Minor in Applied Environmental Policy Analysis

The minor in Applied Environmental Policy Analysis will provide students with a rigorous and in-depth study of the public sector environment, practice, and methods for analyzing and developing policy. Each course will also have the environment as a focus in the material, exams, and assignments. At the end of the minor, students will be able to recall and explain the basic rationales for public policies, apply rigorous research methods for evaluating policy, and integrate the elements of theory, methods, problem structuring, ethics, analysis and argumentation to generate reports useable in government and nonprofit management. The minor is appropriate for practicing professionals and current
undergraduate students interested in expanding their applied evaluation skills and environmental policy expertise.

For further information on adding Applied Environmental Policy Analysis as a minor, please contact Kate Sherman at 970-491-5156 or visit Clark C346.

Requirements
Effective Spring 2014

Students must satisfactorily complete the total credits required for the minor. Minors and interdisciplinary minors require 12 or more upper-division (300- to 400-level) credits.

Additional coursework may be required due to prerequisites.

Students must complete each course in the minor with a grade of C or better.

Major in Sociology

Sociology is the study of social life. It focuses on the interaction between human groups and societal institutions, from social relationships within family units in preindustrial cultures to those within large, bureaucratic institutions in major industrialized nations. As one of the largest and most diverse departments on campus, we pride ourselves on celebrating our many backgrounds, experiences, and different ways of thinking. What binds us together is the desire to make the world a better place by understanding how society works and helping solve problems.

Sociology majors have many opportunities to pursue broad and diverse ranges of interest. Students gain a sense of social perspective, an understanding of human affairs, an ability to think critically and perform research, and a capacity to write well. The curriculum includes general courses in the arts and humanities and the social sciences along with sociology course work. A generous selection of electives allows students to major or minor in a complementary discipline. A Sociology major also may enroll in one of the interdisciplinary minors, such as Latin American and Caribbean Studies, Religious Studies, or Women's and Gender Studies.

Learning Outcomes

Upon completion of the program students will be able to:

- Critique individualistic explanations of social phenomena by locating them within broader societal patterns. They will demonstrate their understanding of sociological concepts and theories, and apply them to better understand, evaluate, and foster social change in real-world settings.
- Formulate research questions and select the appropriate sociological research methodologies to answer them. They will apply this knowledge to collect and analyze quantitative and qualitative data as well as evaluate information they encounter in scholarly sources as well as from a variety of media sources from their everyday lives.
- Analyze the links between individuals, societies, and systems with a focus on describing the ways gender, race, class and other intersecting structures of power produce social inequalities. They will demonstrate their understanding of these relationships by examining the effects of social inequalities as well as evaluating actions, policies, and programs that can prevent or ameliorate them.
- Express sociological ideas clearly and effectively in written and oral contexts to a variety of audiences.
- Think critically by engaging in teamwork where they negotiate different perspectives thereby demonstrating an understanding of the complexity of the social world.
- Describe how their training as sociologists, academic experiences, and department mentoring provide them with a foundation to critically examine the social world and their own lives in a way that is relevant to their own career and personal pathway.

Major in Sociology, Criminology and Criminal Justice Concentration

The Criminology and Criminal Justice concentration trains students to view issues of crime, victimization, and justice through a sociological lens. A sociological perspective on these issues focuses our attention to the social aspects of crime, law, and deviance including understanding societal factors that contribute to crime, effective and innovative programmatic approaches to prevent or control crime, the unintended consequences of our system for marginalized communities, and the role of research in creating effective policy. Our undergraduate program is designed to provide students with a strong foundation in research methods, data collection, analysis, and theory, which are all essential skills for those interested in careers associated with law, justice, or advocacy—all professional paths for which this concentration prepares students well.

Major in Sociology, Environmental Sociology Concentration

The Environmental Sociology concentration takes sociology’s long established disciplinary orientation to the world and applies it to the study of nature-society relations. Sociology is about people, institutions, and behaviors. It is about social interactions and social structures. The task of the sociologist, therefore, is to stand back from common sense views of the world and understand the structure and processes of a society as a whole, including global societies. Environmental sociology is about translating these tasks into analysis and action around environmental issues. Some of the pressing contemporary environmental issues to which environmental sociology can be applied are: transboundary pollution, climate change, biodiversity loss, and water and soil degradation. Students will find the concentration helpful in preparing them for a growing number of jobs that have a focus in environmentally related matters.

**Major in Sociology, General Sociology Concentration**

A concentration in General Sociology provides students with an opportunity to dig deep into a rich liberal arts education and develop a deep understanding of the nature and dynamics of social life. Sociology is unique because we study a diverse array of phenomenon including the environment, the criminal justice system, religion, class inequality, social policy, and politics. Students who major in this concentration have a lot of flexibility in what they choose to study and can take courses across these topical areas. They also develop a strong skill set in research methods. Because of this rich academic experience, sociology prepares students for a wide variety of jobs upon graduation including researchers, counselors, policy analysts, managers, criminal justice personnel, as well as strong preparation for graduate or law school.

**Requirements**

**Effective Fall 2020**

Each course used to satisfy requirements of the concentration requires a minimum grade of C (2.000), i.e. all SOC courses, STAT 2**, and each course taken to satisfy the Social and Behavioral Sciences electives.

**Interdisciplinary Minor**
Interdisciplinary Minor in Conservation Biology

For a complete list of departmental program offerings (including certificates), see individual department catalog pages.

**College-Wide Graduate Programs**

**Graduate Certificate**
Certificate in Sustainable Military Lands Management

The College offers studies and professional training in the management, administration, and scientific investigation of renewable and nonrenewable natural resources. Programs include the study of every component of natural systems with particular emphasis on fish, forests, minerals, range, watershed, wildlife, and outdoor recreation areas. Graduate areas of emphasis also include ecosystems and greenhouse gas management.

The Natural Resource Ecology Laboratory, housed in the College, is devoted to research and training in ecosystem science and management.

The College also houses the Center for Environmental Management of Military Lands, CEMML, (http://www.cemml.colostate.edu/) which is a team of environmental professionals experienced in the conservation and sustainable management of natural and cultural resources on Department of Defense lands.

**College Programs**

**Undergraduate Majors**
The scope of the College's programs is more broadly based than most natural resources schools. There are ten undergraduate degree programs, most with specialized concentrations or designated areas of further study. Undergraduate majors in all five departments lead to the Bachelor of Science degree, which requires a minimum of 120 credits. A minimum of 42 credits in upper division courses is required for all majors.

**Field Training Programs**
Most undergraduate majors require the completion of a four or five-week summer field training program (five or six credits) before their junior or senior year. Summer field instruction is given at the CSU Mountain Campus (http://mountaincampus.colostate.edu/) campus, 55 miles west of Fort Collins, and the geosciences department offers a summer field course in northern New Mexico and southern Colorado.

During interim or summer periods, some majors devote several weeks to advanced field training programs off campus. Students taking advanced ROTC should arrange their schedules with their advisors in their junior year to avoid conflicts during senior spring semester. It is recommended for all majors, and required for some, that students have a minimum of one summer of field experience before graduation.

**International Education**
International resources management is an increasingly important concern of the Warner College of Natural Resources. It is desirable that students in the College have opportunities to study abroad, just as students from abroad are encouraged to study here. CSU has agreements covering study abroad opportunities with institutions throughout the world. Students may complete one or two semesters of resources management education abroad. Students interested in studying abroad should plan far in advance by discussing opportunities with their academic advisor and by visiting the Office of International Programs (http://international.colostate.edu) in Laurel Hall.

**Graduate Programs**
Master of Science and Doctor of Philosophy degree programs are offered in each department. Four professional master's degrees are offered by departments in the college: the Master of Fish, Wildlife, and Conservation Biology, the Master of Natural Resources Stewardship, the Master of Tourism Management and the Professional Science Master's in Ecosystem Science and Sustainability. Descriptions of the various graduate programs may be found in the Graduate and Professional Bulletin or on the departmental websites.

**Admissions Information**
Contact: Jake Aglietti, Warner College of Natural Resources Recruitment and Engagement Coordinator
(970) 491-4994
Jake.aglietti@colostate.edu

**For High School Graduates**
High school students are advised to take all the English, science, and mathematics courses possible to prepare for college-level work in natural resources.

**Limitation on Transfer of Credits**
Students planning to attend another college or community college prior to enrolling at CSU should follow the freshman program for their chosen major as closely as possible. To assure that they have the opportunity to complete all degree requirements in four years, they should plan to transfer to CSU no later than the beginning of their junior year. Credits which transfer but are not equivalent to specific curriculum requirements may be used as elective credits.

**Transfer Students**
Students are required to choose a major when enrolling. Transfer students, therefore, should follow the departmental curriculum closely. Check the individual major and concentration for specific courses.

**Graduate Certificate in Sustainable Military Lands Management**
The Graduate Certificate in Sustainable Military Lands Management at CSU is designed to enhance the knowledge and skills of current practitioners and managers, as well as new professionals interested in applying their education and background to the management of military lands. The knowledge and skill sets are transferable to professionals in a wide array of federal and state land management agencies. This online program is the first and only program of its kind in the United States.

**Effective Fall 2017**
Additional coursework may be required due to prerequisites.

**Minor in Diversity and Inclusion in Natural Resources**

To get more information about this minor or to officially declare it, please visit warnercnr.colostate.edu/diversity-and-inclusion-in-natural-resources-minor/ (https://warnercnr.colostate.edu/diversity-and-inclusion-in-natural-resources-minor/)

This minor embraces human diversity and inclusion in natural resources fields, through exploration of how complex and important aspects of diversity serve to shape natural resources and our environment in our modern era. The minor serves students already passionate about natural resources through an exploration of counter-narratives not often thoroughly discussed in seminal works of natural resource history. It provides for a critical examination of historical and current relationships between human diversity, natural resources, and the environment. Students will develop an understanding of the importance of, and types of, diversity in human-environment interactions; how this diversity contributes to vulnerability and/or resilience to environmental change; and the barriers and opportunities for recognizing and protecting human diversity in the context of natural resource conservation and management. The curriculum provides students with the knowledge and skills needed to address diversity and inclusion issues within the natural resource disciplines represented in the Warner College. This includes proposing solutions to environmental injustices, facilitating intercultural environmental communication, integrating multicultural perspectives in assessment of natural resource issues and development of policy and management solutions, and cultivating a deeper understanding and respect for diverse ways of knowing and experiencing the environment.

**Requirements**

**Effective Fall 2021**

Students must satisfactorily complete the total credits required for the minor. Minors require 12 or more upper-division (300- to 400-level) credits.

Additional coursework may be required due to prerequisites.

Major in Ecosystem Science and Sustainability

The major in Ecosystem Science and Sustainability provides a strong scientific foundation in ecosystem ecology integrated with a broad knowledge of the cultural, social, economic, and political issues that are shaping the issue of sustainability. Students in the major learn to integrate science into real-world decision making, with the goal of developing sustainable strategies to maintain ecosystem services around the globe. We provide students with a broad base of experiential and collaborative learning opportunities, opportunities for undergraduate research, and the latest scientific knowledge about sustainability science and how organisms interact with their environments to form complex ecosystems. Opportunities for research, internships, practical and group-based learning, and field experiences in the beautiful Rocky Mountains and around the world, combined with an outstanding classroom education, build a solid foundation for applying sustainable resource management principles.

Learning Outcomes

Students in the major learn:

- How to use natural resources and implement solutions in a sustainable way.
- About environmental change at local to global scales.
- The amazing connections between different earth system components, founded in a systems thinking approach.
- How to conduct research or field work in a variety of settings addressing questions important to sustainability.

Potential Occupations

Completion of the undergraduate degree qualifies students for a wide variety of careers related to sustainability and natural resource science. Examples of possible careers include: sustainability coordinator, ecologist, environmental educator, invasive species specialist, biological science technician, climate change scientist, natural resource specialist, or corporate environmental consultant. Students completing the undergraduate degree in Ecosystem Science and Sustainability will also be well prepared to succeed in graduate education in a variety of disciplines.

Major in Watershed Science

Why Watershed Science at CSU?
Sustainable management of freshwater resources is an increasingly important and complex challenge in Colorado and worldwide, and we need scientists who can address complex water issues. The Watershed Science program focuses on how water moves through the landscape, what factors affect its quality, and how to manage water resources. Students begin their program by building a strong foundation in the physical and natural sciences in preparation for upper-division coursework in land-use hydrology, snow hydrology, water quality, and watershed problem analysis. Students gain hands-on experience with water measurements outside and in the lab, and build technical and writing skills to prepare them for careers in hydrology and water resources.

Learning Outcomes
Students will demonstrate:

• An understanding of the key concepts in watershed science including surface and subsurface hydrology and water quality.
• An understanding of land use effects on fresh water resources.

Potential Occupations
The B.S. in Watershed Science qualifies students for a wide variety of careers in hydrology and water resources management. Examples include: watershed scientist, hydrologist, water quality analyst, watershed manager, environmental consultant, watershed use specialist, and water conservation specialist. Employment opportunities for graduates are found in consulting firms, governmental agencies, international development and resource management agencies, non-governmental organizations, and private industry. Graduates are also well positioned for advanced science degrees. The B.S. curriculum includes all of the requirements for graduates to meet the U.S. governmental hydrologist certification.

Minor in Watershed Science

The Watershed Science minor addresses land use hydrology and sustainable watersheds through a set of core courses and engages students in experiential learning in a watershed field course. The program offers a broad and flexible selection of additional coursework options that emphasize physical, biogeochemical, and societal aspects of water resources and watershed management. Students can select the combination of courses that best fits their interests and complements their major.

Requirements

Effective Fall 2021

Students must satisfactorily complete the total credits required for the minor. Minors and interdisciplinary minors require 12 or more upper-division (300- to 400-level) credits.

Additional coursework may be required due to prerequisites.

Graduate Certificate in Carbon Management

A workforce needs-assessment survey carried out by the Greenhouse Gas Management Institute concluded US organizations are ill-prepared for emerging regulatory emissions reporting, carbon markets are not “up-to-snuff”, and competency concerns loom with expansion of climate programs. A set of recent reports in Nature confirmed that new international agreements will tax the capabilities of nations and organizations to carry out the supporting accounting activities.

The Graduate Certificate in Carbon Management is designed to deliver the latest fundamental knowledge and skills to practicing environmental/sustainability professionals, enabling them to advance their careers by expanding into this emerging area.

The certificate may be completed through traditional, on-campus coursework or through CSU Online (https://www.online.colostate.edu/certificates/carbon-management/).

Effective Fall 2019

Additional coursework may be required due to prerequisites.

Graduate Certificate in Water Resources

The Graduate Certificate in Water Resources is designed to provide college graduates, current practitioners, and new professionals with targeted knowledge and skills to advance their understanding and career mobility related to water resources planning, management, and policy. The certificate emphasizes an understanding of the hydrologic cycle and the physical processes that drive it, how humans adapt water resources to their needs, techniques for sustainable management, the evolution of laws and policies governing water use, and basic spatial and temporal analysis of water data. These skills can be applied by a wide array of natural resource managers as water planning is essential to sound governmental policy and community management. All courses include case studies, geospatial applications, and exercises pertaining to an array of water issues in Colorado and the United States, as well as international examples.

Career opportunities may be found in forests, parks, wildlife refuges, public lands, special-purpose water districts, academia, water resources engineering and consulting firms, nonprofit organizations, and municipal, tribal, county, state, or federal agencies.

Curriculum: Three required courses total, offered through the Department of Ecosystem Science & Sustainability (https://warnercnr.colostate.edu/ess/) and CSU Online (https://www.online.colostate.edu/certificates/water-resources/), geared towards professionals across disciplines. Courses can be taken in any order.

Master of Science in Ecosystem Sustainability, Plan A

Many physical, ecological, and social factors interact to shape the future of our ecosystems and societies. CSU’s innovative Master of Science in Ecosystem Sustainability. Plan A enables students to develop core competencies in ecosystem science—the study of organisms and the environment—and apply that knowledge to address real-world issues. We help develop leaders in sustainability science: a new generation of practitioners able to address complex, integrated social-ecological problems in collaborative partnerships with researchers, resource users, and decision-makers.

Our graduates have the tools to understand complex scientific questions in sustainability and the leadership and collaborative skills required to address current and future issues in sustainability. The program serves as a foundation for a wide range of careers, including academic and scholarly professions, and work in government agencies, non-governmental organizations, and corporate and entrepreneurial environments.

A focus on solutions

Students work at the cutting edge of new research on ecosystem sustainability. Collaborating with some of the world’s leading ecosystem and sustainability scientists, students explore solutions to global problems related to water and natural resources, food supplies, energy, greenhouse gas management, land-use change, climate change, and environmental justice, among others.

What students can expect to gain

During the course of the degree, students will acquire:

- Detailed knowledge of quantitative and qualitative methods
- An understanding of complex ecosystem functioning
- A transdisciplinary understanding of social-ecological processes
- The ability to work in teams across disciplines and with decision-makers, resource users, and team members outside of academia
- The skills to conduct integrated assessments using systems approaches; conceptual, mathematical, geospatial, and statistical models; and innovative collaborative processes
- The ability to apply critical thinking in the development of sustainable systems at local and global scales
- Advanced training in the methods of urban ecology and managing the sustainable cities of the future

Local and Global Relevance

Our graduate community benefits from a highly networked program with close working links to the city governments of Fort Collins, Boulder, and Denver, and to local agencies, farming communities, and non-profits across the Front Range. We work at the highest elevations of the Rockies, in the lowest short grass steppe regions, in cities, and in neighborhoods. Our active research programs are spread around the globe: from northern, eastern, and southern Africa to China, Mongolia, Nepal, Tibet, Honduras, and Mexico.

Ph.D. in Watershed Science

Sustainable management of freshwater resources is an increasingly important and complex challenge in Colorado and worldwide, and we need scientists who can address complex water issues. The watershed science program focuses on how water moves through the landscape, what factors affect its quality, and how to manage water resources. Students in the Ph.D. in Watershed Science program work closely with research scientists in the classroom, laboratory, and field on both basic and applied watershed science research. Students are exposed to cutting-edge field, data analysis, and modeling techniques through flexible programs of study and access to a breadth of water-related courses throughout the university. Students also have opportunities to participate in seminars and field courses.

