**Major in Business Administration, Organization and Innovation Management Concentration**

This program is designed to provide its students with a comprehensive knowledge of organization and innovation management along with the skills necessary for effective decision making in a business environment that is diverse, global, and highly competitive. Managers are dynamic individuals who are responsible for projects, teams, and processes. They coordinate, motivate, strategize, plan, budget, initiate action, evaluate performance, and control process and activities. They are commonly responsible for overseeing a budget and the activities of others to ensure that the organization’s goals and objectives are met. Managers are employed in every industry. It is essential that a manager learn and master key knowledge, skills, and abilities including how to handle conflict, communicate effectively, negotiate, create positive and productive work environments, and effectively manage the numerous issues associated with the human resources of an organization.

Students may choose focused course work in entrepreneurship, supply chain management, and human resource management. These are designed to help students acquire skill sets so that, upon graduation, they will be able to “hit the ground running.” In addition to the All-University Core Curriculum, course work for a concentration in organization and innovation management includes the College of Business Core and various management electives that allow the student to structure a program around his or her educational and/or career interests.

**Learning Outcomes**

Students will demonstrate:

- Knowledge and skills adequate to assume entry-level management positions in the broad spectrum of organizations so they can pursue careers in a wide variety of organizations and industries
- Ethical decision making skills
- An understanding of necessary change management and innovation skills
- An understanding of business principles and practices in an international context

**Potential Occupations**

Some examples include, but are not limited to the following: Account Manager, Analyst, Client Services, Consultant, Customer Service, Entrepreneur, Human Resources Manager, Logistics/Distribution Manager, Operations Manager, Project Manager, Recruiter, Retail Manager, Small Business Owner, Supply Manager, Trainer/Facilitator

**Requirements**

The College of Business requires a minimum grade point average of 2.000 in business and economics courses as a graduation requirement.

**Program Total Credits:** 120

1 Students enrolled in the Business Administration major prior to Fall semester 2013, are not required to take BUS 201 and BUS 220.

2 Students who have taken FIN 305 and/or MKT 305 prior to admission to the College of Business may substitute those courses to satisfy the category 4A and 4B requirements. All other students are required to take FIN 300 and MKT 300 to satisfy categories 4A and 4B.

3 Select enough elective credits to bring the program total to a minimum of 120 credits, of which at least 42 must be upper-division (300- to 400-level). A minimum of 6 elective credits must be upper-division.

Students are not to utilize the satisfactory/unsatisfactory (S/U) grading option for any Business concentration course or any Business core course (Business and non-Business subject codes) except when a course only allows S/U grading.

**Major Completion Map**

**Distinctive Requirements for Degree Program:**

**To Declare this Major:** Direct entry as a new freshman or transfer to the College of Business is highly selective and only those students meeting academic requirements will be accepted. For details contact the Office of Admissions.

CSU and the College of Business use holistic review when determining eligibility for admission to the College of Business as a new freshman. An example of a strong candidate for admission to the College of Business is one who is actively involved in their high school and community, has at least a 3.200 GPA with a 1200 or higher on the SAT or a 27 or higher on the ACT. For current admission criteria, contact the CSU Office of Admissions. New freshmen admitted to CSU but not directly to the College of Business will be admitted as "Undeclared Business Interest" and must meet the requirements below. To be eligible for admission to the College, CSU students (including Undeclared Business Interest) must have a 3.000 cumulative GPA on a minimum of 15 graded credits at Colorado State and a grade of B- or higher in ECON 202 and a grade of C- or higher in each course (total of 3 credits) from the following: MATH 117, MATH 118, MATH 124, MATH 125, MATH 126, MATH 141, or a higher level calculus course.

External transfer students who have completed a minimum of 15 graded credits with a 3.000 cumulative GPA and a grade of B- or higher in ECON 202 and a grade of C- or higher in each course (total of 3 credits) from the following: MATH 117, MATH 118, MATH 124, MATH 125, MATH 126, MATH 141, or a higher level calculus course. External transfer students who do not meet the above criteria will be admitted to Undeclared and must complete the requirements stated above.

**To Prepare for First Semester:** The Curriculum for the Business Administration-Organization and Innovation Management concentration assumes students will be able to successfully complete the College of Business Math requirement within the first year.

The College of Business requires a minimum grade point average of 2.000 in business and economics courses as a graduation requirement.

Second Concentration Major Completion Map

Distinctive Requirements for Degree Program:

To Declare this Major: Direct entry as a new freshman or transfer to the College of Business is highly selective and only those students meeting academic requirements will be accepted. For details contact the Office of Admissions.

CSU and the College of Business use holistic review when determining eligibility for admission to the College of Business as a new freshman. An example of a strong candidate for admission to the College of Business is one who is actively involved in their high school and community, has at least a 3.200 GPA with a 1200 or higher on the SAT or a 27 or higher on the ACT. For current admission criteria, contact the CSU Office of Admissions. New freshmen admitted to CSU but not directly to the College of Business will be admitted as “Undeclared Business Interest” and must meet the requirements below. To be eligible for admission to the College, CSU students (including Undeclared Business Interest) must have a 3.000 cumulative GPA on a minimum of 15 graded credits at Colorado State and a grade of B- or higher in ECON 202 and a grade of C- or higher in each course (total of 3 credits) from the following: MATH 117, MATH 118, MATH 124, MATH 125, MATH 126, MATH 141, or a higher level calculus course.

External transfer students who have completed a minimum of 15 graded credits with a 3.000 cumulative GPA and a grade of B- or higher in ECON 202 and a grade of C- or higher in each course (total of 3 credits) from the following: MATH 117, MATH 118, MATH 124, MATH 125, MATH 126, MATH 141, or a higher level calculus course. External transfer students who do not meet the above criteria will be admitted to Undeclared and must complete the requirements stated above.

To Prepare for First Semester: The Curriculum for the Business Administration-Supply Chain Management concentration assumes students will be able to successfully complete the College of Business Math requirement within the first year. The College of Business requires a minimum grade point average of 2.000 in business and economics courses as a graduation requirement.

Major in Business Administration, Marketing Concentration
This program will provide its students with a comprehensive knowledge of marketing along with the skills necessary for effective decision making in a business environment that is diverse, global, and highly competitive. As defined by the American Marketing Association, marketing is the activity, set of institutions, and processes for creating, communicating, delivering, and exchanging offerings that have value for customers, clients, partners, and society at large. Organizations engage in marketing activities, such as conducting market research, developing new products, establishing pricing approaches, designing marketing communications, and building customer relationships. • Identify a marketing problem and key influences on that problem, to use appropriate qualitative and quantitative analysis and market research techniques to evaluate the marketing problem, and to evaluate alternative solutions

• Make a final recommendation that thoroughly addresses the problem/opportunity based on: making reasonable assumptions; considering appropriate customer, competitor, and company constraints; clearly addressing the marketing issues; and demonstrating an understanding of the interrelationships of marketing concepts

• Use marketing terminology correctly

• Develop persuasive and convincing arguments that support recommendations

• Design a marketing plan

Potential Occupations
Between one-fourth and one-third of the civilian labor force is employed in marketing-related positions. Examples of possible careers include, but are not limited to:

marketing strategy planning, brand management, product development, market research, digital marketing, pricing management, sales management, advertising, and promotion management.

The mission of the Walter Scott, Jr. College of Engineering is to educate, innovate, cultivate and engage in order to generate new knowledge, improve quality of life and positively impact society.

Engineers are critically involved in every facet of modern technological society, processing information, designing systems and equipment, maintaining society’s infrastructure, solving environmental and energy problems, and helping attain desired levels of efficiency and comfort. The Walter Scott, Jr. College of Engineering continues its tradition—a tradition as old as CSU—of providing world-class training in the basic fields of engineering through both undergraduate instruction and graduate programs strongly supported by modern research facilities and distinguished faculty.

College Programs
The Engineering Accreditation Commission of ABET (http://www.abet.org) accredits all engineering undergraduate programs.

Undergraduate programs are administered by the Departments of Chemical and Biological Engineering, Civil and Environmental Engineering, Electrical and Computer Engineering, and Mechanical Engineering. These departments offer four-year programs leading to Bachelor of Science degrees. Although emphasis is on broad training in basic engineering, students may specialize to some extent by proper choice of technical electives. Additionally, the School of Biomedical Engineering offers a program in which students attain two degrees in five-years. Graduates of this program receive two degrees: one B.S. in biomedical engineering and the other B.S. in one of three traditional engineering areas: Chemical and Biological Engineering, Electrical Engineering, or Mechanical Engineering.

Students may consider simultaneously completing the requirements for a second major. See Second Major Requirements for a complete description of the program. A student may pursue a minor program of study inside or outside the Walter Scott, Jr. College of Engineering in conjunction with the desired engineering major.

Walter Scott, Jr. College of Engineering General Objectives and Outcomes

Outcomes
Graduates of the undergraduate engineering programs will be able to:

1. An ability to identify, formulate, and solve complex engineering problems by applying principles of engineering, science, and mathematics
2. An ability to apply engineering design to produce solutions that meet specified needs with consideration of public health, safety, and welfare, as well as global, cultural, social, environmental, and economic factors
3. An ability to communicate effectively with a range of audiences
4. An ability to recognize ethical and professional responsibilities in engineering situations and make informed judgments, which must consider the impact of engineering solutions in global, economic, environmental, and societal contexts
5. An ability to function effectively on a team whose members together provide leadership, create a collaborative and inclusive environment, establish goals, plan tasks, and meet objectives
6. An ability to develop and conduct appropriate experimentation, analyze and interpret data, and use engineering judgment to draw conclusions
7. An ability to acquire and apply new knowledge as needed, using appropriate learning strategies

Objectives
Individual program outcomes and objectives are provided within the respective departments’ websites and below, in this catalog.

Cooperative Education Program
The cooperative education program is an academic rotational program in which students work at least three semesters, two of which are fall or spring, in an assignment related to their major. Each work semester, cooperative education students register for one credit hour of Engineering Cooperative Experience to maintain their full-time student status. Three cooperative education credit hours may be substituted for a technical elective in their major. Cooperative education students gain at least a year of work experience, typically with the same employer, while earning a competitive salary. The cooperative education program allows participants to explore their chosen engineering discipline, build a powerful resume, develop a network of professional contacts, and support their academic expenses.

International Opportunities
Education abroad programs are available to students in the Walter Scott, Jr. College of Engineering. Because knowledge of other cultures is valuable in understanding our own, students are strongly encouraged to
Transfer Students
Advisors in each department are available to assist students who wish to transfer. Should the demand for any engineering major exceed the capacity to maintain a high-quality education, individual departments may find it necessary to enforce more stringent requirements.

Transfer of credits earned at other colleges and universities within Colorado is facilitated by the articulation agreements from one university to another on course equivalencies.

Change of Major to Engineering
Students who wish to change from another CSU major are selected for admission once at the end of each term; students are admitted based on academic criteria. Some majors may specify more stringent requirements in math and science or other courses. Engineering courses are normally open to engineering majors only.

Curricular Requirements
The curricula of the Walter Scott, Jr. College of Engineering include courses in engineering, mathematics, science, humanities, and social sciences. During the first two years, all engineering students take coursework emphasizing mathematics, physics, chemistry, and basic engineering; because all branches of engineering rely on this foundation. The junior and senior years are devoted primarily to a balanced selection of specialized engineering courses. The minimum number of credits for graduation with a Bachelor of Science degree varies by engineering major.

Good engineers are not only competent to render professional service in their fields of specialization, but are able to assume leadership roles as citizens. To broaden students’ perspectives in non-technical areas, the programs in engineering require a minimum of 12 to 15 credits in arts and humanities and behavioral and social sciences to be selected from anthropology, economics, foreign languages, history, literature, philosophy, political science, psychology, and sociology. Courses in art, geography, music, speech, and theater may also be selected with the prior approval of the advisor. These courses must be selected in such a way that they also meet All-University Core Curriculum requirements.

The ability to express oneself clearly and concisely in both written and oral forms is a great asset to the engineer who is often called upon to prepare reports in which clarity, organization, and precision are essential. For this reason, engineering students must do more than meet the minimum English course requirements. In fact, the development of communication skills is emphasized throughout the engineering curricula. This emphasis is especially evident in laboratory and design-oriented courses, in which the presentation of both oral and written reports is a major component.

The Walter Scott, Jr. College of Engineering requires a minimum grade point average of 2.000 in required engineering, mathematics, chemistry, and physics courses as a graduation requirement. Additional minimum grade requirements apply in some engineering majors.

An engineer applies physical understanding and analytical techniques to the design of devices and systems needed by modern society. The preparation of an engineer, therefore, must include engineering design experience. To meet this objective, all undergraduate engineering students must participate in a well-structured sequence of design-related courses culminating in a capstone design experience in order to graduate.
Graduate Programs in Biomedical Engineering

Programs leading to a Master of Engineering, Master of Science, and Doctor of Philosophy degrees are offered at CSU. The graduate programs in Bioengineering (M.S. and Ph.D.) integrate physical, chemical, and mathematical sciences with engineering principles and clinical studies. There are boundless opportunities for research, ranging from new therapies and imaging modalities for fighting cancer, to improving the design of vital medical equipment used in open heart surgery, or developing the next generation of gene therapies and engineered tissues. CSU is uniquely positioned to offer this advanced degree program. The highly-ranked Veterinary Medical Center and the Professional Veterinary Medicine Program are co-located with engineering and sciences on the CSU campus, providing a rich environment for interdisciplinary research and day-to-day collaborations.

Other Graduate Programs under the Walter Scott, Jr. College of Engineering

The Walter Scott, Jr. College of Engineering also offers an M.S. and a Ph.D. in Systems Engineering, as well as graduate-level interdisciplinary studies programs in Extreme Ultraviolet and Optical Science and Technology, and Systems Engineering. Students interested in graduate work should refer to the Graduate and Professional Bulletin.

Undergraduate

No undergraduate major is offered. Undergraduates interested in atmospheric science at the graduate level are encouraged to major in engineering, physics, chemistry, mathematics, or atmospheric science.

Graduate

The department offers a Master of Science and a Doctor of Philosophy in Atmospheric Science.

M.S. Program

Students that complete the M.S. program will acquire the knowledge and proficiency needed to seek employment in the field of atmospheric science. Knowledge and proficiency are gained through completion of a required core curriculum, elective graduate courses chosen from a wide selection of offerings, and by participation in scientific research with their advisors.

M.S. graduates are prepared for a wide choice of professionally satisfying work in the private sector, consulting, and with many government agencies. Graduates of the M.S. program can also choose to continue their studies and research in the Ph.D. program. A student is eligible to seek admission to the Ph.D. program after successfully completing a thesis-based M.S. degree with a positive recommendation from their M.S. committee. Students holding thesis-based M.S. degrees from institutions other than CSU may be directly admitted into the Ph.D. program. These students follow the normal application procedures to our program.

In addition to meeting the formal credit requirements for the M.S., described below, all graduate students enrolled in the department are expected to attend the weekly department colloquium series. These colloquia are an important part of the total instructional program. Details can be found on the colloquium page (http://www.atmos.colostate.edu/colloquia/) on the ATS website.

Prerequisites

- Bachelor of Science (B.S.) degree in physics, math, atmospheric science, engineering, chemistry, or related field with a cumulative GPA of at least 3.0
- Calculus-based math course sequence including differential equations and vector analysis
- Calculus-based physics course sequence including kinetics, electricity and magnetism, and some modern topics

Plan A (Thesis)

A minimum of 30 semester credits plus thesis is required. At least 19 credits must be earned in structured academic courses. 11 credits may be in special studies, graduate seminars, and research. Of the total 30 credits, 20 must have the ATS subject code.

All M.S. students must complete the following required courses (required courses account for 13 credit hours):
- ATS 601 Atmospheric Dynamics I (2 credits)
- ATS 606 Introduction to Climate (2 credits)
- ATS 620 Thermodynamics and Cloud Physics (2 credits)
- ATS 621 Atmospheric Chemistry (2 credits)
- ATS 622 Atmospheric Radiation (2 credits)
- ATS 693 Responsible Research in Atmospheric Science (1 credit)
- One of the following:
  - ATS 640 Introduction to Synoptic Dynamics (2 credits)
  - ATS 641 Introduction to Mesoscale Dynamics (2 credits)

All MS students must also complete 6 elective credit hours in structured classes. Electives may include any structured class at the 500/600 level. With written advisor approval, electives may also include structured 700 level classes and/or structured graduate courses in other departments. Audited classes do not count towards the M.S. degree.

A student may substitute an alternate course for a required class if:

1. A course similar to the required class has already been completed at the graduate level with a grade of B or higher
2. The student’s advisor, the department head, and the instructor of the required course approve the substitution in writing

A student’s program of study, and any deviations therein from department degree requirements, requires department head approval.

