algorithmic analysis. Students will, upon completing this program, have a thorough grounding in the key principles and practices of computing, and in the mathematical and scientific principles of computation
- Be able to work effectively in groups to develop computational solutions to complex problems
- Be able to communicate ideas effectively, both generally and specifically, with regard to technology and computing
- Upon completing this program, either attend graduate school in computer science or find professional computer-related employment

Potential Occupations

The vast majority of Computer Science students are able to find related employment at graduation. The proven performance of CSU graduates has resulted in annual recruiting visits by a wide variety of commercial firms, government agencies, and research laboratories. Graduates have found employment as software developers and with research and development teams in government and industry. Internships are readily available that enhance skills and marketability.

Some career opportunities include, but are not limited to: systems programmer, software designer, computer researcher, software engineer, software tester, systems administrator, security systems designer, database programmer, consultant, technical product support personnel, and educator.

Major in Computer Science, Human-Centered Computing Concentration

This concentration is designed to meet the demand for experts in human-centered computing and interface design, and provide an academic program for students interested in the interdisciplinary study of cognitive psychology and artificial intelligence applied to human-computer interaction.

This program contains as much math and nearly as much computer science (within a few courses) as the computer science major, combining those courses with insight into the design, development and evaluation of User Interfaces, an important specialization within software development teams in industry and other organizations.

### Major in Applied Computing Technology

The Applied Computing Technology major is a program oriented towards the use of computing technology and programming in specialized ways rather than towards developing large-scale systems and enterprise-level computer software. Students will receive a strong background in computer programming and information technology aimed towards a specific application area. At this time there are two concentrations: computing technology and computing education.

### Learning Outcomes

Students completing this program will be able to:

- Write computer software.
- Develop computer applications to be used in a variety of areas.
- Develop websites, including web-based software and databases for use by experts in a broad range of fields.
- Grasp and demonstrate the subject matter of a specific field in which computers are to be used.
- Work effectively in groups to develop solutions to complex, field-specific problems.
- Communicate through writing about their technical activities.

### Major in Applied Computing Technology, Computing Education Concentration

This teacher education program leads to a Bachelor of Science degree in Applied Computing Technology with a concentration in Computing Education (K-12 technology education) with state licensure in instructional technology (computers) and provides students with...
a background in education, computer programming, and computer systems enabling graduates to teach computing principles and serve as computing technology experts in public schools.

Students interested in pursuing a teaching license through CSU may refer to the Center for Educator Preparation (CEP) (http://cep.chhs.colostate.edu) program and the College of Health and Human Sciences for general information.

### Potential Occupations

Graduates of this program can go on to become teachers in K-12 schools and will be capable of teaching a broad range of computing technology:

Major in Applied Computing Technology, Computing Technology Concentration

This concentration emphasizes the use of programming skills and computer applications and technology (e.g., web development, computer and network system administration) in a variety of computer application areas used in business and other organizations. This is essentially an Information Technology (IT) program, stressing the maintenance and use of computers and computer applications rather than developing large-scale software from scratch.

The Computing Technology Concentration includes all computer science classes taken by computer science majors in the first and second year, and combines those with specialized computing technology courses, business courses, and a selection of advanced courses from the Departments of Computer Science (http://www.cs.colostate.edu/cstop) and Computer Information Systems (http://biz.colostate.edu/cis/Pages/default.aspx).
### Potential Occupations

The Computing Technology Concentration prepares students for careers in information technology in which knowledge of computer programming, applications, and computing systems are used in businesses or other organizational settings. Computing technology students can be employed as computer programmers, web developers, network and system administrators, computing consultants, and business analysts.