The Ph.D. in Watershed Science requires 72 credits, most of which are research credits. Coursework includes in-depth classes in the student’s area of research, as well as classes that expand into other disciplines. Each student develops an individualized program of study with the guidance and approval of the student’s graduate committee. Major in Fish, Wildlife, and Conservation Biology

Professor Will Clements
Chair of the Undergraduate Major

The Fish, Wildlife, and Conservation Biology major is intended for students interested in understanding wildlife and the habitats in which they live. We offer three concentrations: Conservation Biology, Fisheries and Aquatic Sciences, and Wildlife Biology. The curriculum has a strong foundation in the biological, physical, and social sciences with the focus on solving current and future issues related to conservation and sustainability of wild animals and their habitats. The faculty offers a wide range of expertise with a keen interest in innovative teaching and research methods.

Our program prepares students for professional careers involving fish, wildlife, and conservation that include federal and state agencies, nongovernmental organizations, the private sector, academic institutions, and graduate school. Numerous opportunities exist for students to gain experience through research and internships, including professional and career mentoring and involvement with professional societies to further their studies, practical experience, and career potential. Required natural science courses include general biology, vertebrate biology, botany, calculus, and statistics, while required courses in the major focus on wildlife ecology and conservation, principles of wildlife management, design of wildlife projects, conservation biology, fishery science, and wildlife data collection and analysis.

Required courses in the concentrations, as well as elective courses, explore specific areas of fish, wildlife, and conservation biology. A summer field course at CSU’s mountain campus is required and provides
students with hands-on learning about natural resource ecology and measurements. Additional hands-on opportunities exist in courses and study abroad programs. Along with a strong science foundation, problem solving, communication skills and outreach, are important to resolve difficult issues faced by today’s natural resource professionals.

**Learning Outcomes**

Students will:

- Demonstrate a mastery of ecological concepts and fundamental principles and techniques to manage and conserve fish and wildlife populations, and how they apply to current natural resource management issues
- Demonstrate mathematical, statistical, and study design knowledge and skills required for careers in fishery, wildlife, and conservation biology
- Become effective in oral and written communication about issues related to the environment and natural resources, including as members of multi-disciplinary teams
- Learn approaches to solving complex natural resource management issues, including planning, organizing, creating, and presenting group projects

**Potential Occupations**

Federal and state agencies that manage natural resources offer most employment opportunities in fish, wildlife, and conservation biology. Key federal agencies include the U.S. Forest Service, Fish and Wildlife Service, Bureau of Land Management, Geological Survey, National Park Service, Environmental Protection Agency, Bureau of Reclamation, National Marine Fisheries Service, and state departments of wildlife and natural resources. Non-governmental organizations, e.g., The Nature Conservancy, private companies, and environmental consultants also offer excellent opportunities. Participation in internships, independent study/research, volunteer activities, or cooperative education opportunities is highly recommended to enhance practical training and development. Undergraduates who go on for graduate-level studies can attain more advanced positions with the possibility of rising to top professional levels, e.g., researchers and teachers in academic institutions and scientists at natural resource agencies. Our degree is also excellent preparation for veterinary school.

Examples of career opportunities include, but are not limited to: fishery/wildlife/conservation biologist, ecologist, wildlife refuge or natural resource manager, environmental consultant, research scientist, and educator. Within these areas, a variety of specializations are possible including fish, wildlife, and conservation education and interpretation; endangered species; habitat enhancement and restoration; administration; research; law enforcement, fish and wildlife population assessment, statistical analyst, and human-wildlife conflicts.

**Concentrations**

- Conservation Biology Concentration
- Fisheries and Aquatic Sciences Concentration
- Wildlife Biology Concentration

**Major in Fish, Wildlife, and Conservation Biology, Conservation Biology Concentration**

The Conservation Biology concentration focuses on understanding the ecological processes necessary to conserve biological diversity, with an emphasis on fish and wildlife species and their habitats.

**Requirements**

**Effective Spring 2020**

A minimum grade of C (2.000) is required in all biological, mathematical/statistical, physical science, fish, wildlife, and conservation biology and natural resource courses used to meet graduation requirements for the fish, wildlife, and conservation biology major. The minimum applies to courses taken as substitutions for meeting these requirements.

Elective7

Total Credits 24-27
Program Total Credits: 120

1 Students taking this biology selection should choose a botany-related course in the department elective options to meet the botany/plant course requirements for certain federal positions related to wildlife, fisheries, and/or conservation biology.
2 Students may need to obtain a registration override from the appropriate department to take this course.
3 Students in the Honors Track 1 program must take HONR 499.
4 FW 300 and FW 301 count together as one selection in this choice.
5 Restricted to FW subject code, department travel abroad courses, taught by FWCB faculty. No transfer or substitute courses will be accepted.
6 Guided electives are courses intended to expand a student’s depth and breadth in wildlife biology and include any 300- or 400-level regular course with a BC, BMS, BSPM, BZ, CHEM, ESS, F, FW, GES, MATH, MIP, NR, NRRT, PH, RS, SOC, ST, or WR subject code (excluding courses ending in -80 to -99); SOC 240; other courses with prior approval by department and advisor. Courses may not double-count as Guided Electives and for other requirements in the major.
7 Select enough elective credits to bring the program total to a minimum of 120 credits, of which at least 42 must be upper-division (300- to 400-level).

Major Completion Map
Distinctive Requirements for Degree Program:
The curriculum for the Fish, Wildlife and Conservation Biology major – Conservation Biology concentration assumes students enter college prepared to take calculus. Students who have not met the prerequisites for calculus, will be required to successfully complete the prerequisites in their first year. A minimum grade of C (2.000) is required in all biological, mathematical / statistical, physical science, fish, wildlife, and conservation biology, and natural resources courses used to meet graduation requirements for the fish, wildlife, and conservation biology major. The minimum applies to courses taken as substitutions for meeting degree requirements. NR 220 is a summer course in which students reside at CSU’s Mountain Campus. Students must choose ONE of two CHEM + PH paths: (Path A) CHEM 107/108 and PH 121/122 or (Path B) CHEM 111, CHEM 112, CHEM 113, CHEM 114 and PH 110/111. Students must also choose ONE biology group A) BZ 110/111 or B) LIFE 102/LIFE 103.

Major in Fish, Wildlife, and Conservation Biology, Fisheries and Aquatic Sciences Concentration

The Fisheries and Aquatic Sciences concentration allows students to focus on a strong background in basic fishery ecology, management, and conservation, which includes an understanding of the linkages between land and water.

Students choosing the Fisheries and Aquatic Sciences concentration are also required to complete at least 160 hours of paid or non-paid employment related to fishery and aquatic biology.

Requirements

Effective Spring 2020

A minimum grade of C (2.000) is required in all biological, mathematical/statistical, physical science, fish, wildlife, and conservation biology, and natural resource courses used to meet graduation requirements for the fish, wildlife, and conservation biology major. The minimum applies to courses taken as substitutions for meeting these requirements. Students choosing the Fisheries and Aquatic Sciences concentration are also required to complete at least 80 clock hours in an internship experience related to fishery and aquatic biology.

Guided Electives

Guided Electives are courses intended to expand a student’s depth and breadth in wildlife biology and include any 300- or 400-level regular course with a BC, BMS, BSPM, BZ, CHEM, ESS, F, FW, GES, MATH, MIP, NR, NRRT, PH, RS, SOCR, STAT, or WR subject code (excluding courses ending in -80 to -99); SOCR 240; other courses with prior approval by department and advisor. Courses may not double-count as Guided Electives and for other requirements in the major.

Select enough elective credits to bring the program total to 120, of which at least 42 must be upper-division (300- to 400-level).

---

1. Students taking this biology selection should choose a botany-related course in the department elective options to meet botany/plant course requirements for certain federal positions related to wildlife, fisheries, and/or conservation biology.
2. Students will need to obtain a registration override from the appropriate department to take this course.
3. Students in the Honors Track 1 program must take HONR 499.
4. Take 1 credit of FW 487 during the semester in which you are completing the 80 h work experience requirement.
5. Students selecting GR 204/WR 204 only need select three credits. Students selecting one of the geosciences lecture courses (GEOL 120, GEOL 122, GEOL 124) also need to take GEOL 121.
6. Guided Electives are courses intended to expand a student’s depth and breadth in wildlife biology and include any 300- or 400-level regular course with a BC, BMS, BSPM, BZ, CHEM, ESS, F, FW, GES, MATH, MIP, NR, NRRT, PH, RS, SOCR, STAT, or WR subject code (excluding courses ending in -80 to -99); SOCR 240; other courses with prior approval by department and advisor. Courses may not double-count as Guided Electives and for other requirements in the major.
7. Select enough elective credits to bring the program total to 120, of which at least 42 must be upper-division (300- to 400-level).
Sciences concentration assumes students enter college prepared to take calculus. Students who have not met the prerequisites for calculus, will be required to successfully complete the prerequisites in their first year. A minimum grade of C (2.000) is required in all biological, mathematical/ statistical, physical science, fish, wildlife, and conservation biology, and natural resource courses used to meet graduation requirements for the fish, wildlife, and conservation biology major. The minimum applies to courses taken as substitutions for meeting degree requirements. NR 220 is a summer course in which students reside at CSU's Mountain Campus. Students must choose ONE of two CHEM + PH paths: (Path A) CHEM 107/CHEM 108 and PH 121/PH 122 OR (Path B) CHEM 111, CHEM 112, CHEM 113, CHEM 114 and PH 110/PH 111. Students must also choose ONE biology group A) BZ 110/ BZ 111/ BZ 120 or B) LIFE 102/ LIFE 103. Students choosing the Fisheries and Aquatic Sciences concentration are also required to complete at least 80 clock hours in an internship experience related to fishery and aquatic biology. Students must sign up for 1 credit of FW 487 during the semester in which they are completing their internship or work experience requirement.

1 Students taking this biology selection should choose a botany-related course in the department elective options to meet botany/plant course requirements for certain federal positions related to wildlife, fisheries, and/or conservation biology.
2 Students in the Honors Track 1 program must take HONR 499.
3 FW 300 and FW 301 count together as one selection in this choice.
4 Students will need to obtain a registration override from the appropriate department to take this course.
5 Restricted to FW subject code, department travel abroad courses, taught by FWCB faculty. No transfer or substitute courses will be accepted.
6 Guided Electives are courses intended to expand a student’s depth and breadth in wildlife biology and include any 300- or 400-level regular course with a BC, BMS, BSPM, BZ, CHEM, ESS, F, FW, GES, MATH, MIP, NR, NRRT, PH, RS, SOCR, STAT, or WR subject code (excluding courses ending in -80 to -99); SOCR 240; other courses with prior approval by department and advisor. Courses may not double-count as Guided Electives and for other requirements in the major.

**Major Completion Map**

**Distinctive Requirements for Degree Program:** The curriculum for the Fish, Wildlife and Conservation Biology major – Wildlife Biology concentration assumes students enter college prepared to take calculus. Students who have not met the prerequisites for calculus, will be required to successfully complete the prerequisites in their first year. A minimum grade of C (2.000) is required in all biological, mathematical/statistical, physical science, fish, wildlife, and conservation biology, and natural resource courses used to meet graduation requirements for the fish, wildlife, and conservation biology major. The minimum applies to courses taken as substitutions for meeting degree requirements. NR 220 is a summer course in which students reside at CSU's Mountain Campus. Students must choose ONE of two CHEM + PH paths: (Path A) CHEM 107/CHEM 108 and PH 121/PH 122 or (Path B) CHEM 111, CHEM 112, CHEM 113, CHEM 114 and PH 110/PH 111. Students must also choose ONE biology group A) BZ 110/BZ 111/BZ 120 or B) LIFE 102/LIFE 103.
MATH 117, MATH 118, and MATH 124 must be completed by the end of Semester 1.

**Minor in Fishery Biology**

Students majoring in Watershed Science, Forestry, Rangeland Ecology, Zoology, and others may find that a minor in Fishery Biology will increase employment opportunities. The requirements for this minor provide a solid base for work in fishery and aquatic science.

**Requirements**
**Effective Spring 2011**

Students must satisfactorily complete the total credits required for the minor. Minors and interdisciplinary minors require 12 or more upper-division (300- to 400-level) credits.

Additional coursework may be required due to prerequisites.

**Graduate Certificate in Conservation Actions with Lands, Animals, and People**

The course content and applied assignments in the Graduate Certificate in Conservation Actions with Lands, Animals, and People, seek to integrate a holistic approach for sustainable practices with lands, animals, and people in private and public sectors using history, philosophy, policy, management techniques, leadership, education, and communications to improve environmental management, human interactions, and social/environmental justice.

Students gain critical insights into issues, uses, and management of natural resources. Students also gain an understanding and develop skills to review situations and viewpoints that impact public and private debate, and use assignments that may influence decisions in conservation. Upon completion of this certificate, students have the foundation to be stronger leaders, better communicators, and more active members of their communities.

**Effective Fall 2017**

Additional coursework may be required due to prerequisites.

Major in Fire and Emergency Services Administration

The fire and emergency services have a long and proud history of serving their communities with a wide variety of fire protection, prevention, emergency medical, and public education services. The fire and emergency services administrators of the future need advanced administration, management, and leadership skills to address the ever-evolving nature of emergency services. The major prepares students for managerial and officer positions in emergency and fire service organizations.

The major is a degree completion program for students to gain advanced knowledge of emergency service related subjects. The coursework builds upon technical skills and experiences earned in First Responder associate degree programs and on-the-job training. Students will explore key administrative and management areas such as emergency operations, public service budgeting, human resources, prevention, and incident command. The major is focused on the administration and management of First Responder organizations.

All fire and emergency services administration courses are upper-division and offered online via distance education only through the CSU Online (http://www.online.colostate.edu/).

Major in Forest and Rangeland Stewardship

Forests and rangelands are always changing, sometimes very slowly as a result of long-term processes, followed by rapid changes as a result of fires, timber harvesting, or grazing. Rangelands occupy nearly fifty percent of the earth's land surface and consist of natural grasslands, savannas, shrublands, riparian areas, deserts, tundra, and coastal marshes. Sustaining forests and rangelands in the modern world requires managers who understand ecosystem changes, and how forests and rangelands connect to global, ecological, and social systems. State and federal land management agencies, private landowners, consultants, and conservation organizations employ graduates of the Forest and Rangeland Stewardship (FRS) major. The curriculum includes a balanced mix of courses in plant and animal biology, integrated resource management, and the physical sciences. Colorado is an ideal setting for the study of forestry and rangeland ecology and management with shortgrass steppe to the east and high elevation grasslands, forests, woodlands, and riparian areas to the west. Students learn about ecosystem productivity, policy, conservation, and the latest in computer-based management tools. Students also gain an understanding of economics related to recognizing alternatives and analytical and decision-making skills, as well as developing communication, political and interpersonal skills to make their education effective, and contribute to their respective fields fully upon graduation.

The forestry-specific concentrations within the FRS major are accredited by the Society of American Foresters, with curricula meeting the Office of Personnel Management (OPM) requirements for the forestry series (0460) and the forestry technician series (0462). The range-specific concentrations in the FRS major are accredited by the Society of Range Management and students generally meet the OPM requirements for the Rangeland Management Series (0454) and Soil Conservation Series (0457).

Students in the FRS major will gain an understanding of and learn how to manage the animal, soil, and vegetation resources on rangelands or in forests for state and federal land management agencies as well as a variety of private landowners and non-governmental agencies. With a few additional courses, graduates meet OPM requirements for the Ecology Series (0408). Students develop an in-depth understanding of basic plant and animal biology; a basic understanding of the physical sciences as they relate to rangeland ecology; and knowledge of important concepts of ecology and range management.

The FRS major includes summer field courses. All FRS students take a 4-week summer field course at the CSU Mountain Campus for field studies in forest and rangeland ecology and management, wildlife, watershed and human dimensions of natural resources. Students in the forestry concentrations take another 2-week summer field course at the Mountain Campus that focuses on forestry field measurements. Students in the rangeland concentrations take a 1-week summer field course focused on rangeland inventory and assessment that is normally held in shortgrass steppe or foothills rangelands close to Fort Collins.

Careers in forestry and natural resources are exceptionally varied, challenging, and personally satisfying. Opportunities are available in rural and urban settings worldwide. Positions are available in industry, education, consulting, public service, and government agencies. Some examples of career opportunities include, but are not limited to: forest manager, forest/park ranger, environmental policy and conservation consultant, fire fighter/manager, natural resource journalist, naturalist, land use planner, geospatial information systems specialist, forest products business person, researcher/professor.

Examples of career opportunities in range management include, but are not limited to restoration ecologist, rangeland scientist, rangeland management specialist, soil conservationist, soil scientist, rangeland conservationist, plant ecologist, riparian ecologist, ranch manager, researcher, commercial sales and service representative, consultants, mine rehabilitation specialist, real estate/land manager, and international rangeland specialist.

Major in Forest and Rangeland Stewardship, Forest Biology Concentration

The Forest Biology concentration in the Forest and Rangeland Stewardship major provides forestry education that spans the entire range of experiences necessary to understand and manage forests. Curricula include a background in the biological, physical, social, and management sciences, followed by professional forestry courses. The curriculum also focuses on forest biology, forest ecology, natural resource management, and the physical sciences. More specifically, this concentration is intended for students interested in forest ecology and tree biology and it prepares students for graduate studies in forest biological sciences and eventual careers in teaching or research.

### Colorado State University Catalog 1563

#### Major in Forest and Rangeland Stewardship, Forest Fire Science Concentration

The Forest Fire Science concentration in the Forest and Rangeland Stewardship major provides forestry education that spans the entire range of experiences necessary to understand and manage forests. Curricula include a background in the biological, physical, social, and management sciences, followed by professional forestry courses. More specifically, this concentration is the study of fire as an ecological process and its application as a forest management tool. Students learn how to control wildfires and how prescribed fires can enhance habitat, prepare seedbeds, control forest insects and disease, and reduce fuel hazards.