ATS 784 does not count toward the 19 structured credits. ATS 699A-O and ATS 784 are graded as S/U.

Ph.D. Program

The department offers a Ph.D. program for students who want to obtain the highest academic degree available in the field of atmospheric science. Students who earn a Ph.D. must demonstrate significant intellectual achievement, high scholarly ability, and a great breadth of knowledge.

In addition to meeting the formal credit requirements for the Ph.D., described below, all graduate students enrolled in the department are expected to attend the weekly department colloquium series. These colloquia are an important part of the total instructional program. Details can be found on the colloquium page (http://www.atmos.colostate.edu/colloquia/) on the ATS website.

Prerequisites

- Successful completion of an M.S. degree with thesis in atmospheric science, physics, math, engineering, chemistry, or related field
- Demonstration of aptitude for research

Course Requirements

- Ph.D. students must take a minimum of 42 semester credits beyond the (thesis option) master's degree (or 72 semester credits beyond the bachelor's degree). At least 21 credits beyond the master’s degree (or 37 credits beyond the bachelor’s degree) must be earned in courses numbered 500 or above.
- Ph.D. students are required to take two structured courses per academic year. Students must register for the courses, and only one may be taken as an audit. The structured courses can be selected from the 500, 600, or 700 level. With written advisor approval, the courses may also include structured graduate classes from other departments. When the student is within one semester of graduation, the student and advisor may petition the Department Head, in writing, for a waiver of the "two courses per year" requirement. While ATS 784 (Supervised College Teaching) is not considered a structured academic course, it is allowed to count towards the two courses per academic year Ph.D. requirement.
• Successful completion of ATS 693 (1 cr), Responsible Conduct of Research, offered every spring semester.
• Audits count towards the department’s requirement that all GRAs enroll for at least 15 credit hours each semester (section L). However, audits do not count towards the total required course credits for the Ph.D. and may not be listed on the GS Form 6.

Evaluation Mechanisms
• Successful completion of the department preliminary exam that includes background, methods, and current research that applies to the specific area(s) encompassing the candidate’s proposed research topic
• Successful research topic proposal presentation
• Dissertation prepared under the mentorship of the student’s advisor and graduate committee that meets the following criteria: displays original and creative scholarship, contributes new knowledge to the field of atmospheric science, and expresses good literate style.
• Successful defense of a dissertation before the student’s graduate committee and any other members of the academic and scientific communities who desire to attend

The student’s Graduate Committee is charged with ensuring the student gains breadth in Atmospheric Science during their tenure in the program. Accordingly, the Graduate Committee may make recommendations on coursework to be completed prior to graduation.

Major in Chemical and Biological Engineering

Chemical and biological engineering is a powerful blend of basic sciences and the skills to quantitatively describe, predict, and control all changes of matter. This provides the foundation to create cutting-edge materials and products, to design new devices to improve health or the environment, and to design processes for the safe production of chemicals and biochemicals, the production of alternative energy sources, and prevention of hazardous waste.

The Chemical and Biological Engineering curriculum is based on the sciences of physics, chemistry, biology, and mathematics. It includes engineering science and design methods, as well as humanities and social sciences. Students can pursue interdisciplinary studies programs or minors. Popular options include minors in chemistry, mathematics, environmental engineering, and biomedical engineering. The curriculum is well-aligned to meet pre-health profession requirements. The Chemical and Biological Engineering program provides an environment that promotes a sense of professionalism, the development of project management skills, and an appreciation for the value of life-long learning. Graduates of our program are well prepared to enter a variety of professions, or to pursue further education. The broad, strong scientific basis of chemical and biological engineering has kept our graduates consistently near or at the top in salary and demand among B.S. graduates.

The Chemical and Biological Engineering major is accredited by the Engineering Accreditation Commission of ABET (http://abet.org).

Program Educational Objectives

The Chemical and Biological Engineering program at CSU will empower graduates with the educational foundation to:

• Be highly successful, as defined by accomplishments, advanced certifications, and job satisfaction, in chemical and biological engineering practice, post-graduate education, or other careers making use of engineering knowledge.
• Be identified for both their mastery of fundamental chemical and biological engineering principles and their creative application of those principles to the solution of problems across a diverse range of career disciplines.
• Be recognized as critical, creative and independent thinkers who use their technical expertise and leadership to address the needs of society and advance their fields of expertise.
• Be recognized for their effectiveness in teamwork, communication, and service to society through their professional contributions.
• Hold paramount health and safety of the public and the environment.
• Demonstrate the highest standards of professional, ethical, and civic responsibility in all endeavors.
• Demonstrate continued professional growth through a commitment to lifelong learning.

Student Outcomes

Graduates of the undergraduate Chemical and Biological Engineering programs will have:

• an ability to identify, formulate, and solve complex engineering problems by applying principles of engineering, science, and mathematics
• an ability to apply engineering design to produce solutions that meet specified needs with consideration of public health, safety, and welfare, as well as global, cultural, social, environmental, and economic factors
• an ability to communicate effectively with a range of audiences
an ability to recognize ethical and professional responsibilities in engineering situations and make informed judgments, which must consider the impact of engineering solutions in global, economic, environmental, and societal contexts
• an ability to function effectively on a team whose members together provide leadership, create a collaborative and inclusive environment, establish goals, plan tasks, and meet objectives
• an ability to develop and conduct appropriate experimentation, analyze and interpret data, and use engineering judgment to draw conclusions
• an ability to acquire and apply new knowledge as needed, using appropriate learning strategies.

Potential Occupations
Chemical and Biological Engineering graduates find employment in the biotechnology, biomedical, microelectronics, environmental, consulting, alternative energy, petroleum, chemical, food, pharmaceutical and other private sector industries and with government agencies. Participation in undergraduate research, internships, volunteer activities, or cooperative education opportunities is highly recommended to enhance practical training and development. Graduates who go on for advanced studies can attain more responsible positions with the possibility of rising to top professional levels. In addition to pursuing M.S. and Ph.D. degrees in chemical and biological engineering and related fields, some of our graduates have obtained M.D., D.V.M., law, and M.B.A. degrees.

Graduate Programs in Civil and Environmental Engineering

In Civil Engineering, programs leading to the Master of Science (M.S.), Master of Engineering (M.E.), and Doctor of Philosophy (Ph.D.) degrees are offered. Focus areas include construction engineering and management (Ph.D. only), environmental engineering, geotechnical engineering, groundwater engineering, hydraulic engineering/stream restoration and river mechanics, hydrologic science and engineering, irrigation and drainage engineering, structural engineering and structural mechanics, water and international development, water resources planning and management, and fluid mechanics/dynamics.

A practice-oriented, course-work only, Master of Engineering (M.E.) degree program is available to students with a baccalaureate degree in engineering. Graduates of some science programs also are eligible for the M.E., but typically are required to complete background engineering courses at the undergraduate level in addition to the required courses for their graduate degree. Master of Engineering tracks are offered in environmental engineering, geotechnical engineering, infrastructure engineering, irrigation engineering, structural engineering, and water resources engineering.

Students interested in graduate work should refer to the Graduate and Professional Bulletin or the Civil Engineering Department (https://www.engr.colostate.edu/ce/).

Major in Civil Engineering

The undergraduate Civil Engineering program provides a solid base in the physical sciences, mathematics, engineering fundamentals, and
design and management concepts. The All-University Core Curriculum provides a broad background in communication, liberal arts, humanities, and social sciences. In addition to offering courses in the various sub-disciplines of Civil Engineering, the Civil Engineering curriculum covers design practices, information technology, technical communications, project management, and engineering ethics. The program culminates in a year-long, term-based, senior capstone design experience. Preparation for high-level professional practice is emphasized. The Fundamentals of Engineering (FE) exam is the first step toward registration as a Professional Engineer (PE), an important professional credential for civil engineers. Thus, students in this major are strongly encouraged to take the FE exam prior to graduation. Graduates of our Civil Engineering major consistently have a passing rate on the FE exam that is significantly above the national average.

Participation in internships, volunteer activities, professional organizations, and cooperative education opportunities is highly recommended to enhance practical training and development. Graduates who pursue advanced studies are prepared for higher level technical responsibilities.

The educational outcomes and objectives of this major can be found on the Department of Civil and Environmental Engineering website (https://www.engr.colostate.edu/ce/). The Civil Engineering major is accredited by the Engineering Accreditation Commission of ABET (http://abet.org).

**Potential Occupations**

The current national focus on the need to replace and upgrade the nation’s infrastructure means that employment opportunities for students who obtain a Bachelor of Science in Civil Engineering from CSU should be plentiful in the foreseeable future.

Civil engineers are employed in many different organizations, including small and large consulting firms, local, state, and federal governmental agencies, and industrial companies such as construction, petroleum, and aerospace firms. Civil engineers also may find opportunities in specialized design, research, and teaching.

Some example job titles for graduates with a Bachelor of Science degree in Civil Engineering (BSCE) include, but are not limited to, civil engineer, transportation engineer, hydraulic engineer, water resources engineer, structural engineer, geotechnical engineer, geoenvironmental engineer, groundwater engineer, hydrologist, wind engineer, urban/regional planner, infrastructure engineer or manager, contract administrator, construction engineer or manager, building construction inspector, facilities engineer or manager, industrial transportation specialist, industrial designer/engineer, construction materials engineer, irrigation engineer, mining engineer, mining and petroleum research engineer, technical sales engineer, and educator.

**Major in Environmental Engineering**

Environmental engineers design solutions that prevent future pollution as well as correct existing pollution problems. The undergraduate curriculum in Environmental Engineering is based on a strong foundation in physical, chemical, and biological sciences, mathematics, and engineering fundamentals. The All-University Core Curriculum provides a broad background in communication, liberal arts, humanities, and social sciences. Upper-division courses address engineering applications for prevention and control of air, water, and land pollution. Required courses that are specific to the Environmental Engineering major come from several engineering and science disciplines, including organic and environmental chemistry, microbiology, hydrology, statistics, environmental toxicology, and water treatment. Technical electives provide specialization in a particular area of interest. Seniors complete the same year-long, capstone design experience as Civil Engineering majors, working in teams on real-world engineering problems.

Participation in student professional societies, other campus organizations, internships, and volunteer activities is highly recommended to foster personal growth and professional development. The Fundamentals of Engineering (FE) exam is the first step toward registration as a Professional Engineer, an important professional credential for environmental engineers. Therefore, students are strongly encouraged to take the FE exam prior to graduation. Students who obtain a Bachelor of Science in Environmental Engineering from CSU are well prepared for entry-level positions with regulatory agencies, engineering consulting firms, and environmental divisions of large corporations, particularly in the energy and manufacturing industries. Some example job titles for graduates include, but are not limited to, hydraulic engineer, water resources engineer, environmental engineer, geoenvironmental engineer, reclamation engineer, stormwater engineer, floodplain manager, groundwater engineer, hydrologist, urban/regional planner, water infrastructure engineer or manager, contract administrator, facilities engineer or manager, irrigation engineer, ecological engineer, and educator. Graduate study in a specific area of interest is highly recommended to enhance the ability to undertake more advanced technical responsibilities upon graduation.

**Potential Occupations**

The expansion of our population and economy, along with increased public concern and regulation of environmental quality, will contribute to the increased demand for the services of environmental engineers, both in the U.S. and abroad. Environmental engineers typically are employed in designing pollution prevention equipment and systems, designing environmental monitoring systems, implementing both government and industry environmental regulations, designing water and wastewater treatment systems, and restoring ecosystem health.

### Major Completion Map

#### Distinctive Requirements for Degree Program:

**TO DECLARE MAJOR:** Engineering is a controlled major: students are admitted into the major only if they meet established academic standards. Please see competitive major requirements or the advisor in the Department for more information.

**TO PREPARE FOR FIRST SEMESTER:** The curriculum for this major assumes students enter college prepared to take calculus. To qualify for graduation, engineering science majors must achieve a minimum 2.000 grade point average at CSU in all courses in engineering, mathematics, computer science, statistics, physics, and chemistry as well as courses taken as technical electives.

Major in Computer Engineering
From self-driving cars to smart cities, we live in a hyper-connected world. As the smart thinkers behind today’s smart devices and systems, computer engineers hold the key to understanding, advancing, and protecting the security of next generation technologies.

A degree in Computer Engineering from CSU will help students make an impact beyond their computer screen. Affording a big picture view of how technology works, computer engineers look at the interplay between hardware and software to create solutions that benefit society. The degree combines many aspects of electrical engineering and computer science, arming students with knowledge to push the capabilities and applicability of next generation electronics and computing. Have an interest in robotics, artificial intelligence, machine learning, neural networks, or data science? With computer engineering at the heart of these disciplines, our professors will prepare students to drive innovation in virtually any field.

Computer Engineering students will experience the benefits of a smaller department with top-tier faculty, while enjoying the perks of a large university. Electrical and Computer Engineering (ECE) courses and research areas span a range of disciplines that include:

• Biomedical Engineering
• Communications and Signal Processing
• Computer Engineering
• Controls and Robotics
• Electromagnetics and Remote Sensing
• Lasers and Photonics

Career Opportunities
A field of endless possibilities, career paths for computer engineers are largely dependent on personal interests. Computer Engineering alumni hold positions such as software engineer for a tech giant, designer for a start-up company, and program manager for NASA. In addition to being one of the most lucrative college majors, Computer Engineering currently ranks among the top 10 majors in demand for bachelor’s, master’s, and doctoral degrees according to the National Association of Colleges and Employers. Almost every industry recruits Computer Engineering graduates, including aerospace, biomedical and healthcare, clean energy, robotics, climate science, manufacturing, agriculture, and transportation.

Program Objectives and Outcomes
The Computer Engineering program educational objectives are designed and implemented around the following three principal attributes: mastery, innovation, and leadership.

Graduates of the Computer Engineering program will be able to:

1. Apply engineering design to produce solutions that meet specified needs with consideration of public health, safety, and welfare, as well as global, cultural, social, environmental, and economic factors
   Communicate effectively with a range of audiences

2. Recognize ethical and professional responsibilities in engineering situations and make informed judgments, which must consider the impact of engineering solutions in global, economic, environmental, and societal contexts

3. Function effectively on a team whose members together provide leadership, create a collaborative and inclusive environment, establish goals, plan tasks, and meet objectives

4. Develop and conduct appropriate experimentation, analyze and interpret data, and use engineering judgment to draw conclusions

5. Acquire and apply new knowledge as needed, using appropriate learning strategies

Requirements
Effective Spring 2022
In order to maintain professional standards required of practicing engineers, the Department of Electrical and Computer Engineering requires a cumulative grade point average of at least 2.000 in Electrical Engineering courses as a graduation requirement. It is the responsibility of any student who fails to maintain a 2.000 average to work with their advisor to correct grade point deficiencies. In addition, it is required that
students retake any Electrical Engineering course at the 300-level or below in which they receive a grade below C (2.000).

**Distinctive Requirements for Degree Program:**

**TO PREPARE FOR FIRST SEMESTER:** The curriculum for this major assumes students enter college prepared to take calculus.

The ECE curriculum has been modified as part of the Revolutionizing Engineering Departments initiative (RED). Three threads run through the new curriculum: Foundations, Creativity and Professional Formation of Engineers. This new curriculum incorporates skills that engineers need beyond technical expertise, in areas like communication, ethics, social impact and interaction in large, diverse groups. The ECE department requires that students also complete the following three Career Development Seminars: 1) Resume Writing; 2) Behavior Based Interviewing; and 3) Using LinkedIn™.

In order to maintain professional standards required of practicing engineers, the Department of Electrical and Computer Engineering requires a cumulative grade point average of at least 2.000 in Electrical Engineering courses as a graduation requirement. It is the responsibility of any student who fails to maintain a 2.000 average to work with their advisor to correct grade point deficiencies. In addition, it is required that students retake any Electrical Engineering course at the 300-level or below in which they receive a grade below C (2.000).

**Major in Electrical Engineering**

You may think that electrical engineering is magic - and it kind of is. Electrical engineering is filled with daring visionaries and bright minds who engage, imagine, and invent. We are the masters of power and energy and light and systems that can turn science fiction into living, breathing science. We are the force that connects people and technologies with elegant devices that fit in the palm of your hand and colossal systems that are beyond imagination. We are the spark, the energy, and the catalyst - the generators of ideas, champions of possibility, and the fuel for change to help shape a better world for all. Is that magic? Almost. And we'd love to show you how it works.

Students choose between two concentrations. The Electrical Engineering concentration covers a broad range of electrical engineering subdisciplines and allows a student to focus on their particular area of
interest using technical electives. The Lasers and Optical Engineering concentration focuses on optics and waves, optical electronics, optical information processing, and communications.