Major in Forest and Rangeland Stewardship, Rangeland Conservation and Management Concentration

The Rangeland Conservation and Management concentration in the Forest and Rangeland Stewardship major emphasizes interdisciplinary study, research, and management of the world’s rangelands. More specifically, this concentration focuses on the stewardship of rangelands for multiple uses. These uses include both consumptive and non-consumptive activities such as recreation, preservation of wildlife habitat, providing for aesthetic beauty, livestock grazing, and ranching.

Major in Natural Resources Management

The goal of the Natural Resources Management major is to provide students with a broad-based understanding of the interconnectedness of social, political, and ecological systems. This knowledge will enable students to design sustainable solutions to address natural resource conservation and management problems. Students will learn about natural resource stewardship in both theory and practice, with an eye toward designing systems that are adaptable and resilient in light of the social and ecological complexity and change that characterize today's challenges. Using an integrative approach, students will learn how to develop local solutions that are sustainable and ethical at larger, global scales. Environmental issues such as land-use change and planning, conservation biology, energy use, climate change, renewable resource management, and citizen engagement in place-based conservation will be addressed. Field measurements and field skills are important components of this major, and students are required to attend a four-week summer field course in ecological investigations and resource management.

Program Total Credits: 120
Specific objectives are to provide each student with:

1. a science-based core curriculum in biological, physical, and social sciences;
2. a broad foundation in natural resources science and environmental management; and
3. specialization in a subject relevant to natural resources management.

The breadth of the major allows students to specialize in a wide range of topics, including conservation biology, geographic information systems, forest management, rangeland ecology, restoration ecology, natural resource policy, recreation resources, watershed management, wildlife management, or other topics related to natural resources management. This specialization is accomplished by coupling the major with a required minor, typically declared by a student’s junior year.

Students are encouraged to participate in internships and obtain related work experience. Participating in seasonal and voluntary work, internships, and cooperative education opportunities will enhance your chances for permanent full-time employment. The department offers numerous opportunities to become engaged in these kinds of endeavors. At the completion of the program, students should have the technical and communication skills that are critical to resolving important natural resource management problems.

**Learning Outcomes**

Students will:

- Demonstrate knowledge of a wide range of natural resource topics spanning ecological, social and physical aspects of wildland ecosystems
- Demonstrate proficiency in an area of specialization through completion of a minor in an area complementary to natural resource management. Some minors that students find well-suited to develop a proficiency are Global Environmental Sustainability, Forestry, Rangeland Ecology, Ecological Restoration, Watershed Science, Conservation Biology, or Environmental Affairs, though there are many additional options
- Be able to apply their broad natural resources knowledge to create sustainable solutions at local, national, and global scales
- Accurately communicate their knowledge of natural resources, both verbally and in written form

**Potential Occupations**

Opportunities are available with a wide array of local, national, and international organizations and institutions involved in natural resource management. Graduates apply their education in science, technology, social science, and policy to solving today's critical natural resource and environmental problems. Positions are found with federal, state, and local government agencies, industry, and education and advocacy organizations. Some natural resource professionals are employed in environmental consulting firms and corporate environmental departments. The nonprofit sector provides a variety of environmentally-related jobs, ranging from science application to policy development, education, and collaborative conservation.

Examples of available career choices include, but are not limited to: natural resource manager; professional forester; land use planner; geographic information system (GIS) or remote sensing specialist; fishery/wildlife manager; environmental policy analyst; environmental advocate; environmental consultant; resources/environmental lawyer (with continued education); youth agency administrator; natural resource communications specialist; law enforcement officer; natural resources/environmental educator; restoration specialist; multiple resource use planner; regulatory compliance enforcement officer.

**Major in Restoration Ecology**

The Major in Restoration Ecology emphasizes interdisciplinary study, research, and restoration of damaged, degraded or destroyed rangelands and forested ecosystems of the world. More specifically, this major focuses on the restoration of rangelands and forests for multiple uses. These uses include both consumptive and non-consumptive activities such as recreation, preservation of wildlife habitat, providing for aesthetic beauty, livestock grazing, and timber production. Forests and rangelands occupy the vast majority of the earth's land surface and Colorado is an ideal setting for the study of restoration ecology with many different types of rangeland and forest ecosystems in close proximity.

Students in this program will gain the important knowledge and skills necessary to restore damaged ecosystems. They will learn how to manipulate soil, water, vegetation and animal resources in order to implement successful restoration for local, state and federal land management agencies as well as for a variety of private entities, landowners and non-governmental agencies. Students develop an in-depth understanding of basic plant and animal biology; a basic understanding of the physical sciences as they relate to restoration ecology; knowledge of important concepts of ecology and natural resources management; an understanding of economics related to evaluating alternatives; and analytical and decision-making skills. Students also develop communication, political and interpersonal skills to make their education effective. Examples of career opportunities include, but are not limited to restoration ecologist, soil conservationist, plant ecologist, riparian ecologist, researcher, commercial sales and service representative, consultants, and mine reclamation specialist.

Minor in Ecological Restoration

The minor in Ecological Restoration allows students in related majors to gain knowledge of the science and art of restoring ecosystems. This background is especially valuable to students who will be working in the various natural resource management fields. Since the prevalence of damaged, degraded or destroyed ecosystems is likely to increase in the future, restoration will be imperative for transforming these lands to once again provide ecosystem services.

To get more information about this minor or to officially declare it, please visit warnercnr.colostate.edu/frs/undergraduate-program/advising/ (https://warnercnr.colostate.edu/frs/undergraduate-program/advising/) to make an appointment with an advisor.

Graduate Certificate in Advanced Silviculture for the Practicing Forester

The Graduate Certificate in Advanced Silviculture for the Practicing Forester provides forestry professionals with advanced contemporary knowledge for making sound, science-based management decisions within an adaptive management context. This online certificate will prepare students with the tools, methods, theories, and tactics to identify, compare, and apply advanced ecological and silvicultural concepts to diverse forest ecosystems, as well as develop, implement, and evaluate silvicultural solutions to help forests and communities adapt to a changing climate. The program is comprised of a set of six core courses (12 credits total).

**Major in Geology**

The Major in Geology provides a rigorous academic and practical basis for diverse professional geosciences and other careers that include private and public sector water, energy, mineral and other natural resources, geologic hazards, resources and environmental management, and education. The major also provides a quantitative science and general education preparation for graduate studies, including hydrology, geophysics, environmental geology, economic geology, resources management, public policy, and many other areas.

The Geology curriculum encompasses a strong geosciences education within the broader framework of a liberal education. Emphasis is placed on integrating field studies in the Colorado Rocky Mountains and elsewhere with extensive on-campus classroom and laboratory work. In addition to obtaining a thorough knowledge of geosciences, students complete courses in mathematics, physical sciences, communications, and the liberal arts to develop effective quantitative, decision making, and communications skills. Four concentrations are offered to allow focus on specialized career interests: Geology, Environmental Geology, Geophysics, and Hydrogeology.

**Learning Outcomes**

Students will demonstrate:

- A solid foundation in the physical sciences and broad understanding of geological processes
- Application of field and classroom scientific reasoning skills to data analysis and problem solving in the geosciences, both individually and in teams
- An awareness of sociopolitical, economic factors, and ethical practices and standards relevant to professional careers in geosciences

**Potential Occupations**

Many opportunities exist for geology graduates in the private and public sectors within a wide range of societally important and satisfying careers. Environmental management, energy resources, water resource and management, construction services, mining, power generation, computer software, and many other industries employ geoscientists in exploration, development, production, communications, building, management, and research. Federal and state agencies employ geoscientists for resource mapping and assessment, oil-gas-coal-groundwater-geothermal resource evaluation and development, resource and environmental water studies, leasing and conservation, resource restoration and rehabilitation, hazards assessment and mitigation, regulatory activities, national defense, and basic and applied research.

State and local governments employ geoscientists for geologic and soils mapping and resource management, natural resources, hazards evaluation and mitigation, public information activities, consulting, management, and communications. Environmental, engineering, and water resources firms further employ geoscientists for mapping, restoration and rehabilitation planning, monitoring and evaluation of geologic and built environment hazards, and in site feasibility evaluation and implementation of construction projects, water management and reuse evaluation, groundwater pollution assessment and remediation, and contaminant prevention and treatment. Schools, colleges, universities, national laboratories, and private research firms employ geoscientists in a variety of teaching, research, and administrative positions.

Participation in internships, volunteer activities, collaborative team-building activities, professional societies, education, and public outreach and engagement are highly encouraged and supported by the department via faculty, staff, and alumni mentoring to enhance training and career opportunities. Graduates who go on to pursue advanced degrees acquire a strong disciplinary base for diverse areas of graduate study, including environmental studies, energy, seismology, hydrology, meteorology, oceanography, and the space sciences. Geoscientists with advanced degrees can often more effectively attain management-level and research positions. Careers include, but are not limited to: instructor, professor, environmental or geological entrepreneur or consultant, exploration professional geologist, petroleum geologist, environmental geologist, geophysicist, hydrologist, mining geologist, oceanographer, production geologist, researcher, resource evaluator, geobiologist, or seismologist.

With additional training and diversification, geosciences graduates may pursue associated career directions in business, law, medicine, public policy, and other diverse professional fields. By obtaining teaching,
certification, graduates can become primary and secondary educators in geosciences.

Concentrations

- Geology Concentration
- Geophysics Concentration
- Hydrogeology Concentration

Major in Geology, Environmental Geology Concentration

Environmental Geology concentration students develop expertise in surface and shallow subsurface processes that shape the Earth and provide critical soil and water resources and services for human society and the natural world. Graduates will be prepared for careers that address environmental implications of geological process and human activities. The curriculum emphasizes the fundamentals of geology, surface and shallow subsurface processes, field-based research methodologies and technologies, and environmental geosciences. The concentration empowers students to pursue positions with corporations and public, private, and nonprofit organizations that address environmental/natural resource management issues, regulatory agency activities, hazard identification and mitigation, land use, and support research that informs natural resource policy and decision making to advance sound stewardship. The curriculum provides a strong foundation for graduate studies in the many fields of geosciences and environmental science.

**Major in Geology, Geology Concentration**

The Geology concentration provides a comprehensive undergraduate education in geoscience, emphasizing a hands-on and field-oriented approach that is well-suited to professional careers in the energy, water, mining and other resources industries, government agencies, consulting, resource management, and the many other fields that employ geologists. The Geology concentration provides a strong general science background for other diverse careers, including primary and secondary school teaching, science writing, environmental and resource law, and resource and/or hazards specializations within the construction, insurance, land use, securities, and other industries. The Geology concentration additionally provides foundational preparation for graduate education in the many geosciences subdisciplines.

## Major in Geology, Geophysics Concentration

The Geophysics concentration combines a strong foundation in geology with additional depth in geophysics, physics, mathematics, and associated quantitative, data analysis, and computer skills. The concentration provides strong preparation for employment in a wide variety of public- and private-sector geosciences and geotechnical careers, and for graduate education in geophysics, seismology, geodynamics, energy, water, environmental science, space science, and many other disciplines.

Major in Geology, Hydrogeology Concentration

The Hydrogeology concentration provides a rigorous education in geological aspects of surface and subsurface water science, resources and applications, while ensuring that students are well prepared for a variety of geosciences careers. Students will be particularly well prepared for employment in environmental, water resource, geotechnical, and groundwater disciplines, and for public- or private-sector careers managing or assessing water resources. The concentration provides strong preparation for graduate education in hydrogeology and other water science, environmental, and resource disciplines.

Master of Science in Geosciences, Plan A

The Master of Science in Geosciences, Plan A provides best practice preparation for employment in major fields of the geoscience profession. This is the normative working degree for many energy, environmental, natural resource, regulatory, and other professionals. Each graduate student follows a custom-tailored program of coursework and research developed with their advisor and graduate committee. Strengths of the program include diverse scientific specializations, an interdisciplinary approach to addressing earth resource education, professional preparation, global research interests, strong field research, and close student/faculty working relationships.

Faculty in the department advise M.S. students in the wide range of subdisciplines represented within the department, including geophysics, economic geology, environmental geology, geochronology, geodynamics, geomorphology, hydrogeology, igneous and metamorphic petrology, petroleum geology, sedimentology, sedimentary petrology, seismology, paleoclimatology, glaciology, stratigraphy, structural geology, and tectonics. Students work with their advisor and graduate committee to identify a curriculum specific to their academic needs and goals. Prospective students should contact appropriate faculty advisors in the department to discuss their interests and develop a program plan.

Requirements
Effective Fall 2019

A minimum of 30 semester credit hours are required to complete this program.

At least 16 credits must be at the graduate level (500-level or higher).

At least 15 credits in courses numbered 500-581, 600-681, or 700-781 are required and should be selected in consultation with the student’s advisor.

Up to 6 of the 30 credits may be for GEOL 699 Thesis.

With permission of the advisor and committee, 300- or 400-level course credits may be applied to the degree.

Completion and successful oral defense of a thesis is a degree requirement.

Ph.D. in Geosciences

The Department of Geosciences offers a Ph.D. in Geosciences. Faculty in the department advise Ph.D. students in a wide range of subdisciplines that includes geology, seismology, economic geology, environmental geology, glaciology, paleoclimatology, geochemistry, geophysics, geochronology, geodynamics, geomorphology, hydrogeology, igneous and metamorphic petrology, petroleum geology, sedimentology, sedimentary petrology, stratigraphy, structural geology, and tectonics. Students work with their advisor and graduate committee to identify a dissertation topic and curriculum specific to their academic needs and goals. Prospective students should contact appropriate faculty advisors in the department to discuss their interests and develop a program plan.

Requirements
Effective Fall 2018

Ph.D. students must complete 72 semester credits beyond those required for the B.S. degree. They must satisfy a breadth requirement by:

Taking a six-credit upper-division or graduate-level course sequence outside of the student’s discipline. Most students will take their breadth requirement courses outside of their department.

At least 10 credits beyond the master’s degree must be earned in regular courses numbered 500-level or above.

Major in Human Dimensions of Natural Resources

The source of many challenges in natural resources involves human behavior, and solutions to those challenges requires innovative problem-solving, a deep understanding of complex issues, and collective action. This major is focused on understanding the social aspects of natural resources, and developing the skills to assess, plan and implement strategies that lead to successful conservation. Curriculum for this major trains students in the areas of communication, leadership, systems thinking, collaboration, conflict management, decision-making, social science research in conservation, and conservation planning and management.

Learning Outcomes

Students will:

• Comprehend the institutions, policies and actors that influence conservation outcomes and historical perspectives
• Understand the role of social science in achieving conservation outcomes
• Recognize and articulate the interdependencies and linkages within social-ecological systems, and how these linkages assist in understanding the drivers, processes and outcomes of environmental issues
• Gain appreciation for the value and benefit in addressing environmental issues through inclusive processes that invite a diversity of perspectives, world views and ways of knowing
• Acquire skills to critically analyze social science research, and examine the role between human dimensions research and environmental decision-making
• Gain skills to effectively engage stakeholders in conservation action, and recognize their personal strengths and limits in influencing others to achieve positive conservation outcomes
• Acquire skills to effectively plan, design and deliver communication campaigns to achieve environmental outcomes
• Comprehend and critically analyze the policies, institutions and actors that influence environmental decision-making at different scales
• Gain the skills to effectively address conservation problems through application of theory, inquiry, planning and related techniques

Potential Occupations

Students are prepared for various positions with local, state and federal land management and natural resource agencies in the United States. Opportunities are also available both domestically and abroad with non-governmental, and nonprofit conservation and development organizations as well as private foundations. Examples of the types of positions include conservation planner/administrator, environmental communication specialist, conservation/environmental educator, nature center coordinator, visitor services manager, public outreach coordinator, public information officer, protected area manager, park/wilderness ranger, communication coordinator, policy liaison, environmental analyst and others.

Program Total Credits: 120

Major in Natural Resource Tourism

Graduates possess technical skills in problem solving, systems planning, integrative team decision making, quantitative analysis, oral and verbal communications, and computer operations. Graduates are familiar with skills useful in a business setting and the historic evolution of environmental conservation. Additionally, graduates develop an appreciation for how their discipline contributes to environmental stewardship and sustainability. Two concentrations are offered – Global Tourism and Natural Resource Tourism.

Learning Outcomes

Students will demonstrate:

- Written and oral communication skills, with a focus on writing skills. Student writing and speaking will embody characteristics that represent attention to high quality communication skills, including substance of the issue addressed, organization of the paper or presentation, mechanics, and evidence.

Accelerated Program

The major in Natural Resource Tourism includes an accelerated program option (https://provost.colostate.edu/accelerated-programs/) for students to graduate on a faster schedule. Accelerated Programs typically include 15-16 credits each fall and spring semester for three years, plus 6-9 credits over two to three summer sessions (https://summer.colostate.edu/acceleratedprograms/). Students who enter CSU with prior credit (AP, IB, transfer, etc.) may use applicable courses...
to further accelerate their graduation. Visit the Office of the Provost website for additional information about Accelerated Programs (https://provost.colostate.edu/accelerated-programs/).

**Potential Occupations**

Graduates primarily work in a variety of private commercial tourism and recreation enterprises. Competition can be intense for full time/permanent positions in highly attractive natural resource locations, although ample opportunities exist to gain experience through seasonal/temporary and volunteer work. Participation in a high quality, pre-approved internship is required for the degree. Graduates who go on for advanced studies can attain more responsible positions with the possibility of rising to top professional levels.

Career opportunities available to graduates in the global and natural resource tourism concentrations include, but are not limited to: retail relations manager; social media planner; convention sales coordinator; marketing/public relations specialist; trip counselor; travel account manager; food and beverage supervisor; small tourism enterprise/ecotourism owner/manager; regional sales director; account executive; director of trail development; tourism planner; travel pricing and demand analyst; concession specialist; marketing/sales manager; conference/meeting/event planner; resort services director; member relations director; purchasing manager; camp and nature center director; tourist information center manager; sustainable energy director.

**Concentrations**

- Global Tourism Concentration
- Natural Resource Tourism Concentration

**Major in Natural Resource Tourism, Global Tourism Concentration**

The Global Tourism concentration is focused on a unique blend of subjects. Business and tourism topics provide students with planning, management, marketing, financial, and entrepreneurship skills essential in the tourism industry. Because sustainable tourism requires a healthy natural environment, the environment is another area of study. Finally, students are provided cross-cultural experience by learning a second language, studying at a university abroad, and participating in an international internship.

The Master of Tourism Management (M.T.M.) is an innovative nine-month master's program that prepares students to advance their career in public, commercial, or nonprofit organizations in the natural resource tourism industry. The MTM emphasizes the combination of tourism, business, and sustainability concepts. This program is applicable for those looking to develop a tourism enterprise, enter the tourism industry, or become more competitive when seeking higher level positions within the industry.

The program includes graduate courses in:

- Applied concepts and skills that guide strategic analysis, decision-making, and management practices for tourism professionals that reflect the interdependence of diverse sectors within the tourism industry
- The social, technological, economic, environmental, and political implications of tourism activities (emphasizing the triple bottom line of sustainable practice) and the impacts on land use and natural resources
- The foundations of sustainable tourism development
- The identification and understanding of international policies, trends, and challenges facing the tourism industry

The M.T.M. program is available on-campus (https://warnercnr.colostate.edu/hdnr/master-tourism-management/) or through CSU Online (https://www.online.colostate.edu/degrees/tourism-management/). Coursework from the graduate certificates in Adventure Tourism (https://www.online.colostate.edu/certificates/adventure-tourism/), Ski Area Management (https://www.online.colostate.edu/certificates/ski-area-management/) or C (https://www.online.colostate.edu/certificates/agritourism-management/) or Communications for Conservation (https://www.online.colostate.edu/certificates/communications-for-conservation/) can be substituted for specific coursework within the M.T.M. program.

All College of Natural Sciences students have the ability to work with an academic advisor to plan the coursework necessary to graduate from CSU. The College of Natural Sciences also provides students with the opportunity to seek specialized career counseling from a career education manager in the CSU Career Center. Our services are offered to all Natural Sciences students and alumni in all aspects of...
their career development. Additionally, pre-health professions advisors are available at the Collaborative for Student Achievement (http://studentachievement.colostate.edu/), located in Canvas Stadium, East Building, 1415 Meridian Ave.

The college provides multiple opportunities for students to become engaged outside the classroom, including science-based student organizations, the Amplify Community (a residential learning community), and undergraduate research opportunities.

**Education Abroad**

Education abroad programs are available to all students in the College of Natural Sciences. Because the knowledge of another culture is valuable in understanding one’s own, students are strongly encouraged to participate in at least one educational experience outside of the United States as part of their overall program at CSU. Students interested in education abroad should plan, well in advance, by discussing opportunities with their academic advisor and by visiting the Education Abroad Office through the Office of International Programs (http://educationabroad.colostate.edu). The Education Abroad office offers information about credit and non-credit opportunities (service-learning/volunteer, research, internships), as well as support prior to and during travel, information about scholarships and financial aid, and specific resources for adult learners & veterans, students with disabilities, and students from diverse economic, educational, ethnic and social backgrounds.

**Graduate Programs**

Faculty and graduate students in the College of Natural Sciences are engaged in cutting-edge research in multiple disciplines and the college is proud of the graduate student education it provides. Master of Science and Doctor of Philosophy degrees are offered by all departments and a Master of Natural Sciences Education is offered through the college. The college also offers Professional Science Master’s in Natural Sciences degrees with specializations in Biological Data Analytics, Microscope Imaging Technology, and Zoo, Aquarium and Animal Shelter Management. For detailed information about graduate degree programs, please consult the appropriate department and see the Graduate and Professional Bulletin.

**Major in Data Science**

Data science is the discovery of knowledge and insight through the analysis of data. As such, it draws on the study of algorithms and their implementation from computer science, the power of abstraction and of geometric and topological formalism from mathematics, and the modeling and analysis of data from statistics. It has emerged as a separate field in response to the avalanche of data from web enabled sensors and instrumentation, mobile devices, web logs and transactions, and the availability of computing power for data storage and analysis. Modern data is challenging not only due to its large scale, but also because it is increasingly heterogeneous and unstructured. Information gleaned from this data none-the-less is revolutionizing diverse areas of human endeavor from health policy to high energy physics.

**Concentrations**

- Computer Science Concentration
- Economics Concentration
- Mathematics Concentration
- Neuroscience Concentration

Major in Data Science, Neuroscience Concentration

Data Science is the discovery of knowledge and insight through the analysis of data. As such, it draws on the study of algorithms and their implementation from Computer Science, the power of abstraction and of geometric and topological formalism from Mathematics, and the modeling and analysis of data from Statistics. It has emerged as a separate field in response to the avalanche of data from web enabled sensors and instrumentation, mobile devices, web logs and transactions, and the availability of computing power for data storage and analysis. Modern data is challenging not only due to its large scale, but also because it is increasingly heterogeneous and unstructured. Information gleaned from this data none-the-less is revolutionizing diverse areas of human endeavor from health policy to high energy physics.

**Distinctive Requirements for Degree Program:**

TO PREPARE FOR FIRST SEMESTER: The curriculum for the Major in Data Science assumes students enter college prepared to begin a year-long calculus sequence (either MATH 155/MATH 255 or MATH 160/MATH 161) in the first semester of their first year. LIFE 102 requires high school chemistry as a prerequisite; CHEM 111 requires Algebra II as a prerequisite (this prerequisite is met by having Algebra II by test credit, transfer credit, or placement out of MATH 117 and MATH 118 on Math Placement Exam).

1 Courses used to satisfy requirements outside this minor cannot count toward completing this minor. If using a course toward major requirements, the student must take a different course for this minor.

Major in Natural Sciences

The Bachelor of Science in Natural Sciences meets the needs of two audiences:

- Students who wish to become high school or junior high/middle school science teachers.
- Students who seek a broad exposure to mathematics and the physical sciences, rather than specialization in one discipline.

Learning Outcomes

Students will demonstrate:

- Skills to critically interpret scientific data.
- Logical and critical thinking.
- The ability to analyze and solve complex problems.
- Strong written and oral communication skills.

Potential Occupations

Graduates with licensure in secondary science education will find a strong demand for high school and junior high/middle school teachers in Colorado and elsewhere in the nation. In addition, these graduates will also have the background required for graduate science education programs.

With proper planning, physical science graduates can meet requirements for professional schools (e.g., medicine or law) or graduate programs in the basic or applied sciences. Internships and volunteer activities can provide practical training and experience.

Secondary Education

The Bachelor of Science in Natural Sciences provides the scientific subject matter, education classes, and the classroom experience required for secondary science education licensure in Colorado.

Concentrations in the Natural Sciences major include: Biology Education, Chemistry Education, Geology Education, and Physics Education.

The program includes science courses in a concentration such as Biology, Geology, Physics, Chemistry; the All-University Core Curriculum and professional classes in the Center for Educator Preparation (CEP) (http://cep.chhs.colostate.edu) program in the School of Education. In addition, the CEP program helps schedule classroom
visits and practica. The experience culminates in a semester of student teaching under the supervision of a master teacher.

Major in Natural Sciences, Physical Science Concentration

The Physical Science concentration begins with two semesters each of calculus, chemistry, and physics, plus a semester of biological science. Students then complete the major by earning two minors selected from Biochemistry, Chemistry, Computer Science, Geology, Mathematics, Statistics, or Physics. Completion of the double minor gives an unusual breadth in the physical sciences. Recent graduates have pursued careers in the sciences. Others use this background as a basis for graduate work and research or for entry into medical or veterinary professional programs.

Major in Biochemistry

As the name suggests, biochemistry links biology and chemistry. Biochemistry is most simply defined as the chemistry of living systems. It is the science that tries to explain how “lifeless” molecules work together to make “living” organisms. The methods of chemistry and molecular biology are used to study the structure and behavior of the complex molecules found in biological materials and the ways these molecules interact to form cells, tissues, and whole organisms. Biochemistry provides the basis for advances in human and veterinary medicine, agriculture, and biotechnology. Biochemists may participate in interdisciplinary research and development projects alongside chemical engineers, biologists, microbiologists, agronomists, physicians, and other professionals. They investigate the molecular mechanisms of such diseases as AIDS, diabetes, cancer, heart disease and stroke, and develop solutions to environmental problems through biotechnology.

The Biochemistry major provides a student with a strong, well-balanced background in the biological, physical, and mathematical sciences. As a Biochemistry major, studies include macromolecular structure and function; cellular biochemistry; metabolism; gene expression, DNA and protein structure, DNA replication and repair; cell organization, communication, growth, aging, and death. Students are also required to take courses in physics, organic chemistry, and statistical measurements and methods used in research. Independent study and internships (typically during the junior and senior years, but could start in the freshman year) provide opportunities for experiential learning and working closely with the faculty, sometimes leading to authorship of original publications.
Learning Outcomes
Students will be able to:

- Describe the basic concepts of chemistry, biology, biochemistry, molecular biology, and cellular biology
- Critically analyze, and present the methods, results, and conclusions of scientific papers in the current biochemical literature, and orally present technical material in a clear and comprehensible form
- Use a variety of laboratory instruments and techniques, interpret experimental results, and design new experiments
- Demonstrate the ability to perform original research in biochemistry and molecular biology

Potential Occupations
Possible career opportunities include, but are not limited to: process research technician, production/quality assurance lab technician, biomedical/pharmaceutical researcher or salesperson, molecular biologist, biophysicist, cytologist, toxicologist, crime scene investigator, industrial hygienist, dairy technologist, environmental analyst, hygienist, chemist, wastewater treatment chemist, food and drug inspector, museum technician, teacher, writer, fisheries biologist, research analyst, and medical or clinical lab technologist. Many biochemistry majors go on to earn higher degrees in graduate school or health care related professional schools, leading to careers in medicine, veterinary medicine, pharmacy, or law.

Concentrations
- ASBMB Concentration (American Society for Biochemistry and Molecular Biology)
- Data Science Concentration
- Health and Medical Sciences Concentration
- Pre-Pharmacy Concentration

Major in Biochemistry, ASBMB Concentration
The American Society for Biochemistry and Molecular Biology (ASBMB) concentration in Biochemistry is composed of a "core" set of courses comprised of 24 credits of primarily upper division coursework (22/24 credits are 400 level), along with a total of 9 "bioscience elective" credits selected from a list provided by the department. This option gives the student 13 “free elective” credits, which they can use to pursue a minor, a double major, and/or other academic interests. Thus, this concentration is designed to provide a broad background in biochemistry and can be tailored to meet the individual needs of specific students. The ASBMB concentration is recommended for students considering teaching and/or research as a career. Students who graduate from this program can state on their resume that they graduated from an “ASBMB program.” If desired, students can take a 1-hour ASBMB exam during the spring semester of their senior year. Students who pass the exam will additionally receive degree certification from ASBMB. Accreditation (and certification) by ASBMB confirms that our undergraduate degree program meets very high standards, and thus will enhance the credentials of our graduating seniors.

Requirements
Effective Fall 2020
A minimum grade of C (2.000) must be earned for BC 493 and all biochemistry (BC) and LIFE subject code lecture and laboratory courses at or above the 200-level required in the biochemistry major.

1 Select from the list of courses in categories 3B-3E (six credits [two courses] must come from 3B; one course each from categories 3C, 3D, and 3E) in the AUCC. Only 3 of the 6 credits required for Arts and Humanities may come from intermediate (L*** 200 and L*** 201) foreign language courses.
2 Select enough elective credits to bring the program total to a minimum of 120 credits, of which at least 42 must be upper-division (300- to 400-level).

**Major Completion Map**

**Distinctive Requirements for Degree Program:**

TO PREPARE FOR FIRST SEMESTER: The curriculum for the Biochemistry major - ASBMB concentration assumes students enter college prepared to begin a year-long calculus sequence (either MATH 155/MATH 255 or MATH 160/MATH 161) in the first semester of their first year. LIFE 102 requires high school chemistry as a prerequisite; CHEM 111 requires Algebra II as a prerequisite (this prerequisite is met by having Algebra II by test credit, transfer credit, or placement out of MATH 117 and MATH 118 on Math Placement Exam).

A minimum grade of C (2.000) must be earned for BC 493 and all biochemistry (BC) and LIFE subject code lecture and laboratory courses at or above the 200-level required in the biochemistry major.

The Data Science concentration in Biochemistry builds on the general biochemistry core set of courses (24 credits of primarily upper division courses) and includes 21 data science specific course credits. This option gives the student 3 “free elective” credits, which they can use to complete either data science elective, bioscience elective, or second semester physics courses. This concentration is designed to provide a solid background in biochemistry, molecular genetics and cell biology, augmented with computer science, mathematics and statistics. The data science concentration is recommended for students interested in a career in life science data analysis. Students who graduate with this concentration obtain the skills necessary for organizing, analyzing and communicating the meaning of massive data sets.

1. Select from the list of courses in categories 3B-3D (six credits [two courses] must come from 3B; one course each from categories 3C and 3D) in the AUCC. Only 3 of the 6 credits required for Arts and Humanities may come from intermediate (L*** 200 and L*** 201) foreign language courses.

2. Select enough elective credits to bring the program total to a minimum of 120 credits, of which at least 42 must be upper-division (300- to 400-level). Students are encouraged to fulfill their 3 free elective credits with additional Data Science electives, Bioscience electives or PH 122/PH 142 Physics II or apply them to a minor.

**Major Completion Map**

A minimum grade of C (2.000) must be earned for BC 493 and all biochemistry (BC) and LIFE subject code lecture and laboratory courses at or above the 200-level required in the biochemistry major.

1. Select from the list of courses in categories 3B-3E (six credits [two courses] must come from 3B; one course each from categories 3C, 3D, and 3E) in the AUCC. Only 3 of the 6 credits required for Arts and Humanities may come from intermediate (L*** 200 and L*** 201) foreign language courses.

2. Select enough elective credits to bring the program total to a minimum of 120 credits, of which at least 42 must be upper-division (300- to 400-level).

**Major Completion Map**

**Distinctive Requirements for Degree Program:**

**TO PREPARE FOR FIRST SEMESTER:** The curriculum for the Biochemistry major - Health and Medical Sciences concentration assumes students enter college prepared to begin a year-long calculus sequence (either MATH 155/MATH 255 or MATH 160/MATH 161) in the first semester of their first year. LIFE 102 requires high school chemistry as a prerequisite; CHEM 111 requires Algebra II as a prerequisite (this prerequisite is met by having Algebra II by test credit, transfer credit, or placement out of MATH 117 and MATH 118 on Math Placement Exam).
A minimum grade of C (2.000) must be earned for BC 493 and all biochemistry (BC) and LIFE subject code lecture and laboratory courses at or above the 200-level required in the biochemistry major.

### Major in Biochemistry, Pre-Pharmacy Concentration

This concentration augments the ASBMB Concentration with additional coursework in physiology, microbiology, immunology, economics and public speaking. This concentration fulfills the prerequisite courses for admission to most pharmacy schools. It is also an appropriate concentration for a career as a medical technician.

### Requirements

**Effective Fall 2019**

A minimum grade of C (2.000) must be earned for BC 493 and all biochemistry (BC) and LIFE subject code lecture and laboratory courses at or above the 200-level required in the biochemistry major.

If students successfully complete an additional 1-credit course, Responsible Conduct in Biochemical Research BC 360, they can state on their resume that they graduated from an "American Society for Biochemistry and Molecular Biology (ASBMB) accredited program."

Further, students also have the option of taking a 1-hour ASBMB exam.

The minor in Biochemistry is valuable to students majoring in any biological or physical science, or in engineering. The minor requires a sound chemistry background, provides fundamental courses in molecular biosciences, and augments the latter with more specialized courses in biochemistry and molecular genetics.

**Requirements**

**Effective Fall 2010**

Students must satisfactorily complete the total credits required for the minor. Minors and interdisciplinary minors require 12 or more upper-division (300- to 400-level) credits.

Additional coursework may be required due to prerequisites.

Major in Biological Science

Biology is the study of all living things—including microscopic bacteria and viruses, plants, and animals, and their relationship to their environments. Biology majors study the structure and function of cells, organ systems and tissues of animals and plants, ecology (the relationship between living things and their environment), animal behavior, genetics/genomics and evolution. They learn about physiology, behavior, genetics and heredity, aquatic systems, microscopic organisms such as bacteria, and techniques for diverse areas ranging from field research to biotechnology. This major provides a solid foundation of understanding the basic biological sciences. It also offers an opportunity to choose an area of emphasis within life sciences that relates to particular career goals (for example: the ecology of organisms, cell and molecular biology, biomedical professions, aquatic biology, marine biology, plant molecular biology for agricultural biotechnology and bioenergy, evolutionary biology, etc.).

Learning Outcomes

In addition to mastery of biological knowledge and skills, students will:

- Interpret scientific data both mathematically and statistically.
- Demonstrate organizational and laboratory skills.
- Define scientific hypotheses and design experiments or observations to test them.
- Work effectively in groups.
- Demonstrate strong writing and oral communication skills.

Potential Occupations

Training in biology prepares students for a wide variety of occupations. Some involve daily interaction within teams; others can be done in relative isolation; some are highly focused, but most require knowledge far beyond the sciences. A degree in biological science offers a broad foundation for professional degrees in nursing, dental, medical or veterinary school, and a number of health professions such as physician’s assistant, physical therapy, occupational therapy, optometry or public health. Graduates often pursue advanced degrees in life sciences to carry out basic research or advance into leadership positions in industry. Participation in internships and/or laboratory research experience is highly recommended and strongly encouraged by the department to enhance practical training and development.