Concentrations

- Electrical Engineering Concentration
- Lasers and Optical Engineering Concentration

**Major in Electrical Engineering, Electrical Engineering Concentration**

Electrical engineering is a broad discipline that is essential to our everyday lives. Our professors will teach students to think like an engineer to drive what’s next in technology and create a better world for all, from advanced medical devices to self-driving cars to smart homes.

Our students are imaginative and inventive, and love the thrill of problem-solving. Whether working on a senior design project that satisfies real customer requirements to participating in a day-long hacker competition, students will have the opportunity to turn their bold ideas into original projects at every level of our program.

Electrical Engineering students will experience the benefits of a smaller department with top-tier faculty, while enjoying the perks of a large university. Electrical and Computer Engineering (ECE) courses and research areas span a range of disciplines that include:

- Biomedical Engineering
- Communications and Signal Processing
- Computer Engineering
- Controls and Robotics
- Electromagnetics and Remote Sensing
- Lasers and Photonics

**Program Objectives and Outcomes**

The ECE program educational objectives are designed and implemented around the following three principal attributes: mastery, innovation, and leadership.

Graduates of the Electrical Engineering program will be able to:

1. Identify, formulate, and solve complex engineering problems by applying principles of engineering, science, and mathematics
2. Apply engineering design to produce solutions that meet specified needs with consideration of public health, safety, and welfare, as well as global, cultural, social, environmental, and economic factors
3. Communicate effectively with a range of audiences
4. Recognize ethical and professional responsibilities in engineering situations and make informed judgments, which must consider the impact of engineering solutions in global, economic, environmental, and societal contexts
5. Function effectively on a team whose members together provide leadership, create a collaborative and inclusive environment, establish goals, plan tasks, and meet objectives
6. Develop and conduct appropriate experimentation, analyze and interpret data, and use engineering judgment to draw conclusions
7. Acquire and apply new knowledge as needed, using appropriate learning strategies

**Requirements**

**Effective Fall 2021**

In order to maintain professional standards required of practicing engineers, the Department of Electrical and Computer Engineering requires a cumulative grade point average of at least 2.000 in ECE courses as a graduation requirement. It is the responsibility of any student who fails to maintain a 2.000 average to work with their advisor to correct grade point deficiencies. In addition, it is required that students retake any Electrical Engineering course at the 300-level or below in which they receive a grade below a C (2.000).

1. Free elective credits can be satisfied by completing courses 100-level or above. Students use up to 3 credits of free electives to reach the required total of 129 program credits.
2. Students are required to complete three Career Development Seminars: 1) Resume Writing; 2) Behavior Based Interviewing; and 3) Using LinkedIn™. Completion of the required workshops may be spread over the student’s four-year program.
3. A total of 6 credits of Independent Study may apply toward degree requirements. This includes credit for ECE 395A, ECE 395B, ECE 395C and ECE 495A, ECE 495B, and ECE 495C combined.
4. CS 152, MATH 151 and STAT 158 count as Science/Math/Engineering electives ONLY when CS 163 or CS 164 is also taken. CS 163 or CS 164 will be applied toward the freshman year requirement.

### Distinctive Requirements for Degree Program:

#### TO PREPARE FOR FIRST SEMESTER:

The curriculum for this major assumes students enter college prepared to take calculus.

The ECE department requires that students complete the following three Career Development Seminars: 1) Resume Writing; 2) Behavior Based Interviewing; and 3) Using LinkedIn™.

In order to maintain professional standards required of practicing engineers, the Department of Electrical and Computer Engineering requires a cumulative grade point average of at least 2.000 in electrical engineering courses as a graduation requirement. It is the responsibility of any student who fails to maintain a 2.000 average to work with their advisor to correct grade point deficiencies. In addition, it is required that students retake any electrical engineering course at the 300-level or below in which they receive a grade below C (2.000).

Major in Electrical Engineering, Lasers and Optical Engineering Concentration

From cancer detection to faster computing, lasers and optics improve today's world. Electrical engineering students are prepared for success in today's high-tech world through stimulating coursework and unique hands-on projects. They will learn a new way of thinking that teaches the importance of creativity and innovation in solving complex societal problems.

Lasers and Optics students will experience the benefits of a smaller department with top-tier faculty, while enjoying the perks of a large university. Electrical and computer engineering (ECE) courses and research span a range of disciplines that include:

- Biomedical Engineering
- Communications and Signal Processing
- Computer Engineering
- Controls and Robotics
- Electromagnetics and Remote Sensing
- Lasers and Photonics

Career Opportunities

A field of endless possibilities, electrical engineering career paths are largely dependent on personal interests. Electrical engineering alumni hold positions ranging from a designer at a start-up company to a research scientist for the U.S. Naval Research Laboratory. In addition to being one of the most lucrative college majors, for the past decade electrical engineering has ranked among the top 10 majors in demand for bachelor's, master's, and doctoral degrees, according to the National Association of Colleges and Employers. Almost every industry recruits electrical engineering graduates, such as aerospace, biomedical, energy, robotics, manufacturing, and automotive.

Program Objectives and Outcomes

The ECE program educational objectives are designed and implemented around the following three principal attributes: mastery, innovation, and leadership.

Graduates of the ECE program will be able to:

1. Identify, formulate, and solve complex engineering problems by applying principles of engineering, science, and mathematics
2. Apply engineering design to produce solutions that meet specified needs with consideration of public health, safety, and welfare, as well as global, cultural, social, environmental, and economic factors
3. Communicate effectively with a range of audiences
4. Recognize ethical and professional responsibilities in engineering situations and make informed judgments, which must consider the impact of engineering solutions in global, economic, environmental, and societal contexts
5. Function effectively on a team whose members together provide leadership, create a collaborative and inclusive environment, establish goals, plan tasks, and meet objectives
6. Develop and conduct appropriate experimentation, analyze and interpret data, and use engineering judgment to draw conclusions
7. Acquire and apply new knowledge as needed, using appropriate learning strategies

Requirements
Effective Fall 2021
In order to maintain professional standards required of practicing engineers, the Department of Electrical and Computer Engineering requires a cumulative grade point average of at least 2.000 in Electrical Engineering courses as a graduation requirement. It is the responsibility of any student who fails to maintain a 2.000 average to work with their advisor to correct grade point deficiencies. In addition, it is required that students retake any Electrical Engineering course at the 300 level or below in which they receive a grade below a C (2.000).

1. Students are required to complete three Career Development Seminars: 1) Resume Writing; 2) Behavior Based Interviewing; and 3) Using LinkedIn™. Completion of the required workshops may be spread over the student's four-year program.

2. Project must be a laser and optical engineering topic.

3. CS 152, MATH 151 and STAT 158 count as Science/Math/Engineering electives ONLY when CS 163 or CS 164 is also taken. CS 163 or CS 164 will be applied to the freshman year requirement.

4. A total 3 credits of Independent Study may apply toward the total degree requirements. This includes credit awarded for ECE 395A, ECE 395B, ECE 395C and ECE 495A, ECE 495B, ECE 495C combined.

Major Completion Map

TO PREPARE FOR FIRST SEMESTER: The curriculum for this major assumes students enter college prepared to take calculus.

The ECE department requires that students complete the following three Career Development Seminars: 1) Resume Writing; 2) Behavior Based Interviewing; and 3) Using LinkedIn™.

In order to maintain professional standards required of practicing engineers, the Department of Electrical and Computer Engineering requires a cumulative grade point average of at least 2.000 in electrical engineering courses as a graduation requirement. It is the responsibility of any student who fails to maintain a 2.000 average to work with their advisor to correct grade point deficiencies. In addition, it is required that students retake any electrical engineering course at the 300-level or below in which they receive a grade below C (2.000).

*This certificate may have courses in common with other graduate certificates. A student may earn more than one certificate, but a given course may be counted only in one certificate.

Graduate Certificate in Data Engineering

The certificate program provides education on both Theoretical Foundation (TF) of Data Engineering and Applications (AP) of Data Engineering in specific engineering domains. The certificate requires completing 12 credits of coursework. At least 6 credits must be taken from courses listed under the Theoretical Foundation (TF) category. These courses provide training on the central theory and methods of Data Engineering, informed by physical and dynamical models that generally arise in engineering processes. At least 3 credits must be taken from courses listed under the Applications (AP) category. These courses provide training on applications of Data Engineering methods in specific engineering domains, by tailoring and applying data analysis to specific data acquisition techniques and models that are suitable for a particular engineering domain. The domains currently include Signal and Image Processing, Biomedical Engineering, Computer Engineering, and Systems Engineering. Lists of approved TF courses and AP courses are provided under “Program Requirements”.

Major in Mechanical Engineering

Is making a difference important to you? Would you enjoy the challenge of inventing sustainable energy devices, leading computer-aided product design, or biomedical research? Does creating new designs for the hybrid electric vehicle industry, or new airplanes in the fields of aeronautics and aerospace sound interesting? Would designing or doing research and development in a wide range of industrial and governmental enterprises appeal to you? Does studying thermal sciences and the integration of electronic and mechanical devices interest you? Do you like putting ideas and designs to work? Are you interested in collaborating and working in teams with others? If your answer to any of these questions is “yes,” then a major in Mechanical Engineering may be for you.
Mechanical engineers are creative problem solvers who design, develop, and manufacture the machines and instrumentation that run energy, building, environmental, and transportation systems. Examples include biomedical devices, ground/air/space vehicles, robots, environmental control equipment, and power plants.

In Mechanical Engineering, students take basic science and mathematics courses while beginning their engineering studies in design and computing. A broad spectrum of classes is designed to sharpen problem-solving skills. The senior year focuses on a year-long capstone design course to help students in the transition from college to an engineering career. Students also choose technical electives from the energy, automotive, material science, manufacturing, dynamic systems, robotics and controls, simulation and modeling, and biomedical engineering areas. Participation in labs provides an active learning environment and further develops design, modeling, and analytical skills.

Mechanical Engineering at CSU is dedicated to graduating ethical mechanical engineers who:

- Make an impact on society's global, grand engineering challenges
- Act as innovative and creative engineering designers who identify, analyze, and solve complex problems
- Function as accomplished thinkers with hands-on practical skills
- Serve as local, regional, and global collaborators and communicators
- Commit to life-long learning
- Uphold the CSU Principles of Community which encompass inclusion, integrity, respect, service, and social justice

Program Educational Objectives

Mechanical Engineering Bachelor of Science graduates will be able to accomplish the following within the first few years after graduation:

- Identify, analyze, formulate, and solve engineering problems associated with their professional position, both independently and in a team environment
- Manage multi-faceted and multi-disciplinary projects with significant legal, ethical, regulatory, social, environmental, and economic considerations using a broad systems perspective
- Communicate effectively with colleagues, professional clients, and the public
- Demonstrate commitment and progress in lifelong learning, professional development, and leadership

Student Outcomes

Graduates of the undergraduate Mechanical Engineering program will be prepared to:

- Identify, formulate, and solve complex engineering problems by applying principles of engineering, science, and mathematics
- Apply engineering design to produce solutions that meet specified needs with consideration of public health, safety, and welfare, as well as global, cultural, social, environmental, and economic factors
- Communicate effectively with a range of audiences
- Recognize ethical and professional responsibilities in engineering situations and make informed judgments, which must consider the impact of engineering solutions in global, economic, environmental, and societal contexts
- Function effectively on a team whose members together provide leadership, create a collaborative and inclusive environment, establish goals, plan tasks, and meet objectives
- Develop and conduct appropriate experimentation, analyze and interpret data, and use engineering judgment to draw conclusions
- Acquire and apply new knowledge as needed, using appropriate learning strategies

Potential Occupations

Graduates from the Department of Mechanical Engineering are expected to have the fundamental knowledge required for the successful practice of mechanical engineering. CSU engineering graduates are well prepared for a professional career. The Department boasts a 100% pass rate on the Fundamentals of Engineering professional examination. Participating in internships, co-curricular and volunteer activities, and cooperative education opportunities is highly recommended to enhance practical training and development. Students who continue on to pursue a graduate education can attain more responsible positions with the possibility of rising to top professional levels.

School of Biomedical Engineering

Scott Bioengineering Building, Suite 225
engr.colostate.edu/sbme (http://www.engr.colostate.edu/sbme/)
(970) 491-7157

Professor Stuart Tobet, Director
Professor Kevin Lear, Associate Director; and Director, Undergraduate Programs
Associate Professor Ketul Popat, Interim Director, Undergraduate Programs

The School of Biomedical Engineering (SBME) stands on a foundation of strong faculty and research programs from four CSU colleges: the Walter Scott, Jr. College of Engineering, and the Colleges of Health and Human Sciences, Natural Sciences, and Veterinary Medicine & Biomedical Sciences. The unique structure of the School involves over 70 faculty members representing 14 departments to provide an interdisciplinary focus on improving health, fighting disease, and aiding persons with disabilities. Academic excellence across diverse fields converges into three primary areas of research: (1) regenerative and rehabilitative medicine, (2) imaging and diagnostics, and (3) medical devices and therapeutics.
At the graduate level, SBME offers a Master of Science and a Doctor of Philosophy in Bioengineering, and a Master of Engineering (online and on campus) with a specialization in Biomedical Engineering. See the Graduate and Professional Bulletin for graduate program listings. The Walter Scott, Jr. College of Engineering offers a Bachelor of Science in Biomedical Engineering with a unique five-year program where graduates receive two B.S. degrees: one in Biomedical Engineering and the other in one of three traditional engineering areas - Chemical & Biological Engineering, Electrical Engineering, or Mechanical Engineering. An undergraduate Biomedical Engineering Interdisciplinary Minor is also offered.

Biomedical engineering lies at the interface of engineering, biology, and medicine. With over 40 state-of-the-art biomedical and engineering research labs, including the world-renowned Veterinary Teaching Hospital and Animal Cancer Center, we offer hands-on experience for undergraduate and graduate students to work alongside leading researchers. CSU provides a rich environment for interdisciplinary research and day-to-day collaborations and is positioned to offer unique bioengineering degree programs due to our faculty expertise, the interdisciplinary nature of the SBME, and the highly-ranked veterinary program. Our Biomedical Engineering programs integrate biological, chemical, physical, and mathematical sciences with engineering principles and clinical studies, and our graduates are well prepared for careers in research, education, veterinary or human medicine, and industry.

Biomedical engineers are involved in a wide variety of activities on a daily basis. Practical applications of biomedical engineering include development, design, production, research, and/or teaching in areas such as:

- Designing biomedical materials and/or medical devices and equipment (e.g., pacemakers, assistive devices, exercise equipment for astronauts, creating/improving materials to help joint replacements last longer)
- Developing or improving therapies for fighting cancer, tuberculosis, or other illnesses and diseases (e.g., nanoscaffolding for localized chemotherapy delivery, telemetry sensors to determine healing rates in bone fractures or to detect key chemicals in live tissue with high temporal and spatial resolution)
- Finding better ways to image and/or diagnose illnesses (e.g., using laser-based imaging to detect viruses, developing ways to increase electrical signals to detect threats to food safety and security, designing biosensors to diagnose cancer cells, developing software to determine toxic pesticide levels in people)

Potential Occupations

Biomedical engineering applies engineering principles to medicine and improving quality of life for humans and animals. Biomedical engineers work in a variety of settings. Some biomedical engineers spend their days in the lab, researching new devices and systems that solve medical and health care-related problems. Others might work in clinical settings, run biomedical-focused enterprises, design/manufacture new therapies or diagnostics, assist medical facilities with engineering systems, or engage in regulatory affairs or patent law. Our graduates are well prepared for careers in research, education, or industry.

Undergraduate

Undergraduate Bachelor of Science Programs in Biomedical Engineering

The Bachelor of Science program in Biomedical Engineering has four pathways, each of which provide depth in a traditional area of engineering and breadth in biomedical engineering knowledge and applications. The coursework in these four pathways is designed not only to support biomedical engineering, but also to satisfy the curricular requirements of one of four traditional engineering degrees as administered by partner engineering departments.

The four curricular pathways for the BME B.S. degree are:

- B.S. degree in Biomedical Engineering combined with a B.S. degree in Chemical and Biological Engineering
- B.S. degree in Biomedical Engineering combined with a B.S. degree in Electrical Engineering, Electrical Engineering Concentration
- B.S. degree in Biomedical Engineering combined with a B.S. degree in Electrical Engineering, Laser and Optical Concentration
- B.S. degree in Biomedical Engineering combined with a B.S. degree in Mechanical Engineering

The BME program requires 157-158 credit hours of coursework, depending on the selected pathway, nominally distributed over five years.

In the first two years, students take introductory biomedical engineering courses as well as foundational math, science, and engineering courses. The third year and fourth years solidify expertise in the traditional engineering major while building strength in biomedical engineering, life and physical sciences courses. The following years allow students to build a more thorough understanding of biomedical engineering, and their studies culminate in a Senior Design project in the fifth year that provides hands-on experience with an interdisciplinary team of peers. This combination of practical application and traditional academic rigor support the breadth and depth of this fairly unique program, and provides excellent preparation and market value for graduates’ next steps in industry, academia, or research.