Our biology graduates have gone on to careers as: aquarium, zoo, and museum worker; assistant research scientist; research technician in industry or university laboratories; biology photographer; biotechnologist; brewery laboratory assistant; consumer product researcher; marine bacteriologist, field ecologist; nuclear medicine technician; park naturalist; pharmaceutical researcher or salesperson; public health officer; science librarian; environmental educator, health specialist, or impact specialist; fisheries biologist or conservationist; industrial hygienist; occupational therapist (with a master’s degree); and medical or clinical laboratory technologist.

Combining biology with additional skills can lead to other exciting transdisciplinary careers. Biology and computer science can be linked to the ever-expanding and exciting area of bioinformatics. Biology and writing can be incorporated into a career as a technical writer or science fiction novelist. Biology and visual arts combine in medical and scientific illustration. Biology and other humanities may lead to studies of the history of science or medicine. Work in both biology and philosophy/religion can be incorporated in careers in bioethics. Biology is linked with psychology for the neuroscientist or genetic counselor. Study biology and political science to work in environmental law or be a patent lawyer in biotechnology. Try mixing biology and business to get into hospital administration, small business or biotechnology administration. Specialized master’s degrees are designed for many of these unique career paths.

Concentrations

- Biological Science Concentration
- Botany Concentration

Major in Biological Science, Biological Science Concentration

The curriculum includes a two-semester introductory biology sequence, cell biology, developmental biology, ecology, evolution, and genetics. Required courses in the physical sciences include a minimum of one year in introductory chemistry and in physics (with labs), and at least one course in organic chemistry (with lab), and one in biochemistry. A calculus course and a statistics course are also required. In addition, students choose a selected field of 12 credits in one of the following: anatomy/physiology, aquatic biology, behavioral biology, cellular/molecular and genetic biology, ecology, evolution/genetics, and systematics, microbiology, or integrative organismal biology. There is an additional requirement of one course in two other fields, which assures a broad base of study.

Requirements

Effective Fall 2020

To be qualified for graduation, students in the Biological Science major must have a minimum grade of C- in each of their biological, physical science, and mathematical courses used to meet requirements for the major. This applies to courses taken as substitutions for meeting these requirements. The minimum scholastic average acceptable for graduation is 2.000 computed only for courses attempted at CSU.

**Self-Designed Field**

A student may, with the approval of their advisor and the Biology Curriculum Committee, define their own individual selected field. Students wishing to pursue this option should consult with their advisor to develop a proposal for a self-designed field. The proposal should include a description of the field of interest, the student's reason or rationale for wishing to pursue a self-designed field, and a list of relevant classes (totaling 12 credits) to be completed. To be included, courses should be upper-division classes that are primarily biological in content. Once approved by the advisor, a student's request for a self-designed field must be submitted to the Biology Curriculum Committee for approval. The Curriculum Committee's approval should be obtained before the end of the sophomore year.

1. A minimum of one course must be selected from two additional fields (cannot use courses that were used to fulfill selected field). Courses in additional fields must be at least three credits.

2. Select enough elective credits to bring the program total to a minimum of 120 credits, of which at least 42 must be upper-division (300- to 400-level).

**Major Completion Map**

**Distinctive Requirements for Degree Program:**

TO PREPARE FOR FIRST SEMESTER: The curriculum for the Biological Sciences major - Biological Sciences concentration assumes students enter college prepared to take calculus. Entering students who are not prepared to take calculus will need to fulfill pre-calculus requirements in the first semester. LIFE 102 requires high school chemistry as a prerequisite; CHEM 111 requires Algebra II as a prerequisite (this prerequisite is met by having Algebra II by test credit, transfer credit, or placement out of MATH 117 and MATH 118 on Math Placement Exam). Earned grade of C or better is required in each of their biological, physical science, and mathematical courses used to meet requirements for the major. Semester 4 may have to be adjusted if the student chooses 2 semesters of Organic Chemistry. The selected and additional field must be a minimum of 18 credits. Do not attempt BZ 310 and BZ 350 before Junior year. Do not take BZ 310 and BZ 350 together.

**Major in Biological Science, Botany Concentration**

Botany is the general study of plants and plant-like organisms from microscopic algae to giant redwoods, from mushrooming fungi to flowering angiosperms. Plant anatomy, how plants grow and develop, and how they survive and interrelate within their environments are topics of study. For students who like the outdoors, a career in plant ecology, taxonomy, or forestry might be appealing. Students attracted to the beauty and design of the microscopic world might enjoy a career in plant anatomy or plant developmental biology. Those interested in chemistry might enjoy plant biochemistry, molecular biology, or plant biotechnology. Those intrigued by plant diseases might become plant pathologists and the mathematically oriented might explore systems ecology, genetics, or plant biotechnology.

**Requirements**

**Effective Fall 2015**

To be qualified for graduation, students in the Biological Science major must have a minimum grade of C- in each of their biological, physical science, and mathematical courses used to meet requirements for the major. This applies to courses taken as substitutions for meeting these requirements. The minimum scholastic average acceptable for graduation is 2.000 computed only for courses attempted at CSU.

The botany curriculum begins with a solid foundation in mathematics, the biological sciences, chemistry, organic chemistry, physics, evolution, and genetics. Botany emphasizing terrestrial plant studies including plant systematics, anatomy, and ecology, biochemistry, and earth sciences round out the core. Botany students also take liberal arts and communications courses to give breadth to their education.

Major in Zoology

Zoologists study animals—their origin, behavior, diseases, and life processes. Some experiment with live animals in controlled or natural surroundings while others study the structure and function of animal cells, tissues, and organ systems. Some zoologists go on to study veterinary medicine. Zoologists participate in research that has practical outcomes in farming, medicine, pharmacy, wildlife conservation, and pest control. Zoology encompasses many specialties. At CSU, students may focus on general training in animal biology or choose a concentration in the following areas: animal behavior, development, aquatic biology, ecology (how animals adapt to their environments), genetics and evolution, invertebrate organisms, cellular/molecular biology and physiology, systematics, and morphology of vertebrate organisms.

The curriculum is designed to provide a basic understanding of zoology through a variety of laboratory experiences in combination with the study of basic theories and defining concepts. The program encourages flexibility, strength, and depth. The course work includes a two-semester introductory biology sequence, one course each in invertebrates and vertebrates, and courses in evolution and ecology. Required courses in the physical sciences include a minimum of one year of introductory chemistry and at least one course in organic chemistry, two courses in physics (all with labs) and one in biochemistry. A course each in calculus and statistics is also required. In addition, students select a minimum of 15 credits of Zoology courses in their chosen areas of concentration.

Learning Outcomes

In addition to mastery of biological knowledge and skills, students will:

- Interpret scientific data.
- Demonstrate strong organizational and laboratory skills.
- Define scientific hypotheses and design experiments to test them.
- Work effectively in groups.
- Demonstrate strong writing and oral communication skills.

Potential Occupations

This major prepares students to work in various areas of zoology, such as research or private industry, or to begin graduate school or professional studies. Career opportunities include medical biotechnology, research technician, protective agencies such as shelters and refuges, trainers and handlers, animal-related business, aquatic/marine biologists, exotic animal specialists, and wildlife conservation. It is an appropriate major for students planning to attend medical or veterinary school. Graduates often pursue advanced degrees to carry out basic research or advance into leadership positions in industry. Participation in internships, laboratory, or research opportunities is highly recommended and encouraged by the department to enhance practical training and development.

Additional careers for Zoology majors include, but are not limited to: aquarium and museum curator/director; zookeeper, animal trainer and instructor; science librarian, environmental technician, fish and wildlife technician, veterinary technician/assistant, marine bacteriologist or biologist or ecologist, humane society positions, cytotechnologist, ecologist, fisheries biologist or conservationist, laboratory technician, marketing researcher, medical technologist, park ranger, pharmaceutical sales representative, production supervisor, quality analysis technician in food or pharmaceutical industry, radiation protection technician, research technician, industrial hygienist, wildlife photographer.

Requirements

Effective Fall 2019

To be qualified for graduation, students in the Zoology major must have a minimum grade of C- in each of their biological, physical science, and mathematical courses used to meet requirements for the major. This applies to courses taken as substitutions for meeting these requirements. The minimum scholastic average acceptable for graduation is 2.000 computed only for courses attempted at CSU.

Major in Chemistry
Chemists study the atomic and molecular structure of physical matter and analyze how it changes. More specifically, they investigate how basic atomic and molecular components are combined and can be manipulated to produce useful or improved products. They also develop methods to measure atomic and molecular properties and their interactions, enabling insight into a range of processes from mining to clinical diagnostics. Chemistry majors develop a solid foundation in general chemistry and mathematics followed by course work in organic chemistry, analytical chemistry, physical chemistry, inorganic chemistry, biochemistry, and physics. The curriculum is rounded out by courses in the liberal and communications arts.

Chemistry majors are encouraged to participate in undergraduate research. Ample opportunities exist for undergraduate students to become involved in ground-breaking research in the laboratories of individual faculty members. Students have access to state-of-the-art equipment in faculty laboratories and the Central Instrument Facility including NMR, FTIR, UV/Vis, fluorescence, and mass spectrometers, vacuum lines, x-ray diffractometers and many more. Undergraduate research is strongly encouraged for any student considering a career in chemistry and many students complete supervised research for academic credit.

Learning Outcomes
Chemistry students will:

• Organize, critically evaluate, and present chemical information coherently through oral and written discourse
• Upon obtaining a Bachelor of Science degree in chemistry, demonstrate contemporary skills and knowledge necessary for entry-level positions in chemical industry and allied fields, or for admission to a graduate or professional school
• Demonstrate original research skills, namely the ability to plan investigations allowing them to resolve research questions, conduct such theoretical and/or laboratory experimentation, solve problems arising in such situations and interpret and communicate results

Potential Occupations
Chemists are employed in a vast array of professional fields in private industry, government, and education. Chemists work in research and development, analysis and testing, consulting, industrial quality control and assurance, environmental resource management, and forensics. Principal employers are petrochemical firms, biotechnology firms, consumer chemical firms, environmental testing laboratories, pharmaceutical companies, agricultural companies, governmental regulatory agencies, governmental and educational research laboratories, and manufacturing firms. Many chemists are also engaged in startup companies. Chemistry is also an excellent major for those preparing for careers in veterinary medicine and the health professions. Students whose career goals involve teaching at the secondary school level have
the opportunity to complete the teacher licensure program through the School of Education (http://soe.chhs.colostate.edu/).

Many possible occupations for chemists include, but are not limited to: agricultural chemist, air and water quality analyst, biochemical technician, chemical sales and marketing representative, clinical chemist, consultant, educator, forensic analyst, laboratory technician/bench chemist, materials analyst, patent examiner, pharmaceutical chemist, polymer technician, technical writer, and toxicologist.

### Requirements

**Effective Fall 2020**

Major Completion Map

Distinctive Requirements for Degree Program:

TO PREPARE FOR FIRST SEMESTER: The curriculum for the new American Chemical Society Certified Chemistry major assumes students enter college prepared to take calculus. Entering students who are not prepared to take calculus will need to fulfill pre-calculus requirements in the first semester. CHEM 111 and CHEM 120 require Algebra II as a prerequisite (this prerequisite is met by having Algebra II by test credit, transfer credit, or placement out of MATH 117 and MATH 118 on Math Placement Exam). Earned grades of C (2.000) or better are required in all listed courses for the major in chemistry.

Computer science is about creating innovative solutions to complex, real-world problems. Students in this major study step-by-step computational methods for solving problems by encoding, storing, tracking and transforming information. Computer science is much broader than just programming. It is informed by the theory and architecture of computing devices, and the tools and practices used to design and implement software.

The computer science major at CSU provides students a broad background in the field while simultaneously allowing students to focus on specific areas. In addition to a general computer science degree with the option for a minor in a field of their choice, we offer the following concentrations:

- Artificial Intelligence and Machine Learning
- Computing Systems
- Human-Centered Computing
- Networks and Security
- Software Engineering

The department offers a wide range of specialized senior-level courses where students can explore in depth different areas of computer science including: big data, computer networks, distributed systems, artificial intelligence, machine learning, computational biology / bioinformatics, human-computer interaction, graphics, database systems, compilers, parallel programming, object oriented design, and advanced topics in algorithms and theory of computer science.

Learning Outcomes

Upon completing this program, students will be able to:

- Understand how to use the principles of computing to design and develop software and computing systems.
- Work effectively in teams to develop computational solutions to complex problems.
- Communicate technical ideas effectively in writing and verbally.
- Practice CS in an ethical and socially responsible manner, with an awareness of biases that can result from their indiscriminate use.
- Confidently pursue graduate studies or professional employment in the field of computer science.

Potential Occupations

Our computer science students and graduates are in high demand. Their proven performance attracts annual recruiting visits by industry, government agencies, and research laboratories. Internships are readily available to enhance students’ skills and marketability.

Career opportunities for computer science graduates include:

- Software developer, database programmer, computer systems analyst, network architect, web developer, information security analyst, data scientist, computer and information systems manager, IT project manager, cybersecurity analyst, UX designer, cloud engineer, systems architect, mobile application developer, and educator.

Major in Computer Science, Artificial Intelligence and Machine Learning Concentration

Artificial intelligence (AI) and machine learning (ML) are about creating intelligent systems – systems that perceive and respond to the world around them. AI and ML systems are everywhere, in our cars and smartphones, and businesses of all sizes are investing in these areas.

The AI/ML concentration combines a rigorous computer science degree with coursework in AI, ML, and big data. This concentration also provides students the necessary foundational coursework and skills in math, statistics, and data science.

Learning Outcomes

Upon completing this program, students will be able to:

- Develop AI and ML approaches for complex real-world problems.
- Deploy high-performance computing tools for the analysis of large datasets.
- Use a broad range of AI and ML tools, techniques, and algorithms.
- Apply AI and ML tools in an ethical and socially responsible manner, with an awareness of biases that can result from their indiscriminate use.
- Communicate results of complex analyses verbally and in writing using appropriate visualization techniques.
- Confidently pursue graduate studies or professional employment in AI/ML and computer science.

Potential Occupations

In addition to the career opportunities open to all computer science graduates, the AI/ML concentration opens career paths that include:

- Machine learning engineer, data scientist, business intelligence developer, big data engineer, data mining analyst, natural language processing analyst, computer vision engineer.

### Major in Computer Science, Computer Science Concentration

The Computer Science concentration is a broad computer science program that prepares students for any introductory position in the field. This concentration also allows students to select a research area (http://www.cs.colostate.edu/cstop/csresearch.php) and focus on that topic in their 400-level coursework. Students can also take a breadth focus -- a little bit of everything -- for a broader perspective.

### Major in Computer Science, Computing Systems Concentration

Computing systems are integrated devices that input, output, process, and store data and information. Computing systems encompass a wide range, from simple sensors and hardware components to phones, laptops, desktops, and entire data centers. Computing systems specialists are challenged to provide ever increasing levels of performance from these systems.

The Computing Systems concentration provides students the necessary tools to solve important and demanding systems problems at scale. Students will learn how to design and assess computer systems from a holistic perspective that encompasses distributed and parallel algorithms, big data, systems software, networking, compiler design, and artificial intelligence/machine learning.

Data is our most valuable resource. Large scale data are being generated by programs, sensors, and simulations. Drawing timely and effective insights from these data are at the heart of modern problems in computer science and society in general. The Computing Systems concentration includes courses that teach you how to accomplish this goal, from storing, transporting, organizing, and extracting insights from data to expressing programs that execute in parallel and distributed environments encompassing hundreds of thousands of cores.

### Learning Outcomes

Upon completing this program, students will be able to:

- Design scalable systems for computational and data intensive problems.
- Design distributed and parallel algorithms to analyze large data sets.
- Leverage diverse computing architectures in support of problem solutions.
- Program accelerators/coprocessors (e.g., for deep learning).
- Confidently pursue graduate studies or professional employment in computer systems and computer science.

### Potential Occupations

In addition to the career opportunities open to all computer science graduates, the Computing Systems concentration opens career paths that include:

- Cloud applications designer
- Systems designer
- Data scientist
- Big data analyst
- Compiler designer
- Database specialist
- Supercomputing applications specialist

### Requirements

**Effective Fall 2021**

A minimum grade of C (2.000) is required in CO 150 and in all CS, DSCI, MATH, STAT and departmental Technical Elective courses which are required for graduation.

## Major in Computer Science, Human-Centered Computing Concentration

Human-centered computing (HCC) focuses on developing tools that improve the relationship between people and technology so that people can concentrate on the problem rather than the technology. The ultimate goal of HCC is to make the computer invisible.

Human-centered computing involves designing, developing, and deploying human-centric computer systems. In this concentration students will learn techniques for human-computer interaction using gestures, mobile devices, large surfaces, and virtual environments. Students will also learn how to design and conduct human-subject experiments and understand the role of HCC in developing human-centric artificial intelligence systems. The concentration provides rich interdisciplinary training in computer vision, machine learning, design and psychology.

### Learning Outcomes

Upon completing this program, students will be able to:

- Design interactive systems using state-of-the-art HCC techniques.
- Design and conduct human-subject experiments.
- Build complex 3D worlds for user interaction (e.g., virtual and augmented reality).
- Confidently pursue graduate studies or professional employment in HCC and computer science.

### Potential Occupations

In addition to the career opportunities open to all computer science graduates, the HCC concentration opens career paths that include:

- User experience designer, virtual and augmented reality developer, and human-centric developer for intelligent systems.

### Requirements

**Effective Fall 2021**

A minimum grade of C (2.000) is required in CO 150 and in all CS, DSCI, MATH, STAT, and Technical Elective courses which are required for graduation.

Major Completion Map
Distinctive Requirements for Degree Program:

To prepare for first semester: The curriculum for the Computer Science major assumes students enter college prepared to take calculus. Entering students who are not prepared to take calculus will need to fulfill pre-calculus requirements in the first semester. Those pre-calculus requirements are listed as benchmark courses in Freshman Semester 1 below. All students must maintain a C (2.000) or better in CO 150 and in all CS, DSCI, MATH, and STAT and Technical Elective courses which are required for graduation.