The Bachelor of Science in Biomedical Engineering at Colorado State University is accredited by the Accreditation Board for Engineering and Technology (ABET). It was first accredited in 2016, and this accreditation is retroactive for all prior graduates of the B.S. in biomedical engineering program. The partner majors include electrical engineering (EE), chemical and biological engineering (CBE), and mechanical engineering (MECH) and these three degree programs are accredited by the Engineering Accreditation Commission of ABET.

The educational objectives of the biomedical engineering program are to prepare our students to:

- demonstrate high professional, social, and ethical standards while examining and addressing the global impact of technology to improve quality of life in society and environment
- apply broad and deep knowledge, practical experiences, and creativity to solving problems at the interface of engineering and the life sciences as individuals and team members
- use their multidisciplinary background to foster communication and collaboration across professional and disciplinary boundaries
- recognize and expand the scope of their knowledge, continue self-directed learning, and identify and create professional opportunities for themselves and others

Graduates in Biomedical Engineering will have:
• an ability to identify, formulate, and solve complex engineering problems by applying principles of engineering, science, and mathematics
• an ability to apply engineering design to produce solutions that meet specified needs with consideration of public health, safety, and welfare, as well as global, cultural, social, environmental, and economic factors
• an ability to communicate effectively with a range of audiences
• an ability to recognize ethical and professional responsibilities in engineering situations and make informed judgments, which must consider the impact of engineering solutions in global, economic, environmental, and societal contexts
• an ability to function effectively on a multidisciplinary team whose members together provide leadership, create a collaborative and inclusive environment, establish goals, plan tasks, and meet objectives
• an ability to develop and conduct appropriate experimentation, analyze and interpret data, and use engineering judgment to draw conclusions
• an ability to acquire and apply new knowledge as needed, using appropriate learning strategies
• an ability to apply principles of engineering, biology, human physiology, chemistry, calculus-based physics, mathematics (through differential equations), and statistics;
• an ability to solve bio/biomedical engineering problems, including those associated with the interaction between living and non-living systems;
• an ability to analyze, model, design, and realize bio/biomedical engineering devices, systems, components, or processes; and
• an ability to make measurements on and interpret data from living systems

### Major Completion Map

#### Distinctive Requirements for Degree Program:

**TO DECLARE MAJOR:** Engineering is a controlled major: students are admitted into the major only if they meet established academic standards. Please see competitive major requirements or the advisor in the Department for more information.

**TO PREPARE FOR FIRST SEMESTER:** The curriculum for this major assumes students enter college prepared to take calculus and chemistry. To qualify for graduation, students in the biomedical engineering combined with chemical and biological engineering program must achieve a minimum 2.000 grade point average at CSU in all courses in engineering, mathematics, computer science, statistics, physics, and chemistry as well as courses taken as technical electives.

Dual Degree Program: Biomedical Engineering combined with Electrical Engineering, Electrical Engineering Concentration

Requirements
Effective Fall 2021

In order to maintain professional standards required of practicing engineers, the Department of Electrical and Computer Engineering requires a cumulative grade point average of at least 2.000 in ECE courses as a graduation requirement. It is the responsibility of any student who fails to maintain a 2.000 average to work with their advisor to correct grade point deficiencies. In addition, it is required that students retake any Electrical Engineering course at the 300-level or below in which they receive a grade below a C (2.000).

1 Students are required to complete three Career Development Seminars: 1) Resume Writing; 2) Behavior Based Interviewing; and 3) Using LinkedIn™. Completion of the required workshops may be spread over the student’s five-year program.

2 CS 152, MATH 151, STAT 158, and either CS 163 or CS 164 may be taken as BME Broad Elective ONLY when not taken to fulfill degree requirements. Credit not allowed for both CS 163 and CS 164.

**Major Completion Map**

**Distinctive Requirements for Degree Program:**

**TO DECLARE MAJOR:** Engineering is a controlled major: students are admitted into the major only if they meet established academic standards. Please see competitive major requirements or the advisor in the Department for more information.

**TO PREPARE FOR FIRST SEMESTER:** The curriculum for this major assumes students enter college prepared to take calculus and chemistry. To qualify for graduation, students in the biomedical engineering combined with chemical and biological engineering program must achieve a minimum 2.000 grade point average at CSU in all courses in engineering, mathematics, computer science, statistics, physics, and chemistry as well as courses taken as technical electives.

The ECE curriculum has been modified as part of the Revolutionizing Engineering Departments initiative (RED). Three threads run through the new curriculum: Foundations, Creativity and Professional Formation of Engineers. This new curriculum incorporates skills that engineers need beyond technical expertise, in areas like communication, ethics, social impact and interaction in large, diverse groups. The ECE department requires that students also complete the following three Career Development Seminars: 1) Resume Writing; 2) Behavior Based Interviewing (or Mock Interviewing); and 3) Using LinkedIn™. In order to maintain professional standards required of practicing engineers, the Department of Electrical and Computer Engineering requires a cumulative grade point average of at least 2.000 in ECE courses as a graduation requirement. It is the responsibility of any student who fails to maintain a 2.000 average to work with their advisor to correct grade point deficiencies. In addition, it is required that students retake any Electrical Engineering course at the 300-level or below in which they receive a grade below a C (2.000).

Dual Degree Program: Biomedical Engineering combined with Electrical Engineering, Lasers and Optical Engineering Concentration

Requirements
Effective Fall 2021

In order to maintain professional standards required of practicing engineers, the Department of Electrical and Computer Engineering requires a cumulative grade point average of at least 2.000 in ECE courses as a graduation requirement. It is the responsibility of any student who fails to maintain a 2.000 average to work with their advisor to correct grade point deficiencies. In addition, it is required that students retake any Electrical Engineering course at the 300-level or below in which they receive a grade below a C (2.000).

Students are required to complete three Career Development Seminars: 1) Resume Writing; 2) Mock Interview or Behavior Based Interviewing; and 3) Using LinkedIn”. Completion of the required workshops may be spread over the student’s five-year program.

1. CS 152, MATH 151, STAT 158, and either CS 163 or CS 164 may be taken as BME Broad Elective ONLY when not taken to fulfill degree requirements. Credit not allowed for both CS 163 and CS 164.

**Major Completion Map**

**Distinctive Requirements for Degree Program:**

**TO DECLARE MAJOR:** Engineering is a controlled major: students are admitted into the major only if they meet established academic standards. Please see competitive major requirements or the advisor in the department for more information.

**TO PREPARE FOR FIRST SEMESTER:** The curriculum for this major assumes students enter college prepared to take calculus and chemistry. To qualify for graduation, students in the biomedical engineering combined with chemical and biological engineering program must achieve a minimum 2.000 grade point average at CSU in all courses in engineering, mathematics, computer science, statistics, physics, and chemistry as well as courses taken as technical electives.

In order to maintain professional standards required of practicing engineers, the Department of Electrical and Computer Engineering requires a cumulative grade point average of at least 2.000 in ECE courses as a graduation requirement. It is the responsibility of any student who fails to maintain a 2.000 average to work with their advisor to correct grade point deficiencies. In addition, it is required that students retake any Electrical Engineering course at the 300-level or below in which they receive a grade below a C (2.000).

### Major Completion Map

**Distinctive Requirements for Degree Program:**

**TO DECLARE MAJOR:** Engineering is a controlled major: students are admitted into the major only if they meet established academic standards. The biomedical engineering combined with mechanical engineering program has additional admissions requirements and enrollment limits. Please see competitive major requirements or the advisor in the Department for more information.

**TO PREPARE FOR FIRST SEMESTER:** The curriculum for this major assumes students enter college prepared to take calculus and chemistry. To qualify for graduation, students in the biomedical engineering combined with mechanical engineering must achieve a minimum 2.000 grade point average at CSU in all courses in engineering, mathematics, computer science, statistics, physics, and chemistry as well as courses taken as technical electives.

Department of Construction Management

Office in Guggenheim Hall, Room 102
The Construction Management (CM) program at CSU is one of the top-recognized programs in the nation. Since its inception in 1946, more than 5,000 students have graduated, many of them going on to become leaders in their field. The program is accredited by the American Council for Construction Education.

Construction management is the overall planning, coordination, and control of a project from inception to completion. The CM major addresses issues related to the management of multiple project sites and the applications of resource management, schedule control, cost control, design, and other requirements of the construction process. Design elements concentrate on the relationship between the built environment and the comfort of its inhabitants while safety education emphasizes the health of the individual worker.

**Undergraduate Program**

A major in Construction Management provides a strong foundation for professional careers in the construction industry. The curriculum integrates technology and innovative management systems with the basics of civil engineering, business and management, and the communication skills required to be successful in today’s world. Coursework includes construction methods, estimating, scheduling, computer technologies, architectural principles, fundamentals of management and law, steel and concrete structures, and soils. The curriculum incorporates hands-on labs for most courses. This diverse program creates a broad range of career options for graduates.

**Graduate Program**

The Department of Construction Management offers graduate study leading to the Master of Science degree. The focus of the department is on professional programs that successfully combine theory and application with a strong emphasis in research. The master's program is an advanced curriculum designed to allow students to tailor a portion of the specialization requirements to meet individual interests and goals.

Major in Construction Management

The Construction Management major at CSU is one of the top-recognized programs in the nation. Since its inception in 1946, more than 5,000 students have graduated, many of them going on to become leaders in their field. The program is accredited by the American Council for Construction Education.

Construction management is the overall planning, coordination, and control of a project from inception to completion. The Construction Management major addresses issues related to the management of multiple project sites and the applications of resource management, schedule control, cost control, design, and other requirements of the construction process. Design elements concentrate on the relationship between the built environment and the comfort of its inhabitants while safety education emphasizes the health of the individual worker.

A Construction Management major provides a strong foundation for professional careers in the construction industry. The curriculum integrates technology and innovative management systems with the basics of civil engineering, business and management, and the communication skills required to be successful in today's world. Coursework includes construction methods, estimating, scheduling, computer technologies, architectural principles, fundamentals of management and law, steel and concrete structures, and soils. The curriculum incorporates hands-on labs for most courses. This diverse program creates a broad range of career options for graduates.

The Construction Management major is controlled, and all students admitted to CSU or seeking to change their major must first be designated as pre-construction management. The minimum criteria for the Construction Management major are:

- Complete a minimum of 15 credits at CSU
- Earn a minimum 2.750 cumulative CSU GPA
- Complete CON 101 with a “B” grade or better
- Complete CO 150 with a “B” grade or better
- Complete MATH 125 with a “C” grade or better

Once a student has met the minimum requirements listed above, they are eligible to apply to the Construction Management program. Since the Construction Management major does have controlled enrollment, students meeting the above minimum requirements are admitted based on their overall academic performance and space availability.

During their academic career, Construction Management students are required to obtain an internship (full-time structured work experience) position with any one of a variety of construction companies and organizations. Our Phelps Placement Office assists current and graduating students, as well as alumni.

Learning Outcomes

Students will develop and demonstrate:

- Professional, analytical, and problem-solving skills related to the career requirements in construction management
- Strong professional communication skills with an emphasis on written, graphic, and verbal skills related to the career requirements in construction management
- Technical proficiency in the following construction management areas: design/engineering, management, materials, methods, estimating, scheduling, safety, surveying, and project administration

Potential Occupations

The construction industry has become a highly technical industry marked by continuous and dramatic change. There is a continued demand for capable and highly trained construction management professionals who can adapt and become effective leaders in the field.

The Construction Management department prides itself on its in-house intern and job search assistance and counseling. Construction Management continues to boast one of the highest placement rates and entry-level salaries of all majors.

Services provided by the Phelps Placement Office include:

- Construction industry career fair hosted each semester
- On-campus interviews and information sessions
- Individual career counseling and assessment
- Job and internship search strategies
Entry-level occupations include, but are not limited to: field engineer, assistant estimator, project scheduler, cost control engineer, safety engineer, project supervisor, project coordinator, quality assurance specialist, project engineer, assistant project manager, and assistant superintendent. Recruiting Industries include Commercial, Heavy Civil and Heavy Highway, Industrial and Utility, Mechanical and Electrical, Project Controls and Consulting, Residential Development, Specialty Contracting, and Transportation.

Students may consider simultaneously completing the requirements for a minor in Business Administration. Several of the courses required for the minor in Business Administration are also required for the major in Construction Management curriculum.

Master of Science in Construction Management, Plan A

The Department of Construction Management (https://www.chhs.colostate.edu/cm/) offers graduate study leading to the Master of Science degree. The graduate program provides an environment that supports graduate students in their development of knowledge necessary to enhance professional practice and apply research to management decisions that impact organizations in an emerging global economy. The master’s program is an advanced curriculum designed to allow students to tailor a portion of the requirements to meet individual interests and goals.

The Department of Construction Management at CSU is a Science, Technology, Engineering, and Mathematics (STEM) program.

Our faculty members pursue applied research opportunities by maintaining a close association with the needs of the regional, national, and global Architecture/Engineering/Construction industry. In pursuing this applied research, the faculty has identified core research areas that span research, teaching, and outreach activities and provide a common ground for interaction between faculty and students. As the demands of the industry change over time, these research areas may evolve and additional areas may be established.

Current research areas include:
- Construction Education and Workforce Development
- Construction Technology
- Infrastructure Systems
- Project Delivery and Management
- Sustainability and Resilience

The learning outcomes of this program are:

1. Students will identify research problem(s), develop research question(s), design research methodologies, collect and analyze data, and interpret research results as components of scientific research.
2. Students will develop critical thinking skills needed to conceive, develop, test, and refine scientific ideas and hypotheses.
3. Students will communicate the results of their original research in a clear and well-organized manner both in written (proposal and thesis) and verbal (thesis and oral defense) format.
4. Students will write manuscript(s) for submission to a refereed scientific journal or a conference based on their research.
5. Students will develop expertise in one or more fields of construction management at which the student can successfully function in the profession (either academia or industry).

Each construction management graduate student must complete a final project of professional quality to demonstrate their capability in their area of interest and their readiness for professional practice. The final research project is original work, involving a substantial degree of independent research and analysis. The research project results are presented as either a Thesis (Plan A) or Professional Research Paper (Plan B). Each student will work with their advisor to determine if a thesis or a professional paper is more appropriate. Each graduate student is required to submit an article to a journal or proceedings approved by the adviser prior to graduation.

The goal of the program is to provide graduate students with skills related to advance construction management problem-solving. To attain this goal, the CM department encourages students to perform applied research that is industry, institutional, or “client” based.

About the Minor
The Construction Management minor is designed to provide students an opportunity to study basic concepts of construction, materials, techniques, design, and managerial skills required for the construction industry. The minor has entrance criteria and consists of nine courses beginning with CON 101. The minor will take students a minimum of five semesters to complete.

How to add the Construction Management minor
Students must meet with a Construction Management advisor to declare interest in the minor and will be given an override to register for CON 101. An application must be completed to declare the minor. Once a student satisfies the entrance criteria, the minor will be added and the student will be allowed to register for additional required Construction Management courses. Students are admitted each semester in May and December.

Entrance Criteria:
- Earn a minimum 2.750 cumulative CSU GPA
- Complete CON 101 with a “B” grade or better
- Complete CO 150 with a “B” grade or better
- Complete MATH 125 with a “C” grade or better

Students who want to develop technical proficiency in a particular area or emphasis may choose Plan B. Professional research paper is not held to the same standards for replicability of the research methodology used for a thesis. Results from a professional paper may be directed toward providing a solution to a specific applied problem for a small audience. There is an expectation that the professional paper could still be published, but the outlets would likely be different than those of a thesis. A minimum of 30 upper-division credits are required for Plan B students.

The goal of the program is to provide graduate students with skills related to advance construction management problem-solving. To attain this goal, the CM department encourages students to perform applied research that is industry, institutional, or “client” based.

Major in Apparel and Merchandising, Apparel Design and Production Concentration

The Apparel Design and Production concentration focuses on the development of knowledge and skills necessary to engage in the design and creation of textile and apparel goods for an identified target market. This includes coursework in aesthetics and design, fashion/trend forecasting, fashion illustration, pattern development; material selection (e.g., fibers, fabrics, dyes/finishes), apparel construction techniques, computer-aided design (CAD), historic textiles and costume, and social-psychological aspects of dress.

Students applying to the Apparel Design and Production concentration are accepted first into the Apparel and Merchandising major. Full acceptance into the Apparel Design and Production concentration requires passing the portfolio review held in the spring semester and a minimum 2.500 GPA. Industry professionals in the field of apparel design and manufacturing evaluate student portfolios. Each year, the 20 to 25 students who receive the highest scores on the portfolio evaluation are accepted into the Apparel Design and Production concentration, and they become eligible to enroll in apparel design and production courses.