Major in Computer Science, Networks and Security Concentration

Networks connect computers and other devices so they can share information. The Networks and Security concentration involves designing, building, and maintaining networks and protecting them from cyberattacks.

Network and security technology is vitally important to almost every modern field of human endeavor including biology, physics, agriculture, medicine, defense, and more.

There is explosive demand for professionals who can understand the underlying principles of networks and security, incorporate them into products and practices, and provide defensive capabilities against cyber threats.

The Networks and Security concentration provides students core and elective courses on computer networking, systems security (including the latest trends and technologies in cyber-security), ethical hacking, operating systems, databases, and software. Students will develop fundamental skills in security architecture and analysis, cryptography, system vulnerabilities and attack vectors, malware analysis and defense, intrusion detection and protection, network architecture, engineering and network software development. The CSU Cyber-Security Center of Excellence expands upon these course offerings with lab equipment, research topics, and certification opportunities.

Learning Outcomes

Upon completing this program, students will be able to:

- Develop products and technologies that provide network/cyber-security solutions or incorporate these technologies into products that require security or network capabilities.
- Analyze technologies and situations for cyber vulnerabilities to develop improvements to attack and defense methodologies.
- Communicate technical ideas effectively in writing and verbally.
- Confidently pursue graduate studies or professional employment in networks and security and computer science.

Potential Occupations

In addition to the career opportunities open to all computer science graduates, the networks and security concentration opens career paths that include:

Software developer, software architect, network security analyst, software project manager, computer systems security analyst, computer and information systems manager, and R&D jobs for both cyber-security attack and defense.

Employers in a wide range of fields recognize the need for network and cyber-security architecture and implementations within their domains, which creates R&D and management opportunities across a wide job market.

Requirements

Effective Fall 2021

A minimum grade of C (2.000) is required in CO 150 and in all CS, DSCI, MATH, STAT and departmental Technical Elective courses which are required for graduation.

### Major in Computer Science, Software Engineering Concentration

Software engineering involves designing, implementing, and maintaining computer programs. Developing modern software systems requires more than programming skills and core computer science concepts. It requires software engineering skills, which are in high demand in the software industry.

The Software Engineering concentration focuses on the concepts, techniques, and tools necessary for software analysis, design, testing, maintenance, and teamwork. Courses will include hands-on work with the software engineering tools used in industry.

This concentration combines a rigorous computer science degree with courses in software design, software testing, project management, and system analysis and design.

#### Learning Outcomes

Upon completing this program, students will be able to:

- Work effectively in teams to develop computational solutions to complex problems.
- Communicate technical ideas effectively in writing and verbally.
- Confidently pursue graduate studies or professional employment in software engineering and computer science.

#### Potential Occupations

In addition to the career opportunities open to all computer science graduates, the software engineering concentration opens career paths that include:

- Software developer, software architect, full-stack developer, software project manager, database programmer, computer systems analyst, web developer, computer and information systems manager, UX designer, cloud engineer, mobile application developer, and educator.

#### Requirements

**Effective Fall 2021**

A minimum grade of C (2.000) is required in CO 150 and in all CS, CIS, DSCI, MATH, and STAT courses which are required for graduation.

Minor in Bioinformatics

At the intersection of biology and computer science, bioinformatics is the study of applying computational tools to collect and analyze complex biological data such as genomic sequences.

A minor in Bioinformatics will give students interested in biology a foundation in programming that will complement their biology backgrounds. In addition to programming, students will take basic courses in statistics and machine learning, leading up to coursework in bioinformatics. Computer Science has competitive entrance requirements.

Please contact a department advisor for more information.

Requirements

Effective Spring 2022

Students must satisfactorily complete the total credits required for the minor. Minors and interdisciplinary minors require 12 or more upper-division (300- to 400-level) credits.

Additional coursework may be required due to prerequisites.

A minimum grade of a C (2.000) is required in all courses required for the minor.

Minor in Machine Learning

Machine learning (ML) is the science of creating algorithms that learn from data. ML systems are everywhere, from cars and smartphones to various home devices. Businesses of all sizes are investing in ML technology. ML is also ubiquitous across the sciences: Many areas of science generate large amounts of data and rely on ML to assist in making new discoveries in fields ranging from particle physics to medicine.

The ML minor provides students a path that includes introductory and advanced machine learning courses along with the necessary foundational coursework and skills in computing, math, and statistics.

Learning Outcomes

Upon completing this program, students will be able to:

• Develop ML approaches for complex real-world problems.
• Use a broad range of ML tools, techniques, and algorithms.
• Apply ML tools in an ethical and socially responsible manner, with an awareness of biases that can result from their indiscriminate use.
• Communicate results of complex analyses using appropriate visualization techniques.

Computer Science has competitive entrance requirements. Please contact a department advisor for more information.

Major in Mathematics
Mathematics is the science of numbers, shapes, probabilities, and measurements. It is a universal language in which information is stated in the simplest possible form. Mathematics has a dual nature—it is an independent discipline valued for its precision and elegance, and it is an essential source of ideas and techniques for other scientific endeavors.

The undergraduate program is structured to provide a broad liberal arts education in mathematics, a strong set of core courses, and flexibility to choose from a broad range of courses. The liberal arts component requires students to acquire a broad background in communication skills, humanities, social sciences, and natural sciences. The major core focuses on developing students' understanding and appreciation of the mathematical sciences, problem solving skills, and their ability to combine knowledge and skills in productive ways. Core mathematics subjects include calculus and advanced calculus, linear algebra, methods of proof, abstract algebra, computer programming, and statistics.

Four concentrations are available in the program: Actuarial Science, Applied Mathematics, General Mathematics, and Mathematics Education.

Learning Outcomes
Graduates will:

- Obtain a solid background in theoretical mathematics and will be able to participate in mathematical work in a variety of fields or continue on to graduate school.
- Be able to apply a range of mathematical and statistical tools to a diverse set of problems as presented to them in either employment or the pursuit of further education.
- Be capable of describing their mathematical assumptions and results to colleagues.

Accelerated Program
The major in Mathematics, General Mathematics concentration and Mathematics Education concentration, includes an accelerated program option (https://provost.colostate.edu/accelerated-programs/) for students to graduate on a faster schedule. Accelerated Programs typically include 15-16 credits each fall and spring semester for three years, plus 5-6 credits over two to three summer sessions (https://summer.colostate.edu/acceleratedprograms/). Students who enter CSU with prior credit (AP, IB, transfer, etc.) may use applicable courses to further accelerate their graduation. Visit the Office of the Provost website for additional information about Accelerated Programs (https://provost.colostate.edu/accelerated-programs/).

Potential Occupations
The Mathematics major prepares students for a wide variety of occupations in business, industry, government, and education. Actuarial science graduates who have passed the first two professional actuary exams can expect to find positions with excellent entry-level salaries. Applied mathematics graduates continue to find employment
opportunities in government and private industry. Many pursue advanced degrees in mathematics, computational science, or engineering. About one-third of general mathematics graduates continue on to graduate school in mathematics or other disciplines, with the rest finding employment in a large variety of capacities. Education students spend a semester teaching a classroom and have excellent job placement. Participation in internships, volunteer activities, or cooperative education opportunities is highly recommended to enhance practical training and development. Graduates who continue to pursue advanced degrees can attain more responsible positions with the possibility of rising to top professional levels.

Career opportunities include, but are not limited to: applied mathematician, actuary, engineer, statistician, financial analyst/advisor, computer programmer, computer systems analyst, mortgage officer, market analyst, risk analyst, tax auditor, accountant, math educator.

Concentrations

- Actuarial Science Concentration
- Applied Mathematics Concentration
- General Mathematics Concentration
- Mathematics Education Concentration

Major in Mathematics, Actuarial Science Concentration

The Actuarial Science concentration trains students how to use mathematics, statistics, business, and economics to analyze and plan for future situations involving financial uncertainties and risks. This concentration is designed to qualify students to take the first two examinations administered by the Society of Actuaries (https://www.soa.org/member/) and provides the foundation for the remaining examinations.

Requirements

Effective Fall 2021

A minimum grade of C (3.000) is required in all mathematics, statistics, and computer science courses that are required for graduation.

TO PREPARE FOR FIRST SEMESTER: The curriculum for the Major in Mathematics, Actuarial Sciences Concentration assumes students enter college prepared to take calculus. Entering students who are not prepared to take calculus will need to fulfill pre-calculus requirements in the first semester: MATH 117, MATH 118, MATH 124, MATH 125, MATH 126. A minimum grade of C (3.000) is required in all mathematics, statistics, and computer science courses that are required for graduation.

### Major in Mathematics, Applied Mathematics Concentration

The Applied Mathematics concentration prepares students for careers as applied mathematicians working in business, government, and industry. It is recommended that students supplement the core mathematical program with courses in their chosen application area, for example, engineering, public health, finance, electronics, or geology. Course requirements emphasize mathematical foundations as well as the application of mathematics in other disciplines. In particular, students receive training in numerical analysis, mathematical modeling, statistics, and computing, as well as a solid preparation for further study.

#### Requirements

**Major in Mathematics, General Mathematics Concentration**

The General Mathematics concentration is a liberal arts-based program designed to provide a solid foundation in mathematics with the flexibility to explore and develop expertise in other academic fields. Because of its flexibility, this concentration is well suited for students who want to combine mathematics with fields such as business, law, computer science, or statistics.

**Requirements**

**Effective Fall 2020**

A minimum grade of C (2.000) is required in all mathematics, statistics, and computer science courses that are required for graduation.

Major in Physics

Physics is the study of motion, matter, and energy. It is the most fundamental of sciences, and provides the essential underpinning of chemistry, biology, astronomy, and geology. Physicists probe the structure of atomic nuclei, study exotic states of matter that occur at ultra-low temperatures, and develop theories that predict the origin and destiny of the universe. Physics has practical applications to a wide variety of tasks such as fabricating very large scale integrated circuits, producing high efficiency solar cells, and developing nanomachines, high-power lasers, and scanners for imaging activity within the human brain. Fundamental research in physics has led to many important inventions, including the transistor, the computer, the internet, the flat panel display, and the cell phone.

The Physics major begins with an emphasis on fundamentals in the basic sciences and mathematics to provide students with a broad foundation. Subsequent course work is designed to develop analytical and experimental abilities that allow students to solve problems involving the technical applications of physics. The curriculum includes courses on classical mechanics, modern physics, quantum mechanics, electricity and magnetism, and thermal physics. A strong liberal arts program rounds out the major and provides educational breadth. Participation in undergraduate research is strongly encouraged since it enhances practical training and expands employment opportunities, as well as being expected of anyone applying to research-based graduate programs.

Two concentrations are offered: Physics and Applied Physics. The former is the standard concentration, and is recommended for students planning to apply to graduate programs in Physics or related disciplines. The latter requires the student to select a specific "field": there are a variety to choose from, and each has its own menu of associated electives. The Applied Physics concentration is ideal for students who are double-majoring in other technical disciplines, or who anticipate further education towards a career in health professions (including, notably, Medical Physics).

Learning Outcomes

Graduates will:

• Obtain a solid background in experimental physics and basic theoretical physics. This will include a conceptual understanding of mechanics, electromagnetism, many-body physics, and quantum mechanics as applied to important model systems and real systems.

• Have the contemporary skills and knowledge necessary for entry-level positions in a variety of occupations or for admission to graduate or professional schools.

• Be able to carry out experiments on diverse physics phenomena using electrical and optical techniques; analyze data using statistical methods appropriately; identify systematic errors; and relate the results to core physics content at the advanced undergraduate level.

• Be able to communicate the results of experiments and theoretical analyses in writing and orally.

Potential Occupations

Physics majors who go into the workforce directly after graduation use their training in a variety of settings. The primary employers for our graduates have been large aerospace/defense and electronics companies, as well as software firms and smaller high-tech companies. In addition to the more obvious jobs in those settings, such as computer programming, quality control, and electronics design, our students have also been hired in training and sales capacities. High school teaching is a possibility: there are several pathways for students with undergraduate Physics degrees to obtain teaching credentials. Physics graduates possess excellent mathematical and analytical skills that are useful in business and finance as well.

Our majors have gone on to research-based graduate programs in disciplines including Physics, Applied Physics, Applied Mathematics, Atmospheric Science, and Quantitative Biology. Those earning graduate degrees can work in college teaching and at industrial, government, and academic research labs and reach the highest professional levels.

Health Physics and Medical Physics are two less-known career paths that offer great opportunities for students interested in the direct application of physics to human well-being. The former is concerned with protecting people from dangers associated with ionizing radiation, while the latter involves working with x-ray machines and radioisotopes in clinical settings. Both require Master's degrees in the discipline, and a Physics major is the preferred undergraduate preparation.

Concentrations

• Applied Physics Concentration

• Physics Concentration

Major in Physics, Applied Physics Concentration

The Applied Physics concentration combines fundamental course work in physics with a selection of courses in a related field. Seven fields are available:

• The Electronics, Semiconductors, and Optics field and the Materials and Fluids field are designed for students interested in rapidly changing technology or in areas that overlap the boundaries of traditional engineering disciplines.

• The Computers field provides a foundation for the application of modern computer technology to problems in physics, the development of new types of computers, and jobs in computer programming.

• The Chemistry field combines thorough knowledge of both chemistry and physics, which is useful in such interdisciplinary areas as...
With this concentration, it is also possible for students to design a custom field (in consultation with departmental advisors) to meet their specific needs.

### Requirements

**Effective Fall 2021**

1. For students who change majors from Electrical Engineering or are double-majoring in Electrical Engineering, please see advisor for possible substitutions.
2. CHEM 301 or CO 301B are recommended. Other courses in AUCC Category 2 may be accepted if they are taken prior to declaring the Physics major or are taken to meet requirements of another major.
3. A minimum of 6 credits must be 300-, 400-, or 500-level.
Select enough elective credits to bring the program total to a minimum of 120 credits, of which at least 42 must be upper-division (300-, 400-level, or 500-level).

**Major Completion Map**

**Distinctive Requirements for Degree Program:**

Required PH courses above the 100-Level (with the exception of PH 293 and, if there is sufficient demand, PH 314) are offered only Fall or Spring.

**Major in Physics, Physics Concentration**

The Physics concentration provides a broad background in physics that serves as a base for later specialization, either in graduate school or on the job. It is designed for those seeking greater insight into physics and an introduction to more advanced topics and methods. Students who obtain a degree in Physics with the Physics concentration are prepared for a career in industry or government, or for advanced study at the graduate level.

### Major Completion Map

**Distinctive Requirements for Degree Program:**

Required PH courses above the 100-Level (with the exception of PH 293 and, if there is sufficient demand, PH 314) are offered only Fall or Spring, not both. A grade of C- or better is required in all courses used to meet requirements of the major, except for unrestricted electives and courses taken to satisfy All-University Core Curriculum (AUCC) categories 3B, 3C, 3D, and 3E. Note that PH 327 may be replaced by six credits from the Mathematics and Statistics Electives List.

Minor in Physics

Most technical fields require some background in physics. A minor in Physics can provide students with an increased understanding of the foundations of their chosen major. For students majoring in Computer Science and Mathematics, a minor in Physics can offer experience in applying the skills acquired in their major to concrete physical problems.

Requirements

Effective Fall 2018

Students must satisfactorily complete the total credits required for the minor. Minors and interdisciplinary minors require 12 or more upper-division (300- to 400-level) credits.

Additional coursework may be required due to prerequisites.

A minimum grade of C- is required in all courses applying toward the minor in physics.

Major in Psychology

Psychology is one of the most popular and versatile majors. The major emphasizes a strong background in the natural sciences (e.g., mathematics, chemistry, biology, statistics, human physiology), writing, and research.

Electives enable students to obtain a second major or minor in a field of interest or take pre-professional courses and graduate with:

1. A combination of courses and experiences to qualify for semiprofessional jobs in psychological settings or closely-related fields (e.g., addictions counseling);
2. A combination of courses providing a background for careers outside of psychology (e.g., human resources);
3. Pre-professional courses for potential admittance into professional training programs (e.g., medicine, occupational therapy, veterinary medicine); and/or
4. A complement of courses for potential admittance into psychology graduate school programs. Advanced degrees are often a prerequisite for professional careers in psychology.

Learning Outcomes

Students will:

- Demonstrate understanding of the basic theories and principles of behavior.
- Demonstrate knowledge of psychological principles and concepts across several content areas.
- Demonstrate knowledge and appreciation of the scientific methods used in psychological research by engaging in analytical and critical thinking.

Accelerated Program

The major in Psychology, General Psychology concentration, includes an accelerated program option (https://provost.colostate.edu/accelerated-programs/) for students to graduate on a faster schedule. Accelerated Programs typically include 15-16 credits each fall and spring semester for three years, plus 6-9 credits over two to three summer sessions (https://summer.colostate.edu/acceleratedprograms/). Students who enter CSU with prior credit (AP, IB, transfer, etc.) may use applicable courses to further accelerate their graduation. Visit the Office of the Provost for more information.
website for additional information about Accelerated Programs (https://provost.colostate.edu/accelerated-programs/).

**Potential Occupations**

A B.S. degree in Psychology prepares students for a variety of career opportunities. Because of the strong science orientation, students develop a number of important skills required in a broad range of occupations. Skills such as written and oral communication, cooperation, analytical and critical thinking, and a background in the sciences demonstrate versatility and an ability to pursue a variety of career paths. Participating in paid or volunteer work, internships, research, study abroad and experiential education opportunities are highly recommended to increase students’ employment opportunities.

Possible career opportunities include, but are not limited to: addictions counselor, human services worker, case worker, mental health services worker, probation officer, community relations officer, educator, program developer/administrator, human resources administrator, labor relations representative, compensation and benefits administrator, public relations specialist/special events administrator, advertising producer/writer, account services representative, media representative, market researcher, government program administrator, business manager, buying agent, sales representative, real estate broker, industrial/organizational consultant, psychometrician, neuropsychologist (with advanced degree), cognitive neuroscientist (with advanced degree), engineering psychologist (with advanced degree), clinical psychologist (with advance degree), family therapist (with advanced degree), lawyer (with advanced degree), occupational therapist (with advanced degree), veterinarian (with advanced degree) or physician (with advanced degree).

**Concentrations**

Major in Psychology, General Psychology Concentration

Students who prefer a broad view of the field often choose the General Psychology concentration. Students in this concentration can tailor the psychology lecture/lab pair and upper division psychology elective requirements to fit their interests. Students with an interest in the applied applications of psychology are encouraged to participate in internships, while those with an interest in pursuing an advanced degree in graduate school are encouraged to seek research experience with a faculty member.

Major in Psychology, Industrial/Organizational Concentration

The Industrial/Organizational concentration prepares students to move into the workforce with a bachelor’s degree or to pursue graduate education in industrial/organizational psychology. Students in this concentration take seminars that focus on psychology in the workplace. These seminars cover topics such as leadership, work-life balance, training, and motivation. Students are strongly encouraged to participate in experiential education opportunities to enhance their marketability in the workforce, such as internships. Students are also encouraged to work as research assistants in order to strengthen their graduate school applications.

Major in Psychology, Mind, Brain, and Behavior Concentration

The Mind, Brain, and Behavior Concentration prepares students to be competitive candidates for graduate programs in cognitive psychology, cognitive neuroscience, behavioral neuroscience, and sensation and perception. Many students considering a career in medicine or an allied health profession also choose to complete this concentration. Students acquire a stronger science and quantitative background compared to the other concentrations in psychology. Students are encouraged to participate as undergraduate research assistants and work with a faculty member on a research project.

Major in Statistics

Statistics is the science of modeling, summarizing, and analyzing data. Statisticians help people produce trustworthy data, analyze the data, and present the results in a useful manner. Statisticians work with people from other professional backgrounds to solve practical problems. They provide crucial guidance in determining what information is reliable and which predictions can be trusted. An exciting aspect of the field is the diversity of areas where statistical methods are used; this is one reason for continuing strong demand for well-trained statisticians. With the popularity of big data and the focus on quantitative analysis in many fields, there will continue to be a high demand for graduates with a statistics major or minor. Students who succeed in the field of statistics typically have strong quantitative skills, analytical minds, and like to help other people solve problems.

Learning Outcomes

Students completing this program will be able to:

• Conceptualize analytical questions in terms of a model,
• Apply their knowledge of the core set of statistical methods,
• Perform data analysis using statistical software,
• Interpret and communicate statistical results,
• Either attend graduate school in statistics or find professional employment in a statistics field upon completion of a statistics major.

Potential Occupations

Statisticians find employment in a wide range of industries including medicine (evaluating new medicines and medical treatments), computing, business, market research, natural resources, government, industrial quality control, social science research, and more. Almost every industry has a statistician or a group of statisticians somewhere in the organization. Graduate school is also an option after graduation. Many of our undergraduate majors have continued on to graduate school in statistics, either at CSU or other universities. Almost all statistics majors are able to find work in this field and/or gain entrance to graduate school after successfully completing a statistics degree.
To learn more about a Major in Statistics please see our Advising page (https://statistics.colostate.edu/advising/), or contact us at stats@stat.colostate.edu.

Minor in Statistics

Students with a minor in Statistics will receive training in statistical methods, tailored to the aspect of statistics that they choose to emphasize. The minor has 12 credits of electives, giving lots of flexibility in course choices. Statistical skills are in demand across a wide range of disciplines. A minor in statistics is a valuable complement to many majors in the physical, biological, Earth, social and human sciences. Statistical skills are also in high demand in most private industries and government organizations.

If you are interested a minor in Statistics, please see our advising page (https://statistics.colostate.edu/advising/) or contact our department at stats@stat.colostate.edu.

Requirements

Effective Fall 2020

Students must satisfactorily complete the total credits required for the minor. Minors and interdisciplinary minors require 12 or more upper-division (300- to 400-level) credits.

Additional coursework may be required due to prerequisites.

A minimum grade of C must be achieved in all STAT courses required for the minor in statistics.

Graduate Certificate in Theory and Applications of Regression Models

The Graduate Certificate in Theory and Applications of Regression covers applications of regression analysis, generalized regression models, probability and mathematical statistics and other topics in statistical analysis. The focus is on the practical methods in regression analysis, understanding patterns and structure in data, and the explanation of findings.

Distinctive Requirements for Certificate: GSLL 3095 and GSLL 3096 (or STAT 500) are required skills courses and should be taken first. GSLL 3095 is intended not only as a review, but also as instruction in using the math skills in a statistical context. It does not replace the math prerequisites indicated. GSLL 3096 covers use of SAS and R programming. STAT 500 is a 1-credit version of GSLL 3096.

*This certificate may have courses in common with other graduate certificates. A student may earn more than one certificate, but a given course may be counted only in one certificate.

Master of Applied Statistics, Plan C, Data Science Specialization

The Master of Applied Statistics, Plan C, Data Science Specialization emphasizes practical methods in statistics and data science, focusing on applications and computational aspects rather than theory. The goal of this degree is to enable students to start working as data scientists in business, industry, or government immediately after graduation. Students receive a strong background in statistical and business computing while completing this degree. Full time students complete the M.A.S. degree in less than a year; however, this degree may also be completed part time, either online or on campus. Students who succeed in the field of data science typically have strong quantitative skills, analytical minds, and like to help other people solve problems.

College Programs

A concern for health and the diseases of animals and humans provides the unifying theme for the undergraduate, professional, and graduate programs of the College of Veterinary Medicine and Biomedical Sciences (CVMBS)—a manifestation of the concept of One Health. The College combines teaching, research, and public service activities in basic biomedical disciplines such as anatomy, neurobiology, physiology, microbiology, pathology, and radiological health sciences, with applied disciplines such as clinical veterinary medicine and surgery, diagnostic imaging, radiology, clinical laboratory sciences, epidemiology, and environmental health sciences. Graduates of the College in either the veterinary sciences or the biomedical sciences serve society in the broadest sense: they represent the concept that there is but “one medicine” supporting “one health” with human and animal health intimately interrelated within their environments.

Major Courses of Study

The CVMBS offers undergraduate, professional, and graduate courses of study. There are two undergraduate programs leading to the Bachelor of Science, with majors in Biomedical Sciences and Neuroscience in partnership with the College of Natural Sciences. The Bachelor of Science degree requires a minimum of 120 credits with a minimum of 42 credits in upper-division courses. The four-year professional veterinary medical program leads to the Doctor of Veterinary Medicine degree; students in this program typically complete a baccalaureate degree prior to program admission. Graduate studies in each of the four departments of the college lead to Master of Science and Doctor of Philosophy degrees with selected professional master’s programs serving emerging needs in society and through practitioner skill development.

Education Abroad

Education abroad programs are available to students in the CVMBS. Because the knowledge of at least one other culture is valuable in understanding our own, students are strongly encouraged to study outside the United States. Students interested in education abroad should plan far in advance by discussing opportunities with their academic advisor and by visiting the Office of International Programs (http://international.colostate.edu) in Laurel Hall.

Continuing and Distance Education
The CVMBS supports the veterinary profession by offering continuing education courses that enable practicing veterinarians to obtain new medical information and meet the Colorado Veterinary Practice Act continuing education requirements for re-licensure. The College shares responsibility for continuing education and maintains close liaison with the American Veterinary Medical Association (AVMA), the Colorado Veterinary Medical Association (CVMA), the Colorado Board of Veterinary Medicine, and the Western Interstate Commission for Higher Education (WICHE). Innovative programs like Health Professions preparation—for students finishing essential courses to prepare to pursue health professions—are offered through CSU Online.

Graduate Programs
Programs leading to the Master of Science and Doctor of Philosophy degrees are offered in all departments of the College.

Students with Bachelor of Science or Doctor of Veterinary Medicine (DVM) degrees, or well-qualified students who are currently pursuing veterinary medicine degrees, are eligible to study for advanced degrees in the Departments of Biomedical Sciences; Clinical Sciences; Environmental and Radiological Health Sciences; and Microbiology, Immunology, and Pathology.

The CVMBS and the College of Business have created a combined five-year DVM-MBA program of study that can result in earning both the Master of Business Administration (MBA) degree and the DVM degree. Applicants to the DVM program are encouraged to consider extending their veterinary education to include a one-year start to an MBA degree. After successfully completing the first year of the MBA program, students will be guaranteed admission to the first year of the DVM program and will be expected to complete the remaining MBA course requirements concurrently with the first two years of the DVM curriculum. This program was undertaken to improve training of our students in veterinary practice management, business and economics beyond what is currently offered as core content within the DVM curriculum.

Combining the expertise from public/environmental health and veterinary medicine and partnering with the Colorado School of Public Health (http://publichealth.ucdenver.edu), the College has created a five-year DVM-MPH program which provides specialty training in veterinary medicine and public health. Students spend the first year in the Master of Public Health (MPH) program, years two and three in the DVM and MPH programs, and then years four and five focusing on completing the DVM requirements. Given the threats to public health from zoonotic diseases, changing ecosystems due to climate, and enhanced need for health professionals versed in the interplay of human, animal and environmental factors, DVM-MPH graduates bring a critical skill set to bear on issues of significant public impact.

The CVMBS and the Department of Animal Sciences within the College of Agricultural Sciences have partnered in developing a DVM-MS-Animal Sciences five-year combined degree, aimed at offering robust training in livestock production, animal health, industry and economics to future livestock veterinarians. Students will be optimally equipped to provide animal health services, advise individuals within production units, provide leadership within professional organizations, and contribute to knowledge development through research. Students complete graduate coursework in Animal Sciences and initiate clinical/field research in the first year, then complete research requirements during the subsequent four years of DVM training.

There is a national need for veterinarians who can serve as the bridge between research and all aspects of animal health and welfare. The College has developed a seven-year DVM-PhD program that integrates clinical and research training to provide a dual degree to selected candidates. Numerous outstanding research opportunities exist in diverse areas that complement DVM training, including cancer biology, infectious disease, neurosciences, reproductive biology, epidemiology, orthopedic sciences, environmental health and toxicology. The typical DVM/PhD program progresses as follows:

- basic graduate study and laboratory rotations (year one)
- first two years of DVM training plus electives and graduate work (years two and three)
- exclusive research work in the PhD program (years four and five)
- completion of the DVM training (years six and seven)

For detailed information about CVMBS graduate programs, view the CVMBS (https://vetmedbiosci.colostate.edu/degree-programs/graduate/) (http://csu-cvmbs.colostate.edu/academics/Pages/default.aspx) website. Information on DVM combined degrees may be viewed on the DVM Program (https://vetmedbiosci.colostate.edu/dvm) website.

Interdepartmental Program
Doctor of Veterinary Medicine (DVM)
A four-year professional Doctor of Veterinary Medicine (DVM) program is offered annually to approximately 148 students. Each year, approximately 138 students are admitted to the DVM program located on the main CSU campus in Fort Collins, Colorado. Additionally up to 12 students are admitted to the CSU-University of Alaska Fairbanks (UAF) 2+2 DVM Program. These students complete the first two years of the four-year program in Fairbanks, Alaska, and join the larger cohort to complete years three and four in Fort Collins. Students in the 2+2 Program graduate with a DVM degree from CSU, and enjoy unique opportunities at UAF in small animal sports medicine, rural outreach, conservation, and wildlife medicine.

Because the number of applicants exceeds the number of students who can be admitted to any class, the members of the DVM Admissions Committee for the CVMBS carefully evaluate each applicant in a holistic manner to recommend those best qualified. Information concerning the academic program which leads to the DVM degree may be found in the Graduate and Professional Bulletin or online (https://vetmedbiosci.colostate.edu/dvm/admission-requirements)/.

The full course of study requires four years beyond completion of the pre-veterinary requirements. While exceptional students may complete pre-veterinary requirements in two to three years and then be accepted into the DVM Program, it is much more common that students complete a baccalaureate degree or graduate degree, followed by four years in the professional program.

Pre-Veterinary Training for the Doctor of Veterinary Medicine Program
Students may complete pre-professional (pre-veterinary) training at any accredited institution whether these courses are part of a regularly offered baccalaureate program or whether the courses are taken as “stand alone” choices independent of a degree program. Courses must be substantially equivalent in subject content and level as offered for pre-veterinary students at CSU.
Inquiries regarding equivalent or substitute courses that may be taken specifically to meet pre-veterinary requirements should be directed to DVMAdmissions@colostate.edu. There is also a form for requests (Prerequisite Substitute Course Request (https://vetmedbiosci.colostate.edu/dvm/admission-requirements/)), which is submitted to DVMAdmissions@colostate.edu.

The minimum course requirements for admission to the DVM program, exclusive of electives, are:

- Arts, Humanities, Behavioral and Social Sciences – at least 12 semester credits. (The required credits for English composition explicit in most programs of study as all university requirements—see category that follows—do not fulfill these requirements.)
- Biological Sciences – at least three semester credits in genetics and a laboratory associated with a biological science course.
- Chemistry – at least three semester credits in biochemistry (requiring organic chemistry as a prerequisite) and a laboratory associated with a chemistry course.
- English Composition – at least three semester credits.
- English, Language, and Literature – at least three semester credits.
- Physics – at least four semester credits with laboratory.
- Statistics – at least three semester credits (upper-division course preferred).

In addition to these minimum course requirements, 30 credits of elective courses are required. Highly recommended courses include anatomy, cell biology, developmental biology, histology, immunology, microbiology, nutrition, physiology, and computer science. These courses will enhance the student's preparation for the DVM program.

The pre-veterinary requirements include a total of 60 semester credits that must be completed prior to admission to the DVM program. Students may apply prior to completing all prerequisite requirements; however, in order to assure the most competitive application, one is encouraged to have the majority of the prerequisites completed by the time of application. The large majority of students will complete the pre-veterinary requirements as part of a baccalaureate program. Exceptional students may apply for admission to the DVM program when only the pre-veterinary requirements are met.

Students who wish to pursue pre-professional veterinary medicine training (sufficient to meet minimum requirements to apply to the CSU DVM Program) through courses offered at CSU as part of their undergraduate degree program will find detailed information online (https://vetmedbiosci.colostate.edu/dvm/admission-requirements/).

**Combined Degree Programs**

Colorado State University offers four combined degree programs, pairing the DVM with a graduate degree. These include the DVM-MBA, DVM-MPH, DVM-MS-Animal Sciences, and DVM-PhD. Please see “Graduate Programs” above for detailed information.

**Food Animal Veterinary Career Incentive Program**

There are many vacancies and numerous career opportunities in all sectors of private livestock practice, including mixed animal practice and specialty practices in dairy cattle, beef cow-calf, beef feedlots, sheep, small ruminants and swine. There are also many opportunities in public practice including food safety and inspection, communicable disease management, and regulatory veterinary medicine. Many practitioners and producers have found it difficult to recruit new graduates into food and fiber animal practice, especially in rural communities. Reduced veterinary participation in food and fiber production animal medicine may contribute to increased vulnerability of livestock industries to emerging infectious diseases, exotic and zoonotic diseases, public health risks from food safety and quality problems, lowered public confidence in animal agricultural products, as well as threats to the national economy. Thus, the overarching goal of the Food Animal Veterinary Career Incentive Program (FAVCIP) is to create a sustainable source of future veterinarians for underserved disciplines and geographic regions central to the future of safe and successful food and fiber animal production. This program includes a plan of academic work, experience, and mentoring that encompasses undergraduate and veterinary medical education and meets specific needs of animal agriculture through a cooperative venture of the CVMBS and the Department of Animal Sciences in the College of Agricultural Sciences. It should be noted that DVM students who do not complete the FAVCIP may still focus coursework and clinical experiences on livestock medicine, especially in years three and four.

Undergraduate students with a strong interest in the discipline will be encouraged to follow the FAVCIP curriculum and program requirements (https://vetmedbiosci.colostate.edu/dvm/special-degree-programs/) as they complete their Bachelor of Science in Animal Science at CSU.

**Doctor of Veterinary Medicine**

A four-year professional program in Veterinary Medicine is offered annually to approximately 154 students. Each year, approximately 142 students are admitted to the DVM program located on the main CSU campus in Fort Collins, Colorado. Additionally, up to 14 students are admitted to the CSU-University of Alaska Fairbanks (UAF) 2+2 DVM Program, completing the first 2 years of the 4-year program in Fairbanks, Alaska, and joining the larger cohort to complete years 3 and 4 in Fort Collins. These students graduate with a DVM degree from CSU and enjoy unique opportunities at UAF in small animal sports medicine, rural outreach, conservation, and wildlife medicine. Because the number of applicants exceeds the number of students who can be admitted to any class, the members of the Admissions Committee for the CVMBS carefully evaluate each applicant to recommend those best qualified. - Demonstrate critical thinking and the ability to analyze scientific data to solve complex problems as an individual and as a member of a team
- Demonstrate effective organization, leadership, and laboratory skills
- Demonstrate strong writing and oral communication skills necessary to communicate scientific knowledge to a range of audiences

### Potential Occupations
A Bachelor of Science degree in Biomedical Sciences will provide students with a variety of opportunities for further study or employment in the broad area of biomedical sciences. The coursework is designed to prepare students for health-related graduate and professional programs. Post-graduate opportunities will include additional studies in specialty areas of physiology such as neuroscience, reproductive endocrinology, cardiopulmonary, and patho-physiology. Employment opportunities can be found in government at the local, state, and national levels; research in a variety of settings such as university, industry, and private laboratories; education; administration and management; and industry such as biotechnology, pharmaceuticals, and medical devices. Students will be exposed to skill sets which are necessary in a competitive, ever changing job market.