Minor in Merchandising

A minor in Merchandising provides students in other majors an opportunity to gain knowledge and skills specific to the field of merchandising. The minor may be of special interest to students majoring in areas such as art, business, and journalism and technical communication. The perspectives gleaned by selecting a Merchandising minor both enhance understanding of the student’s major program and expand career opportunities available to the student.

The Apparel and Merchandising program emphasizes study in apparel and textile design, product development and sourcing, and the marketing and retailing of consumer goods. The program encompasses the global study of the cultural/historical economic, and scientific aspects of the textile and apparel industry while fostering an understanding and implementation of socially responsible business practices.

Learn more about the minor in Merchandising on the Department of Design and Merchandising website (https://www.chhs.colostate.edu/dm/programs-and-degrees/minor-in-merchandising/).

Requirements
Effective Fall 1999

Students must satisfactorily complete the total credits required for the minor. Minors and interdisciplinary minors require 12 or more upper-division (300- to 400-level) credits.

Additional coursework may be required due to prerequisites.

Major in Interior Architecture and Design

The Major in Interior Architecture and Design exemplifies the definition of the professional designer as qualified by education, experience, and examination to design interior environments that enhance the function and quality of life, increase productivity, and protect the health, safety, and welfare of the public. Academic preparation is grounded in research-based problem solving and experiential education through studio instruction, service learning, and internships that encompass a variety of cultural, environmental, and historical perspectives. The program has a longstanding accreditation by the Council for Interior Design Accreditation (CIDA), recognizing the highest academic standards established by the profession.

Students seeking to apply to the Interior Architecture and Design major at CSU first are admitted to CSU as Pre-Interior Architecture and Design. All students who wish to be considered for admission to Interior Architecture and Design (IAD) major will be required to complete the Interior Architecture and Design Scenario practicum. Selective advancement into the major is based on the review received at the IAD Scenario, where external reviewers will assess student competencies in writing for design, sketching, problem-solving, and conceptual frameworks. A cohort of approximately 50-60 students advances based on performance on the IAD Design Scenario. The IAD Design Scenario occurs annually in the spring semester. See the Department of Design and Merchandising (https://www.chhs.colostate.edu/dm/) for more information regarding the Interior Architecture and Design Scenario.

In order to participate in the Interior Design Scenario students must have the following:

- GPA of 2.500 or higher.
- Completion of or current enrollment in INTD 110, INTD 129 and INTD 166 or equivalent. Equivalent courses from other institutions must be approved at least two weeks prior to the IAD Design Scenario by the IAD transfer advisor.

The Design and Merchandising department Academic Success Coordinator will work with Pre-Interior Architecture and Design students and advise them on their current performance in relation to the possibility of their admission to Interior Architecture and Design.

Faculty in the Interior Architecture and Design program value learning as a collaborative effort inviting diversity, design research as a basis for excellence in design practice, and new models for learning to respond to new ways of working. The program guides students toward becoming dedicated professional designers who have strong communication skills, are active as team players and creative problem solvers, and who make a positive impact in the practice of interior architecture and design. Students engage in research-based problem solving, providing a solid transition from education to practice in a global community. An internship in interior architecture / interior design practice is required for graduation.

The Interior Architecture and Design graduate will learn the entirety of the design process, beginning with assessment of client needs through
design programming, development of alternative design solutions, development of conceptual and theoretical frameworks, selection of furniture and finish materials, construction documentation, core compliance, and contract administration including project management and post-occupancy evaluation methodologies. In addition, students take course work in construction/ building systems and codes, business principles in interior architecture and design, computer-aided design and drafting, building information modeling, animation, multimedia, graphic visualization, history of architecture and interiors, and sustainable practices.

The teaching facilities include design studios and critique spaces; gallery; design materials library (https://www.chhs.colostate.edu/dm/design-library/); virtual reality computer labs; and fabrication labs (prototyping, woods, metals, & screen printing).

**Learning Outcomes**

- Interior Architecture and Design core skills will include but are not limited to: applications of history and culture; space and form; color and light; fixtures, equipment, and finish materials; environmental systems; building systems, and interior construction; technology; and regulations.
- Students in the Interior Architecture and Design major will be able to assess and synthesize multiple factors in creating/producing quality products, services, and design solutions. The factors will address human, design, industry and business, global, science and technology sensitivities.
- Students will be able to describe their understanding of multiple processes that are involved in the practice of interior architecture and design. These processes include but are not limited to critical and creative thinking, communication, ethics, social responsibility and sustainability, and interdisciplinary collaboration.
- Students will distinguish and demonstrate qualities of professionalism and business practices that contribute to the industry, and advance the value of their knowledge to the interior built environments.
- Students will enroll in Internships credits at least one semester before graduation.
- Students who engage in co-curricular learning experiences will have the opportunity to network with industry professionals, assist with department recruiting events and new student orientations, and attend a variety of leadership events.

**Potential Occupations**

Students are prepared to practice interior architecture/interior design with competency in design fundamentals, space planning and programming, code compliance, lighting, materials research, project management, and professional practices in the design of diverse interior spaces.

Graduates seek employment in interior design and architecture firms as residential, corporate, retail, health care, institutional, education, and hospitality designers. Graduates also work in lighting design, product development, marketing, research, design-related journalism, illustration, facility management, showroom management, and as manufacturers’ representatives.

The Nancy Richardson Design Center is a multi-disciplinary center located in the College of Health and Human Sciences at CSU, with a mission to foster interdisciplinary creative collaboration. It serves as a design-thinking hub where students from across campus can gather to collaborate, innovate, and prototype creative ideas in formal and informal learning spaces using state-of-the art equipment and technology. The RDC has: 4 studio/lab classrooms for hands-on learning, 1 seminar room for use by professional staff, 1 small dedicated project room that can also be used for student teams and visiting designers-in-residence, 2 computer labs, a design exchange (for student presentations, gallery exhibitions, special lectures and events, etc.), an ideation lab (including virtual reality equipment), prototyping lab (laser cutters, 3d printers, CNC textile equipment, etc), metal shop (traditional metalworking tools, welding, as well as state-of-the-art CNC milling machinery), wood shop (traditional woodworking hand and power tools as well as a large (4’x8’) CNC router), and a sustainable dark room.

Admission to Teacher Licensure

Students who wish to pursue an endorsement program should apply for admission to the CEP teacher preparation program. Students have three different program options - undergraduate, post-bachelor, and Master of Education. Application and admission requirements differ based on which
program a student is interested in pursuing. (Note: Admission requirements are subject to change based on program and state licensing requirements and laws.)

For detailed information about application and admission requirements and deadline dates, please contact the Center for Educator Preparation Advising Office (https://www.chhs.colostate.edu/soe/center-for-educator-preparation/advising/). We welcome in-person visits, phone calls or email.

Student Teaching

Teacher licensure candidates apply for student teaching placement one semester before student teaching. Candidates must pass the state licensing exam (Praxis) in their respective teaching content area by mid-April or mid-October before beginning their student teaching experience. Additionally, candidates must demonstrate acceptable professional dispositions and academic fitness. Student teaching must be completed at an approved school. Placement is contingent upon acceptance of the student by a school system. All assignments are made by CSU. This experience is full-time for a specified time period.

Requirements for Licensure

Colorado licensure requires completion of an approved teacher preparation program and the recommendation of the institution at which the program was completed. The CEP Co-Directors and Student Teaching Coordinator serve as the licensure officers for CSU. Additional requirements of the Colorado Department of Education and the Colorado Department of Higher Education include the successful completion of the state licensing exam. Successful completion of the approved teacher preparation program at CSU does not guarantee successful completion of the state licensing exam.

Students who successfully complete an approved teacher preparation program will be prepared to pursue licensure in Colorado. Licensure requirements in other states and U.S. territories may differ. Students are encouraged to work with the department and the professional licensure board in the state in which they intend to pursue licensing to ensure all requirements are satisfactorily met. CEP does not assume responsibility for the successful completion of the state licensing exam.

CSU's approved teacher preparation program requirements include completion of a baccalaureate degree, completion of the content area and professional education course work, and fulfillment of the Colorado Performance-Based Standards for teachers at the proficient or advanced proficient level. Additionally, all grades earned in professional education and content courses must be a C or better for licensing. The minimum scholastic average acceptable for completion of the teacher preparation program and recommendation for licensing is 2.750, computed for all course work.

CSU reserves the right to not recommend a student for licensure on the basis of unacceptable professional dispositions and academic fitness/performance.

Professional Education Coursework for Licensure

The professional education requirements listed below apply to all teaching endorsement areas except early childhood education where EDUC 400, EDUC 425, and EDUC 426, are required in place of EDUC 350, EDUC 386, EDUC 450, and EDUC 486E. Additional courses may be required by specific endorsement areas. For clarification, refer to individual coursework check sheets which can be obtained in the Education Building, room 111, and on the CEP website (https://www.chhs.colostate.edu/soe/center-for-educator-preparation/undergraduate-teacher-licensure/).

Candidates in all endorsement areas must complete appropriate methods courses the semester prior to enrolling in student teaching. (EDUC/EDCT 4XX - level courses)

Career and Technical Education

Individuals desiring to teach in or administer career and technical programs in the state of Colorado must qualify for a credential in addition to a teaching license. Those who plan to qualify as career and technical education teachers or directors must meet the requirements for a CTE credential established by the Community Colleges of Colorado and the Colorado Department of Education. Credentialing questions may be directed to the Department of Education, (303) 866-6628.

Professional Education Course Requirements

The professional education course requirements listed under Professional Education Coursework for Licensure apply to all teaching endorsement areas in career and technical education.

Major in Family and Consumer Sciences

Family and Consumer Sciences (FCS) is an exciting field with many career opportunities. The mission of this interdepartmental major is to prepare professionals dedicated to enhancing the well-being of individuals, families, and the communities and environments in which they live and/or work.

Students graduate with an interdisciplinary perspective about the challenges encountered by families and consumers. Through coursework, students gain skills to assist families and consumers with quality of life decisions and challenges related to interpersonal/human relationships, consumer and financial resource management, personal development, nutrition and wellness, and balancing family and work.

- Design and Merchandising
- Health and Exercise Sciences

Students have the option of the FCS concentration or the FCS Education concentration. Upon graduating, students will be eligible to take the exam to be certified in FCS with the American Association of Family and Consumer Sciences.

Learning Goals
Students will:

- demonstrate an understanding and comprehension of the FCS body of knowledge
- demonstrate, at a professional level, oral and written communication and problem-solving proficiency within FCS
- demonstrate synthesis and integration of the specialized FCS body of knowledge through engaged learning experiences
- choose, examine, and assess the impact of civic engagement relevant to FCS

Potential Occupations
Our graduates’ career opportunities include, but are not limited to:

- Secondary classroom teacher
- Cooperative extension/agent
- Consumer information specialist
- Program development
- Consultant
- Product representative
- Customer service specialist
- Writer/developer of informational or educational materials
- Governmental, community, and non-profit agency worker
- Child/youth family advocacy
- Family financial officer
- Wellness director
- Peace Corps volunteer

Teaching opportunities at the middle school, junior high, high school, or post-secondary level are available upon completion of the education concentration.

The FCS major provides a strong foundation for graduate work. Graduate degree opportunities are available in the School of Education or other departments related to family and consumer sciences (e.g., Design and Merchandising, Food Science and Human Nutrition, Human Development and Family Studies, Social Work, Occupational Therapy).

Concentrations

- Family and Consumer Sciences Concentration
- Family and Consumer Sciences Education Concentration
Major in Family and Consumer Sciences, Family and Consumer Sciences Concentration

The Family and Consumer Sciences concentration provides students with a focus on family and consumer well-being, growth and development of family members, and the relationship of households to their environment. This concentration is interdisciplinary, bringing together coursework in human development, family studies, nutrition and foods, consumer sciences, personal finance, apparel and textiles, design and merchandising, and health and wellness.

It is highly recommended that students participate in internships, volunteer activities, or cooperative extension opportunities to enhance their experiences and development. Graduates who seek advanced degrees often attain higher-level professional positions.

The concentration includes All-University Core Curriculum courses, subject matter courses, and elective courses to enhance personal and professional development.

Major in Family and Consumer Sciences, Family and Consumer Sciences Education Concentration

Family and Consumer Sciences (FCS) directly addresses the needs of youth, families, and consumers. Helping to shape the future, FCS teachers impact the lives of individuals, the health of families, and the welfare of society.

The mission of the Family and Consumer Sciences Education concentration is to teach and model best educational practices to prepare emerging teachers as learners, collaborators, and leaders. This concentration is a licensure program that prepares students to teach family and consumer sciences subject matter in middle and high school classrooms. The program includes general education courses, subject matter courses, and teacher preparation courses.

Students apply for the licensure program in their junior year, and participate in practicum experiences working closely with classroom teachers and students in area schools. Throughout the phases of the licensure program, teacher candidates are placed in a middle school and in a high school, where they apply professional knowledge and refine their instructional skills. While student teaching, they work closely with a FCS mentor teacher(s) and a university coach.

Teacher candidates completing the program meet the requirements for the Bachelor of Science degree in FCS, a Colorado Initial Teaching License in FCS, and a FCS Career and Technical Education endorsement (with appropriate work experience hours).

This concentration is accredited and approved by the Colorado Department of Higher Education and the Colorado Department of Education. Nationally, it is approved by the Teacher Education Accreditation Council.

Students interested in pursuing a teaching license through CSU may also contact the School of Education (https://www.chhs.colostate.edu/soe/) and the Center for Educator Preparation (CEP). (https://www.chhs.colostate.edu/soe/center-for-educator-preparation/)

Students who successfully complete this program will be prepared to pursue licensure in Colorado. Licensure requirements in other states and U.S. territories may differ. Students are encouraged to work with the department and the professional licensure board in the state in which they intend to pursue licensing to ensure all requirements are satisfactorily met.

Master of Science in Student Affairs in Higher Education

The M.S. in Student Affairs in Higher Education (SAHE) program is designed for students seeking careers in student affairs and higher education administration in a college setting through a curriculum taught by faculty who are both scholars and practitioners. Topics of study include:

- Theories, assessments, and evaluations related to student affairs practice
- Cross-cultural and diversity issues within the context of higher education
- How diverse student learning, developmental theory, and research are relevant to students' education and development
- Current issues and practices in the student affairs profession

A central component of the SAHE program is engaging in intentionally reflective practice as a foundational skill necessary for effective practice in student affairs. This is both a process and an outcome such that reflection-on-action happens in the program to produce practitioner-scholars who can effectively reflect-in-action. The 45 credit-hour degree is offered in two formats: in-person on CSU’s main campus and through CSU Online (https://www.online.colostate.edu/degrees/student-affairs/).

Major in Fermentation Science and Technology

Fermentation Science and Technology is a multidisciplinary major focusing on the science of fermented foods and beverages. The curriculum focuses on the science of the processes and methods involved with using microorganisms in the commercial production of fermented products. Courses in the major also emphasize the safety, culinary, and nutritional aspects of fermented foods and beverages. This major prepares students for employment in the fermented food and beverage industries in such roles as product development, processing, quality assurance and control, sensory evaluation, packaging, distribution, and plant management. Students enrolled in this major have the opportunity to participate in industry activities and professional organizations to increase their practical understanding of fermented food and beverage production, processing methods, and specific techniques.

Learning Outcomes

Students will demonstrate:

- Ability to integrate biological and chemical processes to quality and stability of fermented foods, and to critique and effectively communicate the relationships among the processing of fermented foods, nutrition, and food safety.
- Discipline-specific knowledge of the skills and competencies needed in fermentation science and technology. Examples include knowledge of food chemistry, sensory evaluation of fermented products, brewing processes, refining and packaging technology, food production management, and fermentation microbiology.
- Understanding of classification, production, financial aspects, consumption, and service of controlled beverages, including effective management of facilities and people with an emphasis on safe service training and management.
- Competent application of science, history, culture, safety, health, and nutrition dimensions of fermented foods and beverages.

Potential Occupations

Partnerships with industry help provide field experience and internships for majors in Fermentation Science and Technology. The food industry is the largest in the world and fermentation science is a rapidly emerging area, so the future is promising. Examples of careers include fermentation scientist, food scientist, food technologist, food health inspector, food safety specialist, brewer, biotechnologist, quality control analyst, sensory analyst, food microbiologist, or entrepreneur.

Major in Hospitality Management

The Hospitality Management major combines courses in foodservice, lodging, event planning, nutrition, and business to provide students with a strong skill set for entry into hospitality management professions. Elective credits allow students to take courses in areas of interest to enhance their education. The curriculum has a strong emphasis on management skills required for success in the hospitality industry.

The Hospitality Management program maintains strong ties with the foodservice, lodging, and event planning industries locally, statewide, and nationally to connect graduates with a wide variety of employment opportunities in the expanding commercial and non-commercial segments of hospitality management. The hospitality industry is the second largest employer in Colorado and the United States. The department oversees internships in the industry and aids in job placement upon graduation.

Learning Outcomes

Students will demonstrate:

- A conceptual understanding and systems approach to the business of hospitality management.
- The ability to make logical decisions by organizing, analyzing, and interpreting information and formulating rational solutions in a hospitality business environment.

- The knowledge and skills to successfully manage a hospitality operation, including allocating resources such as time, labor, and material inputs to achieve customer satisfaction.
- An understanding of the managerial functions of planning, organizing, directing, staffing, controlling, and budgeting in various hospitality environments.
- The behaviors of effective, ethical leaders by demonstrating the fundamental principles of leadership in a hospitality business environment.

Potential Occupations

Participation in the experiential learning laboratory, The Aspen Grille, is required and internship and practicum opportunities are highly recommended to enhance practical training and development. The hospitality industry encompasses careers in restaurants, hotels, resorts, spas, event venues, catering, breweries and wineries, bed and breakfast inns, ski areas, business and industry dining venues, hospitals, correctional facilities, and military facilities in the United States and around the world.

Examples of career positions include, but are not limited to restaurant managers, caterers, event planners, wedding planners, banquet managers, hotel sales and marketing, hotel guest operations, hospitality real estate acquisition, hotel managers, food writing and media, brewery hospitality operations, commercial wine, and liquor sales, chefs, purchasing agents, conference coordinators, guest service agents, tourist attraction managers, spa operations managers, housekeeping managers,
timeshare sales and marketing, bed & breakfast owner/managers, travel agents, school food service managers, hospitality food and equipment sales representatives, health inspectors, hospital food service managers, food importers, and country club managers.

**Major in Nutrition and Food Science**

Public interest regarding the importance of nutrition to health and fitness is at a high level and increasing. The Major in Nutrition and Food Science involves integration of the biological, medical, and social sciences and their application to the improvement of human nutrition and fitness, prevention of chronic disease, and improved quality of life. The major is both science- and human service-oriented.
Nutrition and Food Science graduates gain a scientific understanding of the principles of human nutrition, the role of nutrition in the prevention and management of disease, delivery of nutritional care, and the principles of nutrition assessment and food preparation. Additionally, graduates know the techniques of interviewing, counseling, information management, and effective communication.

Four concentrations are currently available in this major: Dietetics and Nutrition Management, Nutrition and Fitness, Nutritional Sciences (Pre-Health), and Food Safety and Nutrition.

**Learning Outcomes**

Students will demonstrate:

- Ability to identify nutrition-related public health problems, integrate information from basic nutrition sciences, critically analyze data, and develop appropriate conclusions

- Discipline-specific knowledge, skills, and competencies needed in the field of dietetics and nutrition. Examples include knowledge of medical nutrition therapy; nutrition and metabolism; program planning, monitoring, and evaluation; management in school nutrition programs and long-term care; food safety; and the role of food in the promotion of health

- Competent application of nutrition knowledge and skills in a work environment, including an ability to calculate and/or define diets for various health/disease conditions, screen individuals for nutritional risk, determine nutrient requirements across the lifespan, and calculate enteral and parental nutrition formulations; determine costs of services/ operations, interpret financial data, and prepare a budget

**Potential Occupations**

Participation in community outreach, internships, volunteer activities, or cooperative education opportunities is highly recommended to enhance career planning, skills, and development. Graduates who go on for advanced studies can attain more responsible leadership positions with the possibility of rising to top professional levels.

Some examples of career opportunities include, but are not limited to: dietitian or nutritionist in health care, hospitals, long-term care, schools, state or county health agencies, health clubs, corporate wellness programs, grocery stores/food chains, or private practice; community nutritionist; biomedical scientist; restaurant manager; caterer; quality assurance specialist; food scientist; food inspector; food technologist, food plant manager; food service manager in hospitals, schools, or long-term care. As of March 2020, the average salary for registered dietitians is $51,291, and the salary range is $39,000-67,000.

Students interested in teaching nutrition and/or food science content at the secondary education level should explore the interdepartmental concentration in Family and Consumer Sciences Education at the beginning of this college section. The Family and Consumer Sciences Education concentration allows students to combine their interests in nutrition, wellness/health, food science, culinary arts, and/or catering with teaching. Family and Consumer Sciences Education students take course work in the Departments of Food Science and Human Nutrition, Design and Merchandising, and Human Development and Family Studies.

They also complete an education sequence that qualifies them for a secondary teaching license. The demand for secondary Family and Consumer Sciences teachers exceeds the supply in Colorado as well as nationally. Therefore, job placement is extremely high, with starting salaries in the $34,000-$37,000 range for a nine-month teaching position.

Students may choose from among four concentrations under the Nutrition and Food Science major.

**Concentrations and Options**

- Dietetics and Nutrition Management Concentration
  - Accredited Didactic Program Option
  - Childhood Nutrition Option
  - Gerontology Nutrition Option

**Major in Nutrition and Food Science, Dietetics and Nutrition Management Concentration**

The Dietetics and Nutrition Management concentration provides a broad background in clinical nutrition, health promotion, and food service management. The science-based curriculum includes nutritional assessment, application of food theory, and course work focusing on nutritional counseling and medical nutrition therapy. The concentration is designed to prepare students for a dietetic internship and a professional career in medical nutrition therapy or community-based nutrition programs. The Accredited Didactic Program option of the Dietetics and Nutrition Management concentration is accredited by the Accreditation Council for Education in Nutrition and Dietetics (ACEND) of the Academy of Nutrition and Dietetics (AND). This concentration is open to all students interested in becoming registered dietitians. However, students must qualify to continue in the Accredited Didactic Program option by meeting the prerequisites for the Dietetic Practice Seminar (FShN 392) in their junior year. These prerequisites are an overall GPA of 3.000 and grades of “B” or better in FShN 150, FShN 300/ FShN 301, and basic sciences (CHEM 107/CHEM 108, or CHEM 111, CHEM 112, CHEM 113; CHEM 245, CHEM 246; LIFE 102 or BZ 110, BZ 111; BMS 300, BMS 302; FShN 150; FShN 300, FShN 301). Students who do not meet these requirements are encouraged to exercise their repeat/delete options in those courses which are lower than a "B" grade if they wish to be considered for the Accredited Didactic Program option. The Childhood Nutrition option prepares students for supervisory positions in the school nutrition program. The Gerontology Nutrition option prepares students for supervisory positions in food service management for long-term care and rehabilitation, or for working with community programs providing nutrition services to older individuals.

**Major in Nutrition and Food Science, Food Safety and Nutrition Concentration**

The Food Safety and Nutrition concentration blends a strong science base with courses in food science, food safety, food microbiology, and nutrition. The curriculum prepares students for employment in the food industry or in government in such areas as quality assurance, product development, research, food inspection, sensory evaluation, and consumer education. The concentration also provides an excellent background for a graduate program. Students in the concentration are encouraged to participate in the Food Science/Safety Interdisciplinary Minor to further their understanding of the continuum of responsibility shared through the food system in ensuring that food is safe and healthful. By adding several elective courses, students can also meet the Accreditation Council for Education in Nutrition and Dietetics (ACEND) (https://www.eatrightpro.org/acend/) course requirements.

Major in Nutrition and Food Science, Nutrition and Fitness Concentration

The Nutrition and Fitness concentration prepares students for employment as nutrition and fitness counselors and personal lifestyle coaches in health care settings, commercial establishments, public health settings, or private practice. The curriculum blends a strong science base with course work in exercise science, nutrition, teaching, and counseling. The concentration also provides an excellent background for a graduate program. By the addition of several elective courses, students can meet the Accreditation Council for Education in Nutrition and Dietetics (ACEND) (https://www.eatrightpro.org/acend/) didactic course requirements if they meet requirements for FSHN 392.

Learn more about the Nutrition and Fitness concentration on the Department of Food Science and Human Nutrition website (https://www.chhs.colostate.edu/fsbn/programs-and-degrees/b-s-in-nutrition-and-food-science/nutrition-and-fitness-concentration/).

Graduate Certificate in Nutrition Sciences

The Graduate Certificate in Nutrition Sciences is offered for students with a personal or professional interest in nutrition, health promotion, or disease prevention. Courses address the fundamentals of nutrition science and how it is involved in nutrient metabolism, obesity, chronic disease prevention, and other current or controversial areas in nutrition. Each course allows students to develop skills in locating credible sources of nutrition information, analyzing research, and debating contradictory information, all of which will support ongoing professional development. Online only.

Effective Fall 2017

Additional coursework may be required due to prerequisites.

Master of Science in Food Science and Nutrition, Dietetics Option (online)

The Great Plains Interactive Distance Alliance (GPidea) Online Master’s Program

The GPidea program offers a fully online M.S. in Food Science and Nutrition for Registered Dietitian Nutritionists and for graduates of accredited dietetics programs who have verification of completion of didactic requirements. The program is offered through a partnership of 8 different Universities (Colorado State University, Kansas State University, Kansas University Medical Center, University of Nebraska, Oklahoma State, Iowa State, South Dakota State, and North Dakota State). The collaboration provides a rich offering of online courses led by expert faculty from each institution. Students earn their degrees from CSU. Programs of study are designed to allow students the flexibility to individualize coursework and research to their specialty, interests, and career focus. The GPidea program objectives are to:

- Develop research skills, stimulate independent thought, and provide up-to-date knowledge in foods, nutrition, and foodservice and business management.

- Promote health and disease management through food and nutrition programs and make a difference in the lives of others by advancing the level of practice of registered dietitian nutritionists.

*This certificate may have courses in common with other graduate certificates. A student may earn more than one certificate, but a given course may be counted only in one certificate.

Learn more about the Online Graduate Certificate in Nutrition Sciences on the CSU Online website (https://www.online.colostate.edu/certificates/nutrition-sciences/).

It is important to note that this program is not a didactic program in dietetics and does not substitute for the completion of an accredited didactic program as the first step to becoming an RDN.
Learn more about the GPIdea program on the Department of Food Science and Human Nutrition website (https://www.chhs.colostate.edu/fshn/programs-and-degrees/m-s-in-food-science-and-nutrition-dietetics-option-online/).

Minor in Nutrition

This minor provides an opportunity for a non-major to gain a significant orientation to a food, nutrition, and health-related field. The courses in the Nutrition minor have a significant number of prerequisites that should be examined carefully before selecting the minor. Although open to any interested student, the Nutrition minor would be most easily taken by students majoring in a life science discipline such as biology or health and exercise science.

Learn more about the Minor in Nutrition on the Department of Food Science and Human Nutrition website.

Requirements

Effective Fall 2004

Students must satisfactorily complete the total credits required for the minor. Minors and interdisciplinary minors require 12 or more upper-division (300- to 400-level) credits.

Additional coursework may be required due to prerequisites.

Major in Health and Exercise Science

Students may choose from two concentrations offered in the Major in Health and Exercise Science: Health Promotion or Sports Medicine.

Learning Outcomes

Students will demonstrate:

- Practical knowledge and skill development gained from laboratory assessments, capstone experiences, community engagement, research, practicums, and internships.
- Ability to integrate, apply, and effectively communicate health and exercise science disciplinary knowledge through written assignments, program development, community involvement, and oral presentations.
- The ability to develop professional and influential leadership skills based on a strong ethical foundation and a commitment to diversity, equity, and inclusion.
- Skills and knowledge required to successfully compete for employment within the discipline or compete for graduate or professional school placement.

Potential Occupations

The United States and other developed countries are struggling with an aging and increasingly unhealthy population. Understanding the role of physical activity in preventing and treating disease and maintaining optimal health at any age is critical. Graduates trained in the foundations of human movement such as anatomy, physiology, exercise prescription and health behavior change AND the ability to apply this knowledge to enhance the health, well-being and functional performance of the public, will be in high demand.

We take pride in training students in Health and Exercise Science to be strong critical thinkers who can express themselves clearly in written and oral form, view the world from multiple perspectives and are models of professional behavior and citizenship: qualities that will serve them well in any career they choose to pursue. Graduates who choose the Health Promotion concentration also acquire theoretical and hands-
on training that makes them competitive for career opportunities in a wide variety of areas including, but not limited to: corporate fitness/wellness, community health/wellness, public health, health behavior change, exercise technicians, cardiac rehabilitation, personal trainers, group exercise/fitness instructors, fitness/medical equipment sales, and recreation directors. In the Sports Medicine concentration, graduates acquire additional course work in areas such as biomechanics, neurophysiology and human nutrition. This training provides excellent preparation for graduate studies in allied health areas and a variety of medical professions.

**Major in Health and Exercise Science, Health Promotion Concentration**

The Health Promotion concentration provides academic content and experience in promoting positive health behaviors such as physical activity, weight management, stress management, identification of risk factors associated with chronic disease (cardiovascular rehabilitation, cancer rehabilitation, pulmonary rehabilitation) and exercise prescription. The curriculum focuses on exercise science, behavior change, health promotion program development, business administration, and practical field experiences. This concentration prepares students for careers in a wide variety of allied health fields for all ages, from youth to older adults. Graduates of this concentration pursue careers working in clinical rehabilitative settings, corporate health and wellness programs, fitness facility management, strength and conditioning, non-profit organizations, public health, chiropractic fields, therapeutic recreation, firefighting, and health/wellness areas. Students in this concentration have also been very successful in continuing their formal education with graduate school.

1. MATH 155 or MATH 160 may be substituted for MATH 118, MATH 124, and MATH 125. You may not count MATH 155 or MATH 160 for a Sports Medicine Guided Elective if you have substituted one of these courses for MATH 118, MATH 124, & MATH 125.
2. CHEM 111/CHEM 112 can be substituted for CHEM 107/CHEM 108 and should be seriously considered by students who want to go on to graduate studies. Students should select CHEM 111/CHEM 112 as it better prepares students for CHEM 113/CHEM 114.
3. CHEM 341/CHEM 343/CHEM 344 may be substituted for CHEM 245/CHEM 246 provided that all three courses are completed.
4. Students taking the capstone will initially enroll in HES 478A, but have the option of applying for HES 478B/HES 478C/HES 478D, those selected will be re-enrolled in the appropriate course and section.
5. Select enough elective credits to bring the program total to a minimum of 120 credits, of which at least 42 must be upper-division (300- to 400-level).

Ph.D. in Human Bioenergetics

The Ph.D. in Human Bioenergetics covers all aspects of Health and Exercise Science. While it primarily prepares students for academic and research careers, it is also amenable to careers outside academia (e.g. public health, research foundations, footwear/equipment, pharmaceutical, or nutrition industries) that require advanced training in research. The program trains professionals in basic and applied research centered around preventing age-related decline in human health and function, understanding the pathophysiology of disease and disability, as well as designing and testing novel countermeasures and maximizing functional performance in first responders, soldiers, and athletes.

Online Degree Programs

The major in Human Development and Family Studies (HDFS) is offered in two formats, both leading to a Bachelor of Science degree. We offer classes to on-campus degree-seeking students and we offer distance students the HDFS degree through CSU Online (http://www.online.colostate.edu/degrees/hdfs/). The major in Human Development and Family Studies offered through CSU Online provides a flexible, convenient, and accessible format for busy, working, or distance students. The online program of study is the same as the on-campus version, is fully accredited, and is indistinguishable on student transcripts and diplomas from the on-campus version. The Gerontology Interdisciplinary Minor and courses required to pursue a variety of certifications are also available online.

Accelerated Program

The major in Human Development and Family Studies includes an accelerated program option (https://provost.colostate.edu/accelerated-programs/) for students to graduate on a faster schedule. Accelerated Programs typically include 15-16 credits each fall and spring semester for three years, plus 6-9 credits over two to three summer sessions (https://summer.colostate.edu/acceleratedprograms/). Students who enter CSU with prior credit (AP, IB, transfer, etc.) may use applicable courses to further accelerate their graduation. Visit the Office of the Provost website for additional information about Accelerated Programs (https://provost.colostate.edu/accelerated-programs/).

Gerontology Interdisciplinary Minor

The Gerontology Interdisciplinary Minor is housed in HDFS and is available on-campus as well as online. The Gerontology Interdisciplinary Minor offers students the opportunity to earn an undergraduate minor in gerontology with training across multiple disciplines. The Gerontology Interdisciplinary Minor prepares students to work in a variety of fields where it is critical to understand the aging process, including the biological, psychological and social aspects of adult development and aging. Admission is ongoing throughout the year. The full program may be found under University-Wide Instructional Programs.