### Concentrations
- Anatomy and Physiology
- Environmental Public Health
- Microbiology and Infectious Disease

### Major in Biomedical Sciences, Anatomy and Physiology Concentration
This program prepares students for a wide variety of opportunities which have a basis in cellular and molecular biology, human/animal anatomy and physiology. In addition to enrolling in required courses, students will have opportunities to engage in elective courses and laboratory research in specialty areas of endocrinology, pharmacology, pathophysiology, neurophysiology, reproductive physiology, and cardiopulmonary physiology. In this process, students are able to tailor their educational experiences to specific career objectives. The curriculum will prepare graduates to pursue further studies in professional schools for medicine, veterinary medicine, pharmacy, dentistry, and optometry, as well as other programs such as nursing, physician assistant and physical therapy. The Anatomy and Physiology concentration will also prepare students for graduate studies in animal and human health sciences as well as for employment in a variety of innovative and developing fields in biotechnology.

A minimum of 167 credits are required to complete this program.

### Major in Biomedical Sciences
The interdisciplinary Biomedical Science major (BMS) is designed to provide students in-depth training in the applied life sciences. The program prepares students for employment by public sector and government agencies, private industry, academic institutions, as well as graduate study in medicine, veterinary medicine, and related biomedical and health fields. Students will begin their studies with foundational science courses including biology, physics, general chemistry, organic chemistry, math, and statistics, and then choose an area of concentration (anatomy and physiology, environmental public health or microbiology and infectious disease) to tailor their educational experiences to specific career objectives.
The basic science curriculum meets many requirements for entrance into professional schools. Experiential learning opportunities are encouraged and could include participating in laboratory research, teaching/tutoring in selected courses, volunteer experiences and leadership positions within student club(s), study abroad, internships, and honors curriculum. These opportunities are encouraged with the student's interests and career goals as the focus.

Distinctive Requirements for Degree Program:

To Declare Major: competitive entry controls required and capped enrollment in place. Please contact Director of Student Success in the CVMBS Student Success Center for more information.

To Prepare for First Semester: The curriculum for the anatomy and physiology concentration assumes students enter college prepared to take calculus. Entering students who are not prepared to take calculus will need to fulfill pre-calculus requirements in the first semester. Those pre-calculus requirements are listed as benchmark courses in Freshman Semester 1 below. LIFE 102 requires high school chemistry as a prerequisite; CHEM 111 requires Algebra II as a prerequisite (this prerequisite is met by having Algebra II by test credit, transfer credit, or placement out of MATH 117 and MATH 118 on Math Placement Exam).

1 See Concentration Elective notes directly above the course list.

2 Select enough free electives at student’s discretion to complete degree program of 120 credits. Enough upper division (300- and 400-level) credits must be taken to bring total number of upper division credits to 42.

Major in Biomedical Sciences, Environmental Public Health Concentration

Environmental Public Health is a branch of public health that studies how biological, chemical, and physical factors in natural and built environments impact human health and disease. Students will learn how to help prevent injuries and disease by managing environmental hazards and promoting healthier air, water, soil, homes, workplaces, and communities. The EPH concentration within the Biomedical Sciences major is one of only 28 programs nationwide to be fully accredited by the standards of the National Environmental Health Science and Protection Accreditation Council, and the only such program in Colorado.

Students begin their studies with foundational science courses in biology, physics, general chemistry, organic chemistry, biochemistry, microbiology, physiology, math, and statistics, and then use these basic sciences as tools to solve environmental public health problems. Students are involved in actual and simulated field projects with data gathering and analysis, characterization of environmental public health problems, evaluation of alternative solutions, and presentation of results in written and oral formats. All Environmental Public Health students complete a professional internship for academic credit with a private sector company or public health agency.

Special Opportunities:

- A capstone internship which allows students to put their coursework into practice under the guidance of a qualified mentor. A pre-internship seminar course prepares students in the essentials of resume & cover letter writing, interviewing, networking and securing the internship.
- Access to exclusive internships for students from accredited EPH programs, such as National Environmental Public Health Internship Program (https://www.neha.org/professional-development/students/internships/) and the US Public Health Service JRCOSTEP (https://www.usphs.gov/students/).
- BS & MPH dual degree program which offers the opportunity to earn your bachelor's degree and the Master of Public Health degree (https://publichealth.colostate.edu/dual-degree/bs-mph/) in 5 years.
- BS & MS dual degree program which offers the opportunity to earn your bachelor's degree and the Master of Science in Radiological Health, Health Physics specialization (https://vetmedbiosci.colostate.edu/degree-programs/graduate/ms-radiological-health/health-physics/) in 5 years.

Potential Occupations
Occasions of Environmental Public Health alumni include, but are not limited to: environmental public health specialist, industrial hygienist, toxicologist, epidemiologist, air quality analyst, water quality manager, pollution prevention specialist, hazardous and solid waste specialist, occupational safety specialist, radiation safety officer, disaster assistance team leader, emergency manager, environmental consultant, and health educator. In addition, Environmental Public Health is excellent preparation for entry into medical school, veterinary school and other health-related professional programs as well as masters and PhD programs in a variety of scientific disciplines.

Major in Biomedical Sciences, Microbiology and Infectious Disease Concentration

Microbiology is the study of organisms, many of which are too small to be seen with the naked eye, including fungi, protists, and bacteria, as well as acellular agents such as viruses and prions. Microbiology emerged as a distinct science in the late nineteenth century, with the discovery that microorganisms are the cause of many infectious diseases, and that they play essential roles in ecosystems (such as the microbiome) and in industrial processes. Much work in this field is directed toward the cure, control, or eradication of disease in humans and animals, as well as understanding how microbes support health and life. Genetically engineered microorganisms can also be used for the production of improved foods, new drugs and vaccines, and for removing toxic wastes and spills from the environment. Unfortunately, some microbes have received considerable attention as potential agents of bioterrorism and biowarfare, and consequently much work is being done to counter such threats.

Students completing the undergraduate Biomedical Sciences degree program with a concentration in Microbiology and Infectious Diseases acquire knowledge and laboratory skills in the structure, physiology, genetics, pathogenicity, ecology, and taxonomy of microorganisms, as well as immunological techniques. Students engage in authentic hypothesis-driven research problems in inquiry-based laboratory courses. Required courses in biological sciences, chemistry, physics, and mathematics support the major. Ample opportunities exist for undergraduates to obtain laboratory research experience and many student researchers have presented at conferences and have been awarded research grants or fellowships.

A Bachelor of Science degree in Biomedical Sciences with a concentration in Microbiology and Infectious Disease prepares graduates well for continued education in a professional or graduate degree program or for employment in the field.

Learning Outcomes

- **Core Knowledge**: Students will apply and integrate the fundamentals of chemistry, microbial biology, and biochemistry and key principles from the following five core areas of the discipline: immunology, bacteriology, virology, microbial physiology, and microbial genetics.

- **Relevance/Impact**: Students will demonstrate an awareness of issues at the forefront of the discipline and will evaluate the important interaction between microbes and society, from their beneficial use in industrial, biotechnological, and clinical applications to their role as etiologic agents of infectious disease in humans and animals.

- **Communication Skills**: Students will assimilate factual and conceptual information and effectively communicate disciplinary knowledge to both science literate and general audiences through written or oral presentations.

- **Laboratory Skills**: Students will demonstrate proficiency using microbiological and immunological laboratory techniques employed in clinical, industrial, and research laboratories, and will be able to explain the principles behind the procedures, employ mathematical
computations, properly execute the procedures, interpret the results correctly, and analyze the results to draw a conclusion.

Potential Occupations

The curriculum, with the proper selection of departmental electives, meets the requirements for entrance into most professional programs in veterinary and human medicine, and is ideal preparation for students desiring a career as a veterinarian, physician, physician assistant, pharmacist, medical laboratory scientist, optometrist, or dentist. The degree also prepares students for graduate (PhD or MS) studies in various biological sciences, and also provides students with the knowledge and skills to go directly into a career. Career opportunities will continue to grow because microbiology is at the center of complex issues facing our world today, as well as at the forefront of fast-paced innovation and development. Employment opportunities exist in biotechnology (vaccine and therapeutics, pharmaceutical, food, beverage, and medical device industries); government public health agencies (CDC, FDA, and state and municipal health departments); and primary research institutions, such as universities.

1 CHEM 343 may count as a Concentration Elective for students who select organic chemistry Group B in the Sophomore year.

2 Select enough elective credits to bring the program total to a minimum of 120 credits, of which at least 42 must be upper-division (300- to 400-level).

### Majors Completion Map

#### Distinctive Requirements for Degree Program:

To Declare Major: competitive entry controls required and capped enrollment in place. Please contact Director of Student Success in the CVMBS Student Success Center for more information.

To prepare for first semester: The curriculum for the microbiology and infectious disease concentration assumes students enter college prepared to take MATH 124. Entering students who are not prepared to take MATH 124 will need to prerequisite requirements in the first semester. Those requirements are listed as benchmark courses in Freshman Semester 1 below. LIFE 102 requires high school chemistry as a prerequisite; CHEM 111 requires Algebra II as a prerequisite (this prerequisite is met by having Algebra II by test credit, transfer credit, or placement out of MATH 117 and MATH 118 on Math Placement Exam).

Molecular, Cellular and Integrative Neurosciences Special Academic Unit

Assistant Professor Phillip L. Quirk, Undergraduate Program Director
Office in:
Physiology 228

The Molecular, Cellular and Integrative Neuroscience Special Academic Unit offers an interdisciplinary undergraduate degree program with faculty in five different colleges and ten departments. Two different concentrations are offered as programs of study: Behavioral and Cognitive Neuroscience and Cell and Molecular Neuroscience. Both concentrations have a strong foundation in mathematics, physics, chemistry, and biological sciences that utilize a common core for the first two years, differing in only a single course for each concentration, thus making it easy to switch between concentrations if a student’s interest changes during the first two years. Both concentrations require completion of an undergraduate thesis, providing significant opportunities for experiential learning in research laboratories in which they work closely with faculty, and which sometimes lead to authorship of original publications. Electives allow students in one concentration to acquire breadth and depth in the other area, if desired.

Learning Outcomes

Students will obtain:

• A command of basic concepts in chemistry, physics, biology, biochemistry, molecular biology, and cellular biology as well as a more in-depth understanding of the structure and function of the nervous system.
• An understanding of how the brain works, from molecules to the mind, and how its function becomes disrupted in diseases and following brain injury.
• The ability to critically analyze and present the methods, results, and conclusions of scientific papers in the current neuroscience literature, and orally present technical material in a clear and comprehensible form.

• Experience in the use of a variety of laboratory techniques, ability to critically interpret experimental results, and ability to design new experiments.
• The ability to perform original research or to critically analyze published work to advance an understanding of a specific area of neuroscience by preparing and defending an undergraduate thesis.

Potential Occupations

Possible career opportunities for students with a B.S. in Neuroscience include, but are not limited to: research technician, medical or clinical lab technologist, production/quality assurance lab technician, pharmaceutical research worker or salesperson, human resource specialist, neurotoxicology technician, teacher, writer, and research analyst. Many Neuroscience majors go to professional schools in medicine, veterinary medicine, or health sciences, or into graduate programs encompassing virtually all areas of biomedical sciences and psychology.

Concentrations

• Behavioral and Cognitive Neuroscience Concentration
• Cell and Molecular Neuroscience Concentration

Major in Neuroscience, Behavioral and Cognitive Neuroscience Concentration

Overview

The Behavioral and Cognitive Neuroscience concentration integrates an understanding of neuroanatomy with the mechanisms of sensation/perception and learning/memory, generally applied to human behavior. Its focus is at the functional level of neuronal systems and networks. It differs from classical psychology in providing a more in-depth cellular and molecular basis for understanding behavior and neurological disorders that influence behavior. Graduates with this concentration are well prepared for many graduate and professional degree programs in health professions, as well as for careers in a variety of clinical settings, non-profit disease oriented foundations, and private sector organizations in either research-related or human resource service-related positions.

**Major in Neuroscience, Cell and Molecular Neuroscience Concentration**

The Cell and Molecular Neuroscience (CMN) concentration integrates neuroanatomy with the cellular and molecular basis of nervous system function. Its focus is to understand cellular processes in neurons and glia at the molecular level. It differs from degree programs in biochemistry or biomedical sciences by its specific focus on the nervous system. Required courses in microbiology, immunology, biochemistry, and advanced cell biology provide an excellent background for students interested in pursuing careers in medicine or biomedical research through graduate or professional schools. However, graduates with this concentration should also be well qualified for any positions in academia, government or the private sector where knowledge of cell and molecular processes is required, whether or not it is applied to the nervous system.

Students in the CMN Concentration with strong research interests and a GPA of 3.250 or above may qualify for early entry into the M.S. degree program in Biochemistry while pursuing the B.S. degree program in Neuroscience. Early entry requires that students have identified a faculty member willing to mentor them in their laboratory research for the M.S. degree and that they have obtained permission from the Neuroscience program and the Department of Biochemistry and Molecular Biology.
to apply to the graduate school for this. Students can apply to the
graduate program (allowing them access to courses above those at the
500 level) during the semester that they complete 90 or more credits.
Students will be moved from undergraduate to graduate standing the
semester after they complete 120 or more credits. At that time they
begin paying graduate tuition and fees and will lose all undergraduate
institutional and scholarship aid, but they can qualify for many graduate
assistantships and fellowships. Both degrees can be awarded during
the same semester but the M.S. degree cannot be awarded before
completing the requirements of the B.S. degree.

### Minor in Biomedical Sciences

The minor in Biomedical Sciences provides students with a useful complement to majors in Animal Science, Biochemistry, Biological Science, Health and Exercise Science, Human Development and Family Studies, Neuroscience, Psychology, and other biomedical science areas. The program offers a variety of courses which serve to broaden the background of students pursuing professional careers in biomedical sciences, human and veterinary medicine, and a variety of health-related disciplines. Candidates begin the program with a course in physiology.

**Requirements**

**Effective Fall 2018**

Students must satisfactorily complete the total credits required for the minor. Minors and interdisciplinary minors require 12 or more upper-division (300- to 400-level) credits.
Additional coursework may be required due to prerequisites.

A minimum grade of C (2.000) in either BMS 300 or BMS 360 will be required for those students who are seeking to graduate with a minor in biomedial sciences.

**Master of Science in Biomedical Sciences, Plan A**

The traditional Master of Science in Biomedical Sciences, Plan A (http://csu-cvmbs.colostate.edu/academics/bms/Pages/master-science-biomedical-sciences.aspx) is a research-based program and typically takes two to three years to complete. While less comprehensive than a Ph.D., students complete a meaningful and original research project, which culminates in writing and defending a thesis. This option is designed for motivated students who have the ability to develop critical thinking skills and conduct research in one of the three primary areas of study in our department (https://vetmedbiosci.colostate.edu/degree-programs/graduate/ms-biomedical-sciences/traditional-bms/): cardiovascular physiology, reproductive physiology, and neurobiology.

Master of Science in Biomedical Sciences, Plan B, Reproductive Technology Specialization

The Master of Science in Biomedical Sciences, Plan B, Reproductive Technology Specialization (http://csu-cvmbs.colostate.edu/academics/bms/Pages/one-year-masters-reproductive-technologies.aspx) is a one-year, non-thesis study of Assisted Reproductive Technologies (ART), culminating in a research project or internship. It provides students with in-depth laboratory training in in vitro embryo production based on a bovine model, including techniques such as in vitro fertilization, embryo and semen cryopreservation and vitrification, embryo biopsy and micromanipulation, and basic maintenance of an assisted reproduction laboratory and all associated equipment. The curriculum prepares students for careers in applied reproduction, especially careers in human or bovine embryology, as well as application to professional or graduate school. Professor Wayne Jensen, Department Head

Faculty in the Department of Clinical Sciences participate in training professional veterinary medical students and graduate students. For the veterinary medical student curriculum, students are instructed in the diagnosis, medical and surgical treatment, and prevention and management of domestic and exotic animal diseases. Through field service clinical experience, students receive on-the-farm training in livestock herd health management and production medicine. Our major clinical training center is the Veterinary Teaching Hospital, which
operates state-of-the-art primary and referral services in all areas of small animal medicine and surgery, equine, and agricultural animal clinical care.

**Undergraduate**
No undergraduate major is offered.

**Graduate**

**Graduate Programs in Clinical Sciences**

Graduate programs offered in the department lead to Master of Science or Doctor of Philosophy degrees. Particular research focus areas within the department include epidemiology, musculoskeletal diseases, cancer biology, cardiovascular diseases, regenerative medicine, and infectious diseases of animals.

Minor in Environmental Health

Environmental Health is a branch of public health that studies how biological, chemical, and physical factors in natural and built environments impact human health and disease. Students will learn how to help prevent injuries and disease by managing environmental hazards and promoting healthier air, water, soil, homes, workplaces, and communities. A minor in Environmental Health (EH) will benefit students majoring in a variety of biosciences who want to leverage and integrate EH skill sets into their professional endeavors (e.g., medicine, dentistry, law, research, industry) as well as those students interested in career options in environmental public health, private sector occupational health and safety, environmental toxicology, and environmental epidemiology.

Requirements

Effective Spring 2021

Students must satisfactorily complete the total credits required for the minor. Minors and interdisciplinary minors require 12 or more upper-division (300- to 400-level) credits.

Additional coursework may be required due to prerequisites.

**Graduate Certificate in Radiological and Nuclear Safety**

The Department of Environmental and Radiological Health Sciences (https://vetmedbiosci.colostate.edu/erhs/)

This certificate allows opportunities for students and professionals (e.g., employed by the military or in the nuclear sector) who are interested in obtaining basic knowledge of radiological and nuclear safety for specific applications in their workplace to further their education and training in their individual sub-fields without having to complete the formal requirements of a comprehensive graduate degree. Completing the certificate allows the students to have this credential appear on their transcripts, which may serve as confirmation for their employer of their professional training. Also, credits earned in the course of completing the graduate certificate may be applied towards fulfillment of the requirements for a graduate degree at a later date.

**Effective Fall 2019**

Additional coursework may be required due to prerequisites.