Graduate

Graduate Programs in Human Development and Family Studies

The Department of Human Development and Family Studies (HDFS) offers a Master of Science degree with two specializations and one doctoral program in Applied Developmental Science. The focus of the department is on the study of individual and family development across the lifespan; the development, implementation, and evaluation of intervention and prevention programs for individuals and families at risk; and the influence of social institutions such as schools and communities on development. Our graduate programs advance students’ understanding of human behavior and development, as well as enable them to contribute to scholarship and professional practice.

Students interested in graduate work should refer to the Graduate and Professional Bulletin and the Department of Human Development and Family Studies (http://www.hdfs.chhs.colostate.edu/students/). (http://hdfs.chhs.colostate.edu/students/masters/)

Certificate

• Prevention Program Planning & Evaluation

Master’s Programs

There are two specializations offered under the Master of Science in HDFS. Prevention Science and Marriage and Family Therapy. Curricula in both programs include core courses in individual development, family theories, current research and issues in HDFS, and research methods. A research thesis is also required.

• Master of Science in HDFS, Marriage & Family Therapy Specialization
• Master of Science in HDFS, Prevention Science Specialization

Ph.D.

The program in Applied Developmental Science builds upon coursework completed in a master’s program, yet allows for more advanced, tailored, and personalized learning. Doctoral training also emphasizes mentorships with faculty in order to apply coursework to research in students’ areas of specialization.

Major in Early Childhood Education

(Effective Spring Semester 2015, the major in Early Childhood Education replaces the preparation for teacher licensure in Early Childhood Education, Birth through Grade 3. Contact the department for details.)

In collaboration with the Center for Educator Preparation (http://cep.chhs.colostate.edu/) within the School of Education (http://soe.chhs.colostate.edu/), the Department of Human Development and Family Studies provides a competitive-entry Major in Early Childhood Education requiring an application in the sophomore year for possible admission in the junior year. The degree enables students to apply for Early Childhood teacher licensure and Director Qualification (https://www.coloradoofficeofearlychildhood.com/oec/OEC_Providers/?p=Providers&s=Professional-Certifications&lang=en) in the state of Colorado. It qualifies students to engage in several early childhood professions supporting the development and education of infants, toddlers, and young children (0 - 8 years). Graduates may work in a range of contexts such as Pre K - 3rd grade in Colorado public or private schools, Head Start, other preschool or childcare programs, family or center care provider businesses, or serve as director of a childcare center. An understanding of human development and family studies provides a strong foundation for students desiring a license to teach infants and young children. Knowledge of lifespan developmental processes and family systems prepares future teachers to partner with parents, grandparents, and other caregivers to educate children. Students aspiring to work with newborns through children eight years of age can apply during their sophomore year to the major in Early Childhood Education. If accepted, students take courses in HDFS and SOE as a part of their degree requirements.

Students are encouraged to check the program of study and consult with HDFS academic advisers, as some prerequisites are required before entry into the major. The Early Childhood Education major uses a cohort model and admits a limited number of students, typically 25-30, each year. The admission process takes place once a year in the spring semester, with the admitted candidates starting in the fall. Students in the Early Childhood Education major achieve both Early Childhood Education core learning outcomes, obtained through HDFS and SOE courses and all learning outcomes required by the Colorado Department of Education for Early Childhood Education licensure. (http://www.cde.state.co.us/cdeprof/checklist-initialtoprofessionalteacher/)

Students who successfully complete this program will be prepared to pursue licensure in Colorado. Licensure requirements in other states and U.S.
territories may differ. Students are encouraged to work with the department and the professional licensure board in the state in which they intend to pursue licensing to ensure all requirements are satisfactorily met.

**Learning Outcomes**

Students will demonstrate:

- Content knowledge and understanding of theory, research, and practice relevant to optimizing the development, health, and well-being of children and families in the context of the larger social environment.
- Effective written and oral communication skills appropriate for early childhood educators interfacing with colleagues, children, and parents/guardians.

**Learning Outcomes**

Students will demonstrate:

- The ability to access, critically evaluate, and apply multiple forms of information related to children and families.
- Professional and leadership skills with individuals and families, including ethical and culturally sensitive conduct.
- Knowledge and skill in teaching and assessing literacy, mathematics, social studies, science, music, art, and physical education in early childhood.

**Requirements**

**Effective Fall 2021**

Students must complete the following courses with a C (2.000) or better to fulfill requirements for the major: all EDUC courses, all HDFS courses, and PSY 460.

### Major Completion Map

**Distinctive Requirements for Degree Program:**
Students seeking admission to the Early Childhood Education (ECE) Major with teacher licensure must formally apply and be accepted. The admission process into the program takes place once a year in the spring with the admitted candidates starting the program the following fall. All coursework within the Center for Educator Preparation (CEP) requires a 4 semester (or 2 year) consecutive commitment to complete, therefore EDUC subject code courses must be taken in the semester indicated. Requirements for applying to the ECE major: 1) Must have a 2.75 GPA or better, 2) Suggested to have completed 60 credits (or more) by the end of the semester in which the student is applying (typically students apply their second semester sophomore year), 3) Must have 20 hours of volunteer or work service with children ages 0-8 years (experience must have been within the last 5 years), 4) Must have 3 references. All HDFS subject code courses and EDUC subject code courses must be completed with a grade of C (2.000) or higher. Students will be required to pass a criminal arrest record background check prior to participating in field placement courses. Students will complete a graduation contract with an HDFS Academic Advisor during the first two weeks of the semester in which they are graduating.

Major in Human Development and Family Studies

Human Development and Family Studies (HDFS) is an interdisciplinary major focusing on the health and development of individuals across the lifespan, within the context of diverse families and social identities. Students complete foundational coursework in human development (i.e., infancy and childhood, adolescence, emerging and young adulthood, middle and later adulthood/aging), family studies, and evidence-based prevention and intervention programming in human services. Students study theory and emerging research in the field and learn to identify risk and protective factors influencing cognitive, emotional, social, and physical development across the lifespan. During their final year, HDFS students apply knowledge and skills from foundational course work through participation in a semester-long internship. Internship is a hallmark of the degree program that serves as a culminating experience preparing students for a professional career with diverse populations, communities, and organizations. The HDFS major offers five concentrations that enable students to specialize within their degree and prepare for a variety of career paths in human services. In addition to selecting one of five concentrations, students have the opportunity to earn the Gerontology Interdisciplinary Minor (http://catalog.colostate.edu/general-catalog/university-wide-programs/interdisciplinary-studies/gerontology-interdisciplinary-minor/), work toward Director Qualifications in early childhood settings, or apply to the Major in Early Childhood Education. The HDFS department is committed to promoting the success and well-being of students from heterogeneous backgrounds and experiences.

Learning Outcomes

Students will demonstrate:

- Content knowledge and understanding of theory, research, and practice relevant to optimizing the development, health, and well-being of individuals and families across the lifespan in the context of the larger social environment.
- Effective written and oral communication skills appropriate to the field of human development and family studies.
- The ability to access, critically evaluate, and apply multiple forms of information related to individuals and families.
- Professional and leadership skills with individuals and families, including ethical and culturally sensitive conduct.

Potential Occupations

Graduates with a major in HDFS are prepared to work in a range of human service sector settings including youth services organizations; early childhood, elementary, adolescent, and parent education programs; health-care settings; juvenile and adult corrections and criminal justice; family and community services; and programs serving older adults, including long-term care facilities. HDFS graduates are also well prepared to pursue graduate studies in mental health, behavioral and social sciences, education, health and medicine, policy and public health, and other professional programs. Students interested in teaching human development and family studies content at the secondary level should explore the interdepartmental Major in Family and Consumer Sciences, Family and Consumer Sciences Education Concentration.

Some examples of career opportunities students may pursue with a bachelor’s degree in HDFS include, but are not limited to: early childhood administrator and teacher, adult recreation programmer, administrator in adult and aging facilities, career development specialist, family services specialist, human development specialist, adult education teacher, human resources coordinator, youth agency administrator, community outreach worker, women’s program administrator, youth intervention and prevention program administrator, youth employment, training, and development specialist, parent educator, children-family educator, child protection worker, family assistance worker, program administrator, public relations specialist, student affairs professional, youth services worker, case manager, nonprofit agency administrator, and residential center manager.

To help guide students in career planning, there are five concentrations within the Major in Human Development and Family Studies. The HDFS program of study consists of the HDFS foundational courses, which are required for all students regardless of concentration, 15 credits selected from the list of courses within students’ chosen concentration, and additional electives to reach the minimum of 120 credits required for graduation. Students must declare at least one concentration and may declare up to two concentrations in the HDFS major. The declared concentration(s) are listed on the students’ transcripts and thus indicate specialized training within the HDFS degree program.

Human Development and Family Studies Concentration

The Human Development and Family Studies concentration is a general concentration available to HDFS majors who do not choose one of the more specific concentrations. This general concentration is an excellent choice for students who are interested in a lifespan or more general focus in HDFS and are not seeking the specialized training offered in the other four concentrations. Students choosing this concentration will be preparing to enter a variety of careers or graduate programs, as outlined above. The curriculum includes primarily HDFS, psychology, and social work courses as well as selected courses from other disciplines for a well-rounded and robust education in human development and family studies. By selecting this concentration, students have an opportunity to participate in a variety of experiential learning courses and internship options as they explore and prepare for their career path and additional credentialing options. Please note that the HDFS general concentration cannot be paired with one of the other concentrations because of the more general focus, and does not appear on students’ transcripts.

Early Childhood Professions Concentration

Courses in the Early Childhood Professions concentration prepare students for careers in early childhood education as well as professional...
work with children across a variety of settings, including working with children with disabilities, in healthcare settings, and community agencies. This concentration focuses on early childhood development from birth to eight years old and therefore is an ideal choice for first and second year HDFS majors who plan to apply to the competitive on-campus Major in Early Childhood Education during their sophomore year. Additionally, this concentration is the preferred choice for students interested in early childhood education careers that do not require teacher licensure, for students who will pursue a graduate degree and licensure in childhood education, and those interested in combining the concentration with another concentration in pre-health, prevention, and intervention sciences, or leadership and entrepreneurial professions. Students interested in working with children with special needs, those seeking director qualifications in early childhood education, and those seeking other relevant credentials would also benefit from choosing this concentration. The curriculum incorporates courses from several disciplines that focus on early child development, education, diversity, and professional skills.

**Pre-Health Professions Concentration**

Many students pursuing an HDFS degree plan to apply to graduate or professional programs in a variety of health professions. The Pre-Health Professions concentration prepares students for these careers and supports their goals of obtaining graduate and additional professional training. Some of the careers students in this concentration pursue are nurse, dentist, occupational therapist, physical therapist, optometrist, pharmacist, veterinarian, allied health practitioner, anesthesiologist assistant, child life specialist, chiropractor, dentist, medical doctor, music therapist, naturopathic or complementary medicine practitioner, physician’s assistant, podiatrist, public health educator, or speech and language pathologist. The courses within this concentration include a focus on science and are designed to prepare students to work with individuals (and their families) with disabilities, mental and physical illness, or those experiencing death, dying, or grief. In addition, students in this concentration are strongly encouraged to consult with health professions advisers in the Collaborative for Student Achievement (http://studentachievement.colostate.edu/) for specific course (and corresponding course prerequisite) recommendations based on the credentials that they are pursuing, as the prerequisite requirements vary for graduate and professional programs.

**Prevention and Intervention Sciences Concentration**

The Prevention and Intervention Sciences concentration is designed for students who are preparing for careers in the helping and human services professions such as counselors, educators, student affairs professionals, public health and social service providers, as well as for students seeking a research career in human development and family studies or a related field. This concentration offers students specialized training in programming related to promoting individual, family, and community health and wellness through the lifespan. This concentration is an excellent choice for students interested in careers requiring either a bachelor’s degree or additional credentials. Coursework emphasizes evidence-based programs, and students will learn how to design and implement community-based prevention and intervention programs for youth, adults, and families. Students can focus on a specific aspect of the lifespan or choose courses across the lifespan. The course work also serves as an excellent second concentration for students focusing on early childhood, pre-health professions, or leadership and entrepreneurial professions.

**Leadership and Entrepreneurial Professions Concentration**

The Leadership and Entrepreneurial Professions concentration guides students who are preparing for leadership positions in health and human services organizations that promote individual, family, and community well-being. Students in this concentration may intend to work in organizations as directors, managers, or owners. Coursework for this concentration includes classes in the development and practice of leadership skills, professional communication and ethics, and public policy, as well as a variety of business-oriented courses in finance, management, and marketing. This concentration is also appropriate for students preparing for careers in legal services, such as lawyers or politicians, as well as director positions and other leadership positions in the human services sector. For this reason, this concentration serves as an excellent second concentration for students preparing for careers in early childhood, prevention and intervention sciences, or pre-health professions. Students in this concentration may choose to pursue additional credentials in leadership, business, and entrepreneurship.

**Online Degree Program**

The major in Human Development and Family Studies (HDFS) is offered in two formats, both leading to a Bachelor of Science degree. We offer classes to on-campus degree-seeking students and we offer distance students the HDFS degree through CSU Online (http://www.online.colostate.edu/). The major in Human Development and Family Studies offered through CSU Online provides a flexible, convenient, and accessible format for busy, working, or distance students. The online program of study is the same as the on-campus version, is fully accredited, and is indistinguishable on student transcripts and diplomas from the on-campus version. The Gerontology Interdisciplinary Minor (http://catalog.colostate.edu/general-catalog/university-wide-programs/interdisciplinary-studies/gerontology-interdisciplinary-minor/) and courses required to pursue a variety of certifications are also available online.

**Accelerated Program**

The major in Human Development and Family Studies includes an accelerated program option (https://provost.colostate.edu/accelerated-programs/) for students to graduate on a faster schedule. Accelerated Programs typically include 15-16 credits each fall and spring semester for three years, plus 6-9 credits over three summer sessions (https://summer.colostate.edu/acceleratedprograms/). Students who enter CSU with prior credit (AP, IB, transfer, etc.) may use applicable courses to further accelerate their graduation. Visit the Office of the Provost website for additional information about Accelerated Programs (https://provost.colostate.edu/accelerated-programs/).

Major in Human Development and Family Studies, Early Childhood Professions Concentration

The courses in the Early Childhood Professions concentration prepare students for careers in early childhood education as well as professional work with children across a variety of settings, including working with children with disabilities, in healthcare settings, and community agencies. This concentration focuses on early childhood development from birth to eight years old and therefore is an ideal choice for first and second year HDFS majors who plan to apply to the competitive on-campus Major in Early Childhood Education during their sophomore year. Students who successfully complete this program will be prepared to pursue licensure in Colorado. Licensure requirements in other states and U.S. territories may differ. Students are encouraged to work with the department and the professional licensure board in the state in which they intend to pursue licensing to ensure all requirements are satisfactorily met.

Major in Human Development and Family Studies, Human Development and Family Studies Concentration

The Human Development and Family Studies concentration is a general concentration available to HDFS majors who do not choose one of the more specific concentrations. This general concentration is an excellent choice for students who are interested in a lifespan or more general focus in HDFS and are not seeking the specialized training offered in the other four concentrations. Students choosing this concentration will be preparing to enter a variety of careers or graduate programs, as outlined above. The curriculum includes primarily HDFS, psychology, and social work courses as well as selected courses from other disciplines for a well-rounded and robust education in human development and family studies. By selecting this concentration, students have an opportunity
to participate in a variety of experiential learning courses and internship options as they explore and prepare for their career path and additional credentialing options. Please note that the HDFS general concentration cannot be paired with one of the other four concentrations because of the more general focus, and does not appear on students’ transcripts.

A minimum grade of C (2.000) is required in all courses used to satisfy the requirements of the Major in Human Development and Family Studies, Human Development and Family Studies Concentration. Courses used as substitutions also require a minimum grade of C (2.000).

Major in Human Development and Family Studies, Leadership and Entrepreneurial Professions Concentration

The Leadership and Entrepreneurial Professions concentration guides students who are preparing for leadership positions in health and human services organizations that promote individual, family, and community well-being. Students in this concentration may intend to work in organizations as directors, managers, or owners. Coursework for this concentration includes classes in the development and practice of leadership skills, professional communication and ethics, and public policy, as well as a variety of business-oriented courses in finance, management, and marketing. This concentration is also appropriate for students preparing for careers in legal services, such as lawyers or politicians, as well as director positions and other leadership positions in the human services sector. For this reason, this concentration serves as an excellent second concentration for students preparing for careers in early childhood, prevention and intervention sciences, or pre-health professions. Students in this concentration may choose to pursue additional credentials in leadership, business, and entrepreneurship.

Major in Human Development and Family Studies, Pre-Health Professions Concentration

Many students pursuing a degree in Human Development and Family Studies plan to apply to graduate or professional programs in a variety of health professions. The Pre-Health Professions concentration prepares students for these careers and supports their goals of obtaining graduate training. Some of the careers students in this concentration pursue are nurse, dentist, occupational therapist, physical therapist, optometrist, pharmacist, veterinarian, allied health practitioner, anesthesiologist assistant, child life specialist, chiropractor, dentist, medical doctor, music therapist, naturopathic or complementary medicine practitioner, physician’s assistant, podiatrist, public health educator, or speech and language pathologist. The courses within this concentration include a focus on science and are designed to prepare students to work with individuals (and their families) with disabilities, mental and physical illness, or those experiencing death, dying, or grief. In addition, students in this concentration are strongly encouraged to consult with health professions advisors in the Collaborative for Student Achievement (http://studentachievement.colostate.edu/) for the specific course (and corresponding course prerequisite) recommendations based on the credentials that they are pursuing, as the prerequisite requirements vary for graduate and professional programs.

Requirements

Effective Fall 2021

A minimum grade of C (2.000) is required in all courses used to satisfy the requirements of the Major in Human Development and Family Studies, Pre-Health Professions Concentration. Courses used as substitutions also require a minimum grade of C (2.000).

Major in Human Development and Family Studies, Prevention and Intervention Sciences Concentration

The Prevention and Intervention Sciences concentration is designed for students who are preparing for careers in the helping and human services professions such as counselors, educators, student affairs professionals, public health and social service providers, as well as for students seeking a research career in human development and family studies or a related field. This concentration offers students specialized training in programming related to promoting individual, family, and community health and wellness through the lifespan. This concentration is an excellent choice for students interested in careers requiring either a bachelor’s degree or additional credentials. Coursework emphasizes evidence-based programs, and students will learn how to design and implement community-based prevention and intervention programs for youth, adults, and families. Students can focus on a specific aspect of the lifespan or choose courses across the lifespan. The course work also serves as an excellent second concentration to students focusing on early childhood, pre-health professions, or leadership and entrepreneurial professions.

Certificate in Youth Mentoring with Campus Connections

Campus Connections (CC) Youth Mentoring program is a nationally recognized, award winning, high-impact, multidisciplinary, service-learning experience offered for credit through Human Development and Family Studies at CSU. CC is a structured mentoring program that promotes undergraduate student success at CSU and after graduation, particularly for underrepresented groups of students; promotes the resilience and life success of at-risk youth; prepares clinical graduate students for diverse settings; and responds to community initiatives to better serve at-risk youth and their families.

The 9-credit undergraduate certificate in Youth Mentoring with Campus Connections enables students to develop invaluable professional skills, gain significant experience with adolescents, and evolve as leaders. Based on multiple semesters of involvement with CC, many students launch their careers working with youth in education, social services, criminal justice, and other relevant professions. The CC experience often serves as the focus of their graduate school essays and is highlighted during interviews with employers setting them apart from their peers.

Major in Social Work

Social work is distinguished by a tradition of concern for people and their interactions with society. Social work professionals are community problem solvers who intervene in organizational settings, communities, social service agencies, groups, individuals, and families with goals of enhancing well-being and promoting social and economic justice. Most social workers are employed in fields such as child welfare and family services, mental health, medical social work, school social work, corrections, community organization, or advocacy.

The Social Work curriculum focuses on the practical application of social work principles, policies, and practices within human rights and social justice perspectives. Students acquire a professional social work foundation transferable to different settings, population groups, and problem areas. Attention is devoted to understanding the social welfare system in the U.S., and working with individuals, families, and communities to effect the desired change. At the global level, human rights and economic, environmental and social needs are explored through international travel courses. Several practical experiences are required. Students work with an agency participant throughout their sophomore year, and then as seniors, participate in a social work agency internship. International placements may be available. The curriculum also includes a strong liberal arts base in social science research and statistics, arts, humanities, social science, and natural sciences.

CSU students are admitted to the School of Social Work (SSW) when they declare Social Work as a major. Two professional organizations, the National Association of Social Workers (NASW (https://www.socialworkers.org/)) and the Council on Social Work Accreditation (CSWE (https://cswe.org/Home.aspx)) guide social work practice and education. The NASW develops the Code of Ethics (https://www.socialworkers.org/About/Ethics/Code-of-Ethics/Code-of-Ethics-English/) for practicing social workers. The CSWE accredits bachelor's and master's social work education programs in the United States. The BSW program is accredited by CSWE.

Learning Outcomes

Graduating seniors will have demonstrated:

- Skills in conceptualizing and applying knowledge of social welfare policy and services, a systems perspective, theory, community resources, and community policy-making processes and practices.
- Knowledge and mastery of the foundation competencies as required by the CSWE for accreditation of the BSW degree.
- An understanding of the social work code of ethics including mastery of skills in maintaining client confidentiality, establishing professional boundaries, and resolving ethical dilemmas that are presented in case situations.

Potential Occupations

Social Work graduates are employed in a variety of settings including welfare agencies, schools, hospitals, clinics, institutions, community centers, public health, corrections, and group homes. Entry-level job opportunities are plentiful. Graduates should be willing to work with people of all ages and in a multitude of circumstances and settings. Internships are required. Graduates of the BSW program are eligible to apply for advanced standing in graduate programs.

Some examples of career opportunities include, but are not limited to: child welfare worker, adolescent group home counselor, crisis counselor, child protection worker, adult protection worker, geriatric social worker, case manager, nursing home administrator, medical social service counselor, community outreach coordinator, youth program counselor, home health worker, occupational social services worker, foster parent consultant, probation officer, client advocate, victim-witness program counselor, program manager, substance abuse counselor, domestic violence counselor, adoption worker, or international development.

Progression in the Major

Progression in the Major is guided by standards required by both NASW (https://www.socialworkers.org/) and CSWE (https://cswe.org/Home.aspx) to ensure compliance with accreditation standards, and that students meet nationally recognized ethical requirements for their profession.

The NASW (https://www.socialworkers.org/) Code of Ethics (https://www.socialworkers.org/About/Ethics/Code-of-Ethics/Code-of-Ethics-English/) requires that social workers act ethically in their work with clients. It also requires that social workers take action when their colleagues are not acting competently or ethically. The CSWE (https://cswe.org/Home.aspx) requires that social work programs describe the procedures for informing students of the program's criteria for evaluating students' academic and professional performance and that the program has policies and procedures for terminating students' enrollment in the social work program for reasons of academic and professional performance.

To meet the requirements of these professional governing bodies, the School of Social Work (SSW) has developed a Progression in the Major procedure. Progression in the Major is a time in a student's academic career when faculty and students can review each student's fitness for the profession of social work. Prior to enrolling in the 300 level practice
courses (SOWK 340, SOWK 341, SOWK 343), students must apply for Progression in the Major. Approval of the Progression in the Major application is a prerequisite for enrollment in SOWK 340. Generally, students who have 60 or more credits must apply for progression to graduate in the following four semesters. The application for Progression in the Major will be distributed in SOWK 286A and SOWK 286B.

As a professional program, academic performance and fitness to proceed in the SSW program require a minimum grade point average, completion of required course work, and behaviors appropriate to the performance of social work. Problems in student performance may be addressed with the student at any time in the student's academic career in the SSW.

**Student Expectations for Progression:**

- Maintain a minimum GPA of 2.500 in SOWK course work; a grade of C or better in all SOWK course work; 2.000 in all University Core Curriculum (AUCC) course work.
- Demonstrate conduct that complies with the CSU Student Code of Conduct.
- Demonstrate conduct that adheres to the NASW Code of Ethics and social work values in interactions with faculty, peers, the community, organizations, and clients.
- Remain free of criminal convictions while enrolled in the SSW and CSU.
- Refrain from substance use that interferes with performance.
- Demonstrate behavior that prioritizes the welfare of those to whom the student has a responsibility such as clients and coworkers.
- Demonstrate sound judgment, both in work with clients and in regard to oneself, such as seeking professional help for physical and emotional problems that interfere with professional functioning.
- Demonstrate honesty and integrity in work with client systems and in the classroom.

**Review Process**

Concerns regarding a student's application for progression will be reported to the director of the BSW program. Concerns may be identified during the Progression in the Major application review process or at any time before or after progression. Progression applications will be reviewed by the director of the BSW program. Concerns regarding any of the foregoing student expectations will be addressed by the BSW director directly with the student and the student's advisor. Major concerns regarding the student's ability to proceed in the program will be reviewed by the director of the BSW program with the administrative team of the SSW, including but not limited to the director of the SSW. A meeting will then be scheduled for review of the concerns with the student, faculty member(s) involved, the director of the BSW program and the director of SSW. Review of concerns may result in one or more of the following resolutions, through the director of SSW:

- Dismissal or resolution of the expressed concerns.
- A probationary period which includes a remediation contract with the student at address concerns that will be monitored by the BSW program director or designated faculty.
- Dismissal of the student from the Social Work major.
- A report to the CSU Office of Conflict Resolution and Student Conduct Services, in the event the concerns include possible violations of the Student Conduct Code.

Students may appeal these decisions using established university and SSW procedures.

**Practicum and Internship**

Students directly apply classroom knowledge, skills, and social work values through a six-credit supervised practicum, SOWK 286A, and SOWK 286B, in the sophomore year. In this practicum, students are matched with community agencies that require background checks before placement.

In the senior year, students fulfill a 10-credit field placement in a social work agency or program in a community setting. Field placement agencies generally require background checks also. Examples of available field placements include child and public welfare programs, health agencies, schools, adolescent residential care, geriatric centers, and correction programs. For a complete list of field placements, students may visit the Field Education page on the School of Social Work website (https://www.chhs.colostate.edu/ssw/field/). In their field placement and under supervision, students have the opportunity to demonstrate the required CSWE competencies.

Master of Social Work

The Master of Social Work (MSW) degree offered by CSU features a nationally recognized advanced generalist curriculum that is accredited by the Council on Social Work Education (CSWE) (https://www.cswe.org/). Students are prepared for roles as social work practitioners in complex, diverse, and dynamic settings and learn to promote human rights and individual, community, and global health and well-being. The School of Social Work offers different program options for completing the MSW degree.

1. Full Program – This is the standard two-year program, starting every fall, with on-campus and in-person instruction. Students in this program complete three elective courses which enables them to complete one of five graduate certificate programs offered by the School of Social Work if they choose to do so.

2. Advanced Standing – This option is available only to those who have earned a BSW from a program accredited by the Council on Social Work Education within the past seven years. The BSW degree must be granted prior to the beginning of advanced standing classes. Students attend one full year consisting of three semesters, beginning with the summer term. View the Advanced Standing MSW Program schedule (https://www.chhs.colostate.edu/ssw/programs-and-degrees/master-of-social-work/advanced-standing-msw-program/).

3. Part-time Hybrid Learning Options – The School of Social Work also offers a part-time hybrid program and advanced standing option that utilizes online and in-person instruction based at the cohort locations of Denver, Boulder, and Fort Collins. There are 5 in-person weekends for full program students and 3 for Advanced Standing...
students. For additional information please visit the Distance MSW Program website (https://www.chhs.colostate.edu/ssw/programs-and-degrees/master-of-social-work/distance-master-of-social-work-program/).

4. **MSW/MPH Dual Degree** — In partnership with Colorado School of Public Health, the School of Social Work offers a dual degree MSW/MPH program. For information visit the [MSW/MPH website](https://www.chhs.colostate.edu/ssw/programs-and-degrees/master-of-social-work/distance-master-of-social-work-program/).

Students who successfully complete this program are prepared to pursue licensure in Colorado. Licensure requirements in other states and U.S. territories may differ. Students are encouraged to work with the department and the professional licensure board in the state in which they intend to pursue licensing to ensure all requirements are satisfactorily met.

The College of Liberal Arts aims to educate committed and active citizens and to develop in them an understanding of humans, including their history, literature, and art; their social, political, and economic systems; and their relationship to the environment. The College offers courses in the arts, humanities, and social sciences, which constitute the foundation of a liberal arts education.

Undergraduate Programs

Undergraduate majors lead to one of four degrees: Bachelor of Arts, Bachelor of Fine Arts, Bachelor of Music, or Bachelor of Science.

Descriptions of the specific departmental and interdepartmental majors and concentrations in the College of Liberal Arts are located in the following pages. Students should consider simultaneously completing the requirements of a second major or a departmental or interdisciplinary minor, either in the College of Liberal Arts or in another college. With careful planning, numerous combinations are possible within four years of study. The minimum scholastic average acceptable for graduation in any college program is a 2.000 average in all major courses in addition to the university's overall grade point average requirement of 2.000 for CSU courses.

Undergraduate Career Opportunities and Career Counseling (https://www.libarts.colostate.edu/students/undergraduate-majors-minors/)

Graduates from the College of Liberal Arts enter a remarkable variety of careers. Degrees from the College of Liberal Arts prepare students for success in their professional, personal, and civic lives. The skills and dispositions students develop through study in the liberal arts are widely sought. In preparing themselves for future career opportunities students are encouraged to work closely with Academic Support Coordinators, departmental mentors, and career counselors. Through these conversations students will be encouraged to develop resumes, interviewing skills, and articulation of the ways in which their skills will benefit potential employers. Students should also consider participating in internships to gain practical work experience.

Prelaw (https://polisci.colostate.edu/pre-law/)

Clark A, Room 076
(970) 491-5421
Make an appointment by emailing: Gina.Robinson@colostate.edu (gina.robinson@colostate.edu)

Students preparing for law school can choose any major. Law schools seek above-average students with broad educational backgrounds and excellent communication, and analytical skills. Prelaw students, regardless of major, should design a course of study that develops their skills in speaking, writing and analytical capabilities. Law schools require an undergraduate degree for admission. Visit the Department of Political Science (http://politics.colostate.edu/undergraduate/pre-law/) for more information.

Education Abroad (https://www.libarts.colostate.edu/students/education-abroad/)

Because the knowledge of at least one other culture is valuable in understanding our own, students are encouraged to take a semester or longer to study outside of the United States as part of their overall program at CSU. Students interested in education abroad should plan, far in advance, by discussing opportunities with their advisor and by visiting the Office of International Programs (http://educationabroad.colostate.edu) in Laurel Hall.
Graduate Programs (https://www.libarts.colostate.edu/students/graduate-programs/)

A variety of liberal arts advanced degrees are available in the College. Academic degrees offered are Doctor of Philosophy, Master of Arts, Master of Science, Master of Fine Arts, and Master of Music. The last two are generally considered professional degrees.

The College offers three interdisciplinary master's degrees. The Department of Anthropology and Geography (https://anthgr.colostate.edu/graduate-programs/ma-in-anthropology/) offers a master's degree in Anthropology with a specialization in International Development, with courses from across CSU. The Departments of English and Languages, Literatures and Cultures offer a joint master's program in foreign languages and the teaching of English as a second/foreign language. The LEAP Institute for the Arts offers a Master’s in Arts Leadership and Cultural Management in collaboration with the College of Business, the College of Liberal Arts and others, that prepares students for leadership opportunities within and outside of the creative sector. Information on all three degree programs may be obtained from any participating department.

For detailed information about graduate programs, contact individual departments. See also the Graduate and Professional Bulletin.

Major in International Studies

College of Liberal Arts | Interdisciplinary Programs Main Office, Clark A 73
(970) 491-5818
inst.colostate.edu (http://inst.colostate.edu/)

Andrea Duffy, Director

The International Studies major is an interdisciplinary program designed to help students understand the nature of diverse cultures and peoples. There are five concentrations: Asian Studies, European Studies, Global Studies, Latin American Studies, and Middle East and North African Studies. Courses are required in anthropology & geography, political science, economics, history, foreign language, and international studies, with other elective courses chosen from these and many more disciplines across the college and university.

Learning Outcomes

Graduates of the International Studies major will demonstrate that they are competent and capable in:

- Effectively articulating themes of International Studies and related fields in written and oral contexts
- Critically explaining and evaluating global issues
- Applying an interdisciplinary approach to knowledge
- Practicing positive global change

Potential Occupations

Graduates in International Studies apply their education in a wide variety of careers, including those in international business, non-profit organizations, academics, public policy, law, government, city planning, engineering, environmental sustainability and clean energy, information systems, journalism, publishing, education, sales and marketing, management and administration, artistic production, mass media, communications, museums, entertainment, foreign service, and many other areas in need of well-rounded and broadly world-educated people. Many International Studies graduates enter graduate or professional schools for more specialized study in either international studies or one of many other disciplines. To enhance their career opportunities, majors are encouraged to consider participating in paid or volunteer work or internship opportunities, and to study abroad.

Accelerated Program

The major in International Studies includes an accelerated program option for students to graduate on a faster schedule. Accelerated Programs typically include 15-16 credits each fall and spring semester for three years, plus 6-9 credits over three summer sessions. Students who enter CSU with prior credit (AP, IB, transfer, etc.) may use applicable courses to further accelerate their graduation. Visit the Office of the Provost website for additional information about Accelerated Programs.
